

Cleaning Out Your Old Data and Devices

Over the years, many of us have accumulated hard drives, devices, online accounts, and other mediums that store information that are out there and unused. Outside of the key information you kept stored on purpose for long term use or retrieval, it is good to periodically assess and dispose of unneeded storage media and information. These days, information may be split between physical items you have in your possession and online accounts or cloud-based storage. This month's guide will provide some details on how to manage your information and data, as well as how to safely dispose of those pieces you do not need any longer.

Cleaning up Online Accounts and Cloud Storage:

Clean your social media presence: It may have been years since you logged into an old social media platform that you no longer use. If that's the case, consider removing any personally identifiable information like address, date of birth, and other less sensitive details from the account. Furthermore, consider closing the account entirely if you don't think you'll have reason to use it anymore. The fewer places you have personal information stored online, the better!

Keep your social media presence clean: On social media accounts that you still use, minimize the amount of personal information that you display. In particular, minimize how visible your information is to any untrusted individuals. This is especially important as those who are not approved to be your friend or contact on the platform will be less likely to view your personal information. Most sites offer this as a privacy option in the settings for your account.

Close old shopping and rewards accounts: If you do not plan on shopping on a particular site, please consider removing any payment or personal information and closing the account. If you rarely shop on a web site, consider if it's necessary to maintain a user account. Most retail sites have a guest account option for temporary use and lessens the likelihood of your information being saved.

Cloud storage and files: Many of us use cloud storage services of some sort, whether just for storing our photos from our devices, or for backing up and storing important files. Consider clearing out data and information periodically from these storage accounts that you will not need access to in the future.

Physical Storage – Digital and Paper:

Hard disk drives, Solid State Drives, and USB flash drives: When you are looking to get rid of an old computer (or other device with a hard drive) that you don't use anymore, you should properly clean your data off the device before disposing of it or selling/donating it. You will want to ensure you properly move those family photos, important records, and everything else you want to keep onto a newer device or a disk/thumb

drive before beginning the process of cleaning the data off. Next, you will want to either physically destroy the drive or perform the proper process of overwriting by using a utility to permanently erase the data. For physical destruction of drives, consider utilizing a paid service to properly destroy the device. For overwriting or permanent erasure of data, there are many software utilities available to perform these operations, some of which may be included with your operating system.

Smartphones, Tablets, Gaming Consoles, and other devices: Perform a “hard reset” which will bring the device back to factory settings and remove your data securely. Always ensure no accounts are permanently logged in on the device. You can consult the maker of the device when seeking guidance on how to locate this setting or utility for that particular make and model.

The information provided in the MS-ISAC Monthly Cybersecurity Tips Newsletter is intended to increase the security awareness of an organization's end users and to help them behave in a more secure manner within their work environment. While some of the tips may relate to maintaining a home computer, the increased awareness is intended to help improve the organization's overall cyber security posture. This is especially critical if employees access their work network from their home computer. Organizations have permission and are encouraged to brand and redistribute this newsletter in whole for educational, non-commercial purposes.
