

# Appendix 5: Comparative Analytical Statistics

Budget comparisons over time may be more meaningful when adjusted to real (inflation-adjusted) or per capita terms. This table presents statistical information that can be used to adjust annual numbers for such comparisons.

GDP Price Index data reflects prices in the domestic economy as a whole. State & Local data reflects the price of goods purchased by state & local governments (not specifically Metro). CPI data reflects the price of a market basket of goods and services bought by urban consumers.

The GDP Price Index and GDP State & Local Government Purchases reflect base year change from 2012. The percentage change in prices from one year to another is the difference in indices for those years divided by the index for the earlier year. Increases must be compounded, not simply averaged, across multiple years.
