

GUIDELINES – MWS RELINING OF MAINS

The following guidelines have been developed:

- If a property is vacant at the time of the relining, no tap will be left.
- If there is a dwelling on the property that is not presently connected to service, a tap will be left.
- It is suggested that if there is a question about the status of the service, a plumber should do a rod inspection to assure service is active.
- Demolition occurred outside of a one (1) year period and the main has been relined without a service connection, MWS will re-instate tap with payment of tap fee.
- If the demolition is less than one year, the main has been relined without a service connection, MWS will re-instate tap without payment of tap fee.
