CPPW Youth Risk Behavior Survey 2010

Students completed a self-administered, anonymous, 35-item questionnaire. Survey procedures were designed to protect the privacy of students by allowing for anonymous and voluntary participation. Local parental permission procedures were followed before survey administration. The Youth Risk Behavior Survey (YRBS) is one component of the Youth Risk Behavior Surveillance System developed by the Centers for Disease Control and Prevention in collaboration with representatives from state and local departments of education and health, other federal agencies, and national education and health organizations. The results from this abbreviated version of the YRBS presented here measure behaviors in four categories:

1. Tobacco use
2. Body Weight
3. Dietary behaviors
4. Physical activity.

The Youth Risk Behavior Survey has been conducted periodically in Nashville for more than 20 years. This particular iteration of the survey was done as part of the Communities Putting Prevention to Work initiative. The 2010 Youth Risk Behavior Survey (YRBS) was completed by 1,734 students in 16 public high schools in Nashville-Davidson County, Tennessee during the fall of 2010. The school response rate was 100%, the student response rate was 76%, and the overall response rate was 76%. The results are representative of all public school students in grades 9-12. The weighted demographic characteristics of the sample are as follows:

Female 49.4%	9th grade 30.8%	Non-Hispanic Black 49.8%
Male 50.6%	10th grade 26.7%	Hispanic/Latino 13.7%
	11th grade 21.8%	Non-Hispanic White 32.0%
	12th grade 20.5%	All other races 2.3%
		Other 0.1%
		Multiple races 2.2%

The YRBS also measures self-reported height and weight to allow calculation of body mass index for assessment of overweight and obesity. More information about the Youth Risk Behavior Surveillance System can be obtained from <http://www.cdc.gov/yrbss>.

Below are two sets of tables provided to the Metro Public Health Department by the Centers for Disease Control and Prevention (CDC) for the 2010 CPPW Youth Risk Behavior Survey. First are the summary tables. These tables include information that can be extrapolated from the overall YRBS survey by age, grade, and race/ethnicity for males, females, and the total sample. These tables also present measures that were calculated (i.e., body mass index) from the data gathered on this survey.

The subsequent set, the detail tables portray the questions from the survey as they were presented to the students along with the distribution of the responses. Both the number and percent of students in each response category are presented by age, grade and race/ethnicity overall followed by similar tables for male and female respondents respectively.

Tobacco

Tobacco use in some form was reported by almost 1 in 5 Davidson County high school students. Nearly half have experimented with cigarette smoking, and over 12% of the students surveyed reported smoking a whole cigarette before they were 13 years old. While cigarettes are the most common form of tobacco used, 3.8% of students reported that they used chewing tobacco, snuff or dip in the month prior to the survey, and 14.7% reported smoking cigars, cigarillos, or little cigars in the same time period.

- 19.4% of students reported using some kind of tobacco product in the past 30 days
- 41.6% of students reported that they had tried cigarette smoking at some point
- Most common age to initiate smoking was found to be between 13 and 14 years old
- 12.8% of students smoked cigarettes in the past 30 days
- 3.9% reported that they smoked cigarettes every day in the past month
- Less than half of the students who smoked during the past year reported that they had considered quitting
- 14.7% reported smoking cigars or cigarillos in the past month

Weight and Dietary Behaviors

While nearly a quarter of high school students reported that they perceive themselves to be at least slightly overweight, in actuality, nearly one-third were found to be either overweight or obese as determined by BMI. Bearing this in mind, it might be encouraging

that over 40% of students say they are trying to lose some weight, but many of them may not be approaching this in a healthy manner as indicated by reports of fasting and the use diet pills and laxatives.

- 23.5% of students perceive themselves to be slightly or very overweight
- 17.8% of students were determined to be overweight
- 14.9% of students were determined to be obese
- 40.7% are trying to lose weight
- 13.2% reported not eating for a 24-hour period to lose weight or keep from gaining weight
- 3.7% used diet pills to lose weight or keep from gaining weight in the past month
- 4.2% took laxatives to lose weight or keep from gaining weight in the past month

Physical Activity

Indicators of daily physical activity and participation in team sports are encouraging. However, approximately 1 in 5 students report watching 4 or more hours of television a day with similar results found for playing 4 or more hours of video daily. The latter two indicators reflect the sedentary nature of many local high school students lives.

- 14.3% of students reported no physical activity in the past week
- 24.9% reported participating in some kind of physical activity daily
- 22.2% watch 4 or more hours of television a day
- 20.2% play 4 or more hours of video games a day
- 55.2% played at least 1 teams sport in the past year
