DAVIDSON COUNTY SOIL CONSERVATION DISTRICT

Strategic Goals

1. **By 2013, Davidson County residents and visitors will experience improved water quality in Davidson County streams as evidenced by:**
 - percent decrease in 303D designated streams
 - percent decrease in sedimentation
 - percent increase in stream bank protection projects
 - percent of watersheds evaluated that maintained or improved baseline levels of the Environmental Integrity Index (water, sediment and recreational quality, aquatic habitat and physical integrity levels)

2. **By 2013, Soil Conservation District customers will be aware and have the information and/or resources to better manage their natural resources as evidenced by:**
 - percent increase in requests for service
 - percent of customers who say they have the information and/or resources necessary to better manage their natural resources
 - percent of students who say they know more about natural resource conservation as a result of attending a classroom informational session

3. **By 2013, Davidson County will experience growth that incorporates proper natural resource management (aesthetics, etc.) as evidenced by:**
 - percent increase in developers who utilize mapping products to plan new developments
 - percent increase in value of property in comparison to like cities

DAVIDSON COUNTY SOIL CONSERVATION DISTRICT
