# I. INTRODUCTION

## WHAT IS REVIEWED:

### IN A HISTORIC LANDMARK OVERLAY

- *New construction (primary and secondary structures)*
- *Additions – increased footprint, height or building envelope of an existing structure*
- *Demolition (in whole or in part)*
- *Relocation of structures*
- *Construction of appurtenances (with the exception of portable storage buildings less than 100 square feet)*
- *Signage*
- *Repairs and Alterations to existing structures*
- *Setback Determinations*

### IN A HISTORIC PRESERVATION OVERLAY

- *New construction (primary and secondary structures)*
- *Additions – increased footprint, height or building envelope of an existing structure*
- *Demolition (full or in part)*
- *Relocation of structures*
- *Construction of appurtenances (with the exception of portable storage buildings less than 100 square feet)*
- *Signage*
- *Repairs and Alterations to existing structures*
- *Setback Determinations*

## THE NEIGHBORHOOD CONSERVATION ZONING OVERLAY

Please also see *MHZC Hand Book*.

Neighborhoods in more than two thousand towns in the United States use historic zoning as a tool to protect their unique architectural characters. There are quantifiable reasons for historic zoning: it gives neighborhoods greater control over development; it can stabilize property values; it decreases the risk of investing in one’s house; it promotes heritage tourism; it protects viable urban housing stock; it preserves natural resources by conserving building materials. And there are less quantifiable, but equally important, reasons for conservation zoning -- it protects our past for future generations, it nurtures a sense of community, and it provides a sense of place.

Historic zoning overlays are **locally** designated and administered by the Metropolitan Historic Zoning Commission (MHZC), an agency of the Metropolitan Government of Nashville and Davidson County. Historic zoning overlays are applied in addition to the base or land-use zoning of an area. *Historic zoning overlays do not impact use.*

Like the National Register of Historic Places, neighborhood conservation zoning honors an area’s historical significance. With that recognition, certain exterior work on buildings—new construction, additions, demolition, and relocation—is reviewed to ensure that the neighborhood’s special character is preserved.

There are three types of historic zoning overlays: historic preservation, neighborhood conservation and historic landmarks. In addition to the projects reviewed in a neighborhood conservation zoning overlay, historic preservation and historic landmark overlays also review exterior alterations to existing buildings -- like replacing siding or installing a fence. Overlays with historic preservation or historic landmark zoning are not more historically significant than those with neighborhood conservation zoning; rather, the MHZC with neighborhood input and direction of the Council member determined that this overlay is most compatible with the goals of the neighborhood and the MHZC.

# I. INTRODUCTION

## WHAT ARE THE DESIGN GUIDELINES?

The Metropolitan Historic Zoning Commission (MHZC) is the architectural review board that reviews applications for work on properties within historic zoning overlay districts. Its nine members, appointed by the mayor, include representatives from zoning districts, the Metropolitan Planning Commission, the Metropolitan Historical Commission, architect(s) and others. Design review is administered according to a set of design guidelines. The guidelines are criteria and standards, developed jointly by the MHZC and the residents of the neighborhood, which are used in determining the architectural compatibility of proposed projects. The guidelines provide direction for project applicants and ensure that the decisions of the MHZC are not arbitrary or based on anyone's personal taste.

The guidelines protect the neighborhood from new construction or additions not in character with the neighborhood and from the loss of architecturally or historically important buildings.

By state and local legislation, design guidelines for historic overlays must be in accordance with the *Secretary of the Interior's Standards for the Treatment of Historic Properties*—criteria developed by the National Park Service and used by private and public preservation organizations throughout the country. (Please see I.B.)

*IN A NEIGHBORHOOD CONSERVATION OVERLAY (NCZO) (also B&B Homestays)*

- *New construction (primary and secondary structures)*
- *Additions – increased footprint, height or building envelope of an existing structure*
- *Demolition (in whole or in part)*
- *Relocation of structures*
- *Setback Determinations*

*WHAT IS NOT REVIEWED IN AN NCZO*

- *Work that cannot be seen from the public right-of-way (not including alleys). To avoid a possible violation, the project should be evaluated by staff for assurance that a Preservation Permit is not necessary.*
- *Temporary Structures are ones that are erected for a period of 90 days or less and does not have permanent foundations.*
- *Portable buildings are those that are no larger than 10' x 10', do not have permanent foundations, designed and used primarily for the storage of household goods, personal items and other materials, are used on a limited basis and are not hooked up to utilities.*
- *Temporary banners/ signage*
- *Temporary construction trailers*
- *Painting of wood*

## I. INTRODUCTION

### PURPOSE OF THE DESIGN GUIDELINES

Within the zoning ordinance, “historic zoning” is used as the general term for Nashville’s three types of zoning overlay districts applicable to historic properties: historic preservation, neighborhood conservation, and historic landmark. The references to historic zoning in the ordinance and design guidelines are to be understood as neighborhood conservation zoning overlay, or simply conservation zoning.

- A. Design guidelines are criteria and standards which the Metropolitan Historic Zoning Commission must consider in determining the appropriateness of proposed work within a neighborhood conservation zoning district. Appropriateness of work must be determined in order to accomplish the goals of historic and neighborhood conservation zoning, as outlined in Article IX (Historic Zoning Regulations), Metropolitan Comprehensive Zoning Ordinance:
1. To preserve and protect the historical and/or architectural value of buildings or other structures;
  2. To regulate exterior design, arrangement, texture, and materials proposed to be used within the historic district to ensure compatibility;
  3. To create an aesthetic appearance which complements the historic buildings or other structures;
  4. To foster civic beauty;
  5. To strengthen the local economy; and
  6. To promote the use of historic districts for the education, pleasure, and welfare of the present and future citizens of Nashville and Davidson County.

## I. INTRODUCTION

B. *By state law, all design guidelines for neighborhood conservation zoning overlays must comply with the Secretary of the Interior's Standards for Treatment of Historic Properties:*

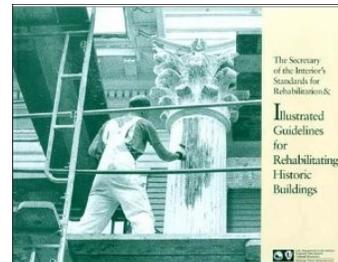

1. *A property shall be used for its historic purpose or be placed in a new use that requires minimal changes to the defining characteristics of the building and its site and environment.*
2. *The historic character of a property shall be retained and preserved. The removal of historic materials or alteration of features and spaces that characterize a property shall be avoided.*
3. *Each property shall be recognized as a physical record of its time, place, and use. Changes that create a false sense of historical development, such as adding conjectural features or architectural elements from other buildings, shall not be undertaken.*
4. *Most properties change over time; those changes that have acquired historical significance in their own right shall be retained and preserved.*
5. *Distinctive features, finishes, and construction techniques or examples of craftsmanship that characterize a property shall be preserved.*
6. *Deteriorated historic features shall be repaired rather than replaced. Where the severity of deterioration requires replacement of a distinctive feature, the new feature shall match the old in design, color, texture, and other visual qualities and, where possible, materials. Replacement of missing features shall be substantiated by documentary, physical, or pictorial evidence.*
7. *Chemical or physical treatments, such as sandblasting, that cause damage to historic materials shall not be used. The surface cleaning of structures, if appropriate, shall be undertaken using the gentlest means necessary.*
8. *Significant archeological resources affected by a project shall be protected and preserved. If such resources must be disturbed, mitigation measures shall be undertaken.*
9. *New additions, exterior alterations, or related new construction shall not destroy historic materials that characterize the property. The new work shall be differentiated from the old and shall be compatible with the massing, size, scale, and architectural features to protect the historic integrity of the property and its environment.*
10. *New additions and adjacent or related new construction shall be undertaken in such a manner that if removed in the future, the essential form and integrity of the historic property and its environment would be unimpaired.*

*The full set of Secretary of Interior*

*Standards may be found online at*

## I. INTRODUCTION

### A SHORT HISTORY OF LOCKLAND SPRINGS—EAST END

Present-day Lockeland Springs - East End is on land which was a part of North Carolina's western territory. These lands were granted, in 640 acre tracts, to veterans of the Revolutionary War as payment for services and to encourage western settlement. They Pernell obtained the land on which present-day East End is located in June of 1784. The Lockeland Springs area was acquired two years later by Daniel Williams. These lands changed hands often early-on, but all owners used them for agricultural purposes.

The City of Edgefield, incorporated in 1868, is where the first dense residential development on the east side of the Cumberland River occurred. As Nashville's central business district developed, pressure to expand housing east of Edgefield grew. In 1873, Nicholas Hobson, Edgefield resident and a president of the Bank of Nashville, sold fifteen acres of his farmland in present-day East End to Thomas Stratton. Still countryside, the land was then bought by the East Edgefield Land Company, which by 1875 had laid out 218 parcels between Woodland, Shelby, North 10th and North 14th Streets. The area was called East End because it was located on the eastern boundary of Edgefield's city limits.

Residential development in Lockeland Springs occurred later than in East End. Soon after purchase in 1786, Daniel Williams built the first known structure in the area -- a log house located near a hillside spring. Lockeland School now stands on this site. In 1800, Williams' entire land grant was sold to Colonel Robert Weakley. Ten years later, Weakley built a mansion on the site of the log house. Lockeland Mansion was named for the colonel's wife, Jane Locke, the daughter of General Matthew Locke of Salisbury, North Carolina. Weakley was a member of the Tennessee Constitutional Convention, and subsequently served in both the state legislature and state senate, and as a member of Congress. In 1889, part of Weakley's land was bought by James Richardson, a prominent but ailing Nashville businessman, who determined that the waters of the Lockeland spring had curative powers. At the 1904 Louisiana Purchase Exposition in St. Louis, the water received a grand prize for its mineral composition and "salubrious quality." The spring was later acquired by the Howe Bottling Company and its water was sold in Nashville until the 1940s. The Lockeland Mansion was purchased in 1939 by the City of

## I. INTRODUCTION

Nashville, which demolished it and built the school.

In addition to the large acreage associated with the Lockeland estate, the Lindsley family owned land in present day Lockeland Springs. In the 1840s, Adrien V. S. Lindsley built the Italianate style Springside Mansion on what is now Lindsley Park Drive. A Union supporter, Lindsley permitted his estate to serve as an unofficial headquarters for generals George Thomas and James Wilson during the Civil War.

Beginning in 1887, and continuing thru 1902, the owners of both the Lockeland and Springside estates began to subdivide and sell off their land holdings. The subsequent homeplaces of John A. McEwen, M. T. Stratton, and C. F. Ordway were the namesakes for several streets in the neighborhood. Porter Pike (leading to Alexander James Porter's ca. 1800 -1840 Riverwood Mansion), was renamed Vaughn's Pike before taking the name Eastland Avenue in 1904. Finally, in 1925, the square block bounded by Woodland, Holly, 15th and 16th Streets -- the Springside Mansion site -- was subdivided for development. The house was demolished in 1933.

In the same ways that modern suburban developments would not be possible without automobiles, development in Lockeland Springs - East End was dependent on the installation, by 1890, of electric streetcar lines linking East Nashville to the central business district across the river. One streetcar line ran down Shelby Avenue; the other followed Woodland Street east, then north on North 16th, and east again on Eastland. A third streetcar ran along Gallatin Pike. The Woodland Street (1886) and Sparkman (Shelby) Street (1909) bridges facilitated access. Prior to this time, only the wealthy could afford to live in the country and make the daily commute from their estates to downtown. Streetcars gave the large middle class the opportunity to buy their own house-in-the-country on a quarter acre lot, away from the smoke and congestion of the city.

In 1905, the Lockeland Springs and East End area was annexed to the city. In the same year, following default on a loan by the Edgefield Land Company, the Nashville Board of Parks acquired the land which was developed as Shelby Park.

Lockeland Springs - East End is characterized by local variations on the architectural styles popular throughout the country between about 1880 and 1940.

## **A SHORT HISTORY, continued**

The earliest houses, south of Woodland Street, illustrate modest Italianate and Queen Anne characteristics. As development progressed north and northeastward, Classical Revival details are apparent on the many cottages commonly referred to in Nashville as Turn-of-the-Century. Bungalows and romantic English Cottages completed the development of the neighborhood to the north, and on vacant lots which remained throughout the area. During this time, the neighborhood was home to broom and cigar factories, grocery stores and other retail shops housed in commercial structures at periodic intersections, and several still-standing churches. The suburban "motorized" Holly Street Fire Hall, built in 1913, was the first of its kind in Nashville. The 1900 census counted hundreds of neighborhood residents, including railroad officials, a cotton merchant, school teachers, grocery clerks, bank clerks, and others.

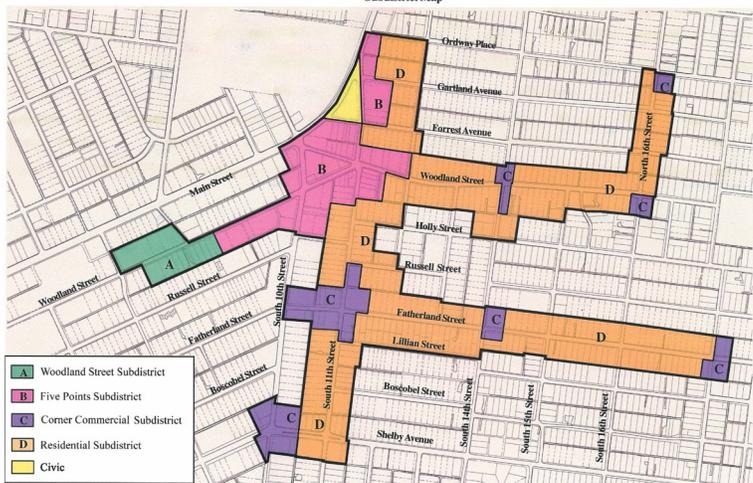

In December of 1981, a portion of Lockeland Springs - East End was listed in the National Register of Historic Places as the East Nashville Historic District. The area is significant as an intact late 19th and early 20th century streetcar suburb with a high concentration of well-preserved homes illustrating the architectural styles -- Eastlake, Queen Anne, Classical Revival, Bungalow, and English Cottage, and others popular among the Nashville middle class between about 1880 and 1945.

# BOUNDARIES OF OVERLAY & REDEVELOPMENT AREA

Lockeland Springs - East End Neighborhood Conservation Zoning Overlay

## II. NEW CONSTRUCTION AND ADDITIONS

Turn of the Century

Queen Anne Cottage

Craftsman

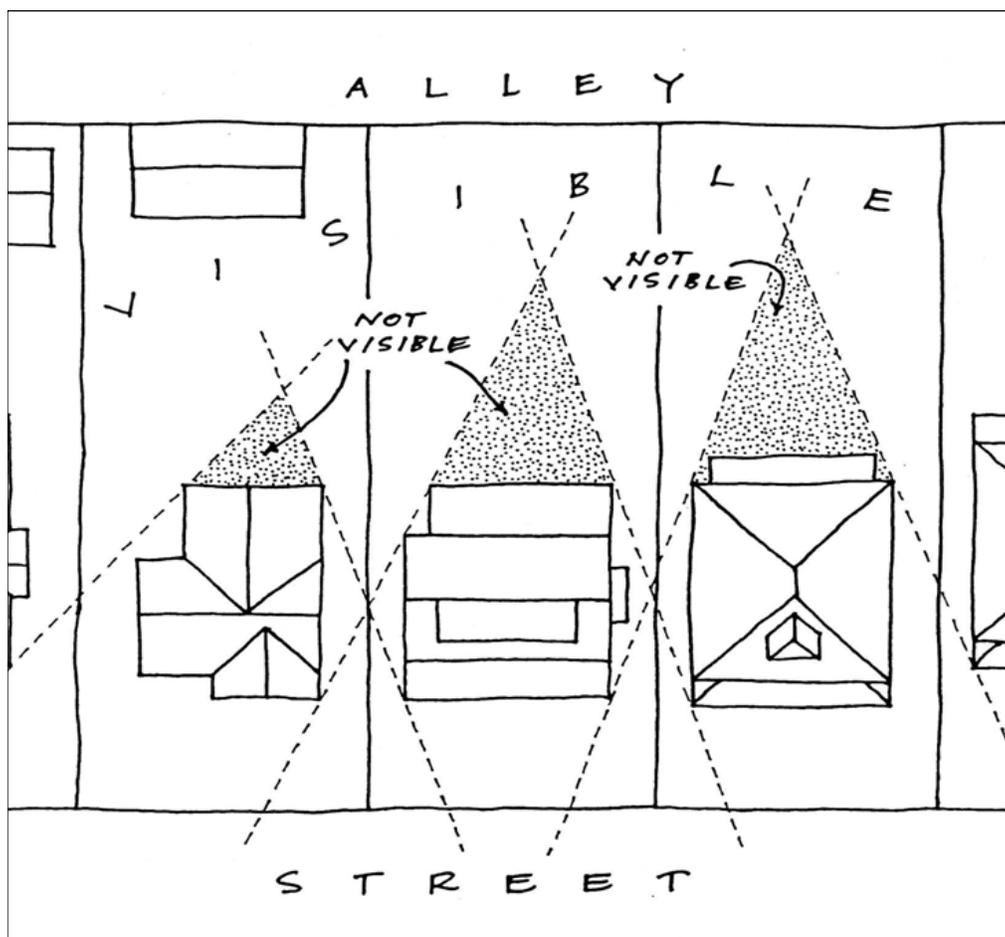

*Italicized sections of the guidelines contain interpretive information that is meant to make the guidelines easier to understand; they are not part of the guidelines themselves. Illustrations are intended only to provide example buildings and circumstances. It is important to remember that every building is different and what may be appropriate for one building or site may not be appropriate for another.*

### A. PRINCIPLES

1. These guidelines shall apply only to the exteriors of buildings and to portions of proposed structures that would be visible from public rights-of-way.

*For the purposes of neighborhood conservation zoning, alleys are not considered to be public rights-of-way.*

*New free-standing buildings less than 100 square feet in area and that do not have a foundation and are located at the rear of a property, are not required to comply with the design guidelines.*

*Image to the right shows the area in which new construction would not require a Preservation Permit. All construction outside of the area will be reviewed.*

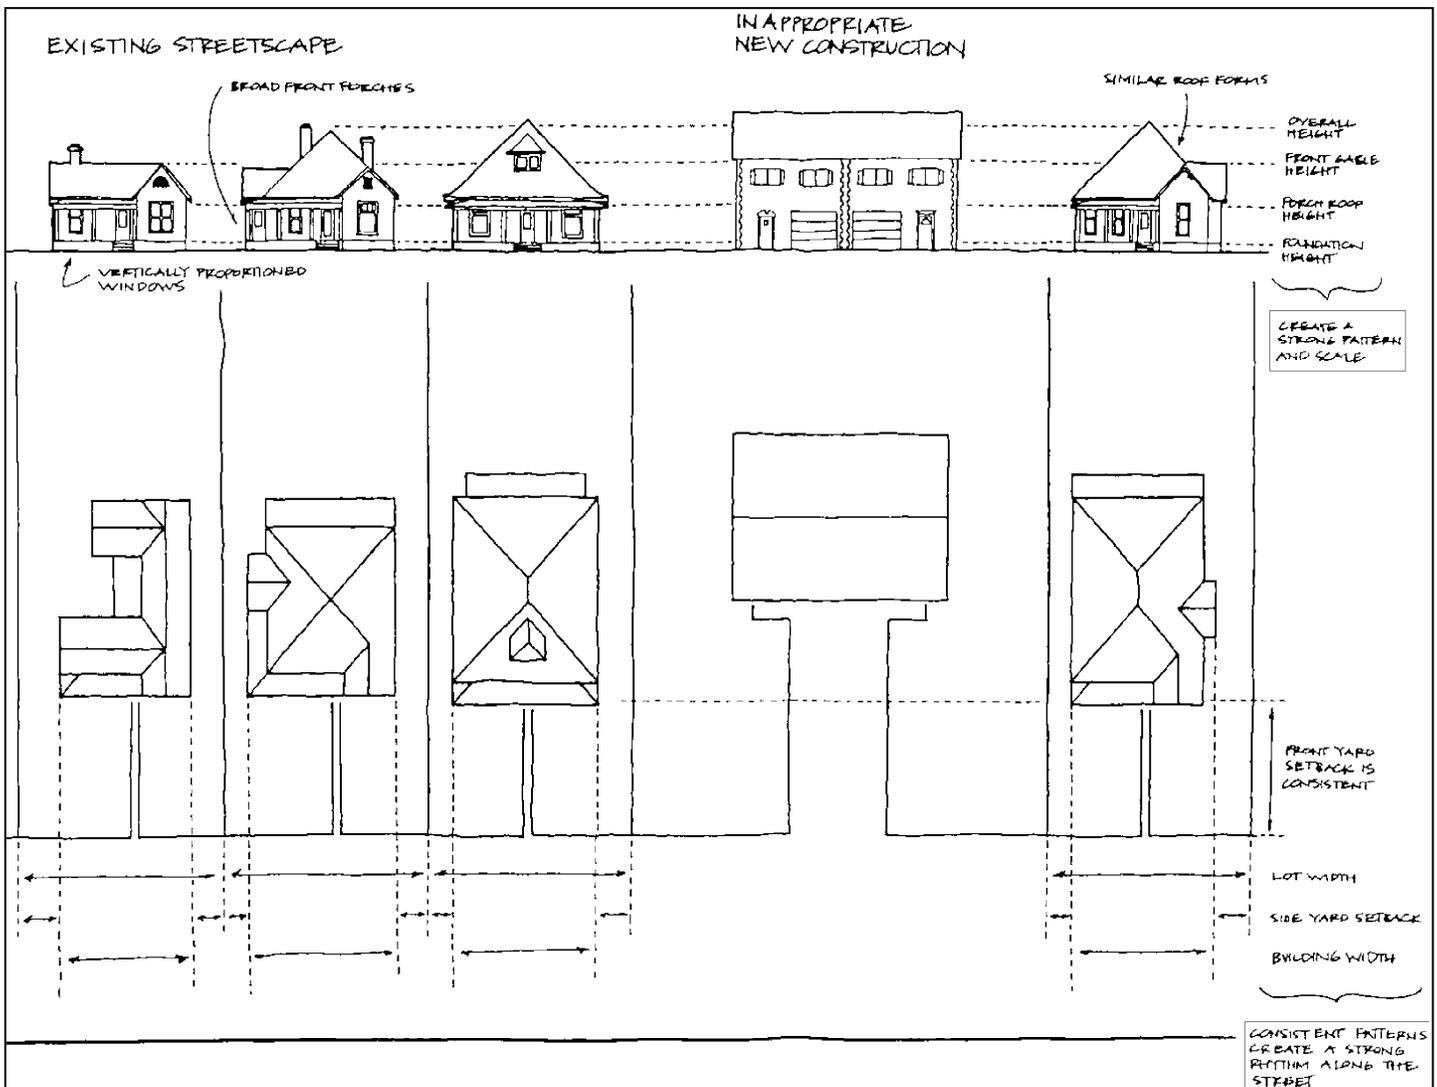

## II. NEW CONSTRUCTION AND ADDITIONS

2. The public facades—front- and street-related sides—of proposals for new buildings shall be more carefully reviewed than other facades.

*Specifically for corner lots, because they are visible from a public street, a secondary elevation is reviewed similarly to a primary elevation.*

*Specifically for corner lots, because they are visible from a public street, a secondary elevation and outbuilding is reviewed similarly to a primary elevation.*

3. New buildings should not imitate past architectural styles; they should reflect the era of their own construction. For an exception to this principle, see number 4.

## II. NEW CONSTRUCTION AND ADDITIONS

*This principle precludes the "theme park effect." Fake old buildings are not appropriate. New buildings inspired by historic styles, but identifiable as new construction, can be appropriate.*

## II. NEW CONSTRUCTION

### B. GUIDELINES

#### 1. Height

New buildings must be constructed to the same number of stories and to a height which is compatible with the height of adjacent buildings.

*The height of the foundation wall, porch roof, and main roofs should all be compatible with those of surrounding historic buildings.*

*Infill construction on the 1400 -1600 blocks of Boscobel Street may be up to two-stories.*

*For those lots located within the Five Points Subdistrict of the Five Points Redevelopment District new buildings shall not exceed 2 stories and 30' in height. A third story and 15' may be added provided that is for residential use only and is compatible with existing adjacent historic structures. The third story must be stepped back at least 10' from façade planes facing a residential subdistrict, an existing house (regardless of use), and public streets. All front and side building walls shall be a minimum of 20' in height. For multi-story buildings, the minimum first floor height shall be 14' from finished floor to finished floor. Exception: buildings with first floor residential use, minimum first floor height shall be 12'.*

*For those lots located within the Corner Commercial Subdistrict of the Five Points Redevelopment District new buildings shall not exceed 2 stories and 30' in height. An additional story may be added to a building provided that, where it is adjacent to a detached house or a residential subdistrict, it is set back a minimum of 25' from the building wall or 50' from the property line. Three story building height shall not exceed 45'. All front and side buildings walls shall be a minimum of 16' in height and at the build-to line. For multi-story buildings, the minimum first floor height shall be 14' from finished floor to finished floor.*

*For those lots located within the Residential Subdistrict of the Five Points Redevelopment District shall not exceed 3 stories .*

#### 2. Scale

The size of a new building and its mass in relation to open spaces; and its windows, doors, openings, and porches should be visually compatible with surrounding historic buildings.

*Foundation lines should be visually distinct from the predominant exterior wall material. This is typically accomplished with a change in material.*

#### 3. Setback and Rhythm of Spacing

The setback from front and side yard property lines established by adjacent buildings must be maintained. When a definite rhythm along a street is established by uniform lot width and building width, infill new buildings should

## II. NEW CONSTRUCTION

maintain the rhythm.

*The Commission has the ability to reduce building setbacks and extend height limitations of the required underlying base zoning for new construction, additions and accessory structures (ordinance no. 17.40.410).*

*Appropriate setback reductions will be determined based on:*

- *The existing setback of the contributing primary buildings and accessory structures found in the immediate vicinity;*
- *Setbacks of like structures historically found on the site as determined by historic maps, site plans or photographs;*
- *Shape of lot;*
- *Alley access or lack thereof;*
- *Proximity of adjoining structures; and*
- *Property lines.*

*Appropriate height limitations will be based on:*

- *Heights of historic buildings in the immediate vicinity*
- *Existing or planned slope and grade*

*Infill construction on the 1400 - 1600 blocks of Boscobel Street may have widths up to 40'.*

### 4. Relationship of Materials, Textures, Details, and Material Colors

The relationship and use of materials, textures, details, and material color of a new building's public facades shall be visually compatible with and similar to those of adjacent buildings, or shall not contrast conspicuously.

*T-1-11- type building panels, "permastone", E.F.I.S. and other artificial siding materials are generally not appropriate. However, pre-cast stone and cement fiberboard siding are approvable cladding materials for new construction; but pre-cast stone should be of a compatible color and texture to existing historic stone clad structures in the district; and cement fiberboard siding, when used for lapped siding, should be smooth and not stamped or embossed and have a maximum of a 5" reveal. The reveal for lap siding should not exceed 5". Larger reveals may be possible but should not exceed 8" and shall have mitered corners.*

*Shingle siding should exhibit a straight-line course pattern and exhibit a maximum exposure of seven inches (7").*

*Four inch (4") nominal corner boards are required at the face of each exposed corner.*

*Stud wall lumber and embossed wood grain are prohibited.*

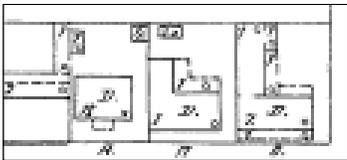

*Belt courses or a change in materials from one story to another are often encouraged for large two-story buildings to break up the massing.*

*When different materials are used, it is most appropriate to have the change happen at floor lines.*

*Clapboard sided chimneys are generally not appropriate. Masonry or stucco is appropriate.*

*Texture and tooling of mortar on new construction should be similar to historic examples.*

*Asphalt shingle is an appropriate roof material for most buildings. Generally, roofing should not*

*Setback requirements didn't exist when our historic districts developed so existing conditions sometimes require a little leeway in setbacks required by codes to help new construction fit in with the neighborhood.*

## II. NEW CONSTRUCTION

*have strong simulated shadows in the granule colors which results in a rough, pitted appearance; faux shadow lines; strongly variegated colors; colors that are too light (e.g.: tan, white, light green); wavy or deep color/texture used to simulate split shake shingles or slate; excessive flared form in the shingle tabs; uneven or sculpted bottom edges that emphasize tab width or edges, unless matching the original roof.*

*Primary entrances should be 1/2 to full-light doors. Faux leaded glass is inappropriate. Generally front doors should be 1/2 to full-light. Faux leaded glass is inappropriate.*

### 5. Roof Shape

The roofs of new buildings shall be visually compatible, by not contrasting greatly, with the roof shape and orientation of surrounding buildings.

*Roof pitches should be similar to the pitches found in the district. Historic roofs are generally between 6/12 and 12/12.*

*Roof pitches for porch roofs are typically less steep, approximately in the 3-4/12 range.*

*Generally, two-story residential buildings have hipped roofs.*

*Generally, dormers should be located on the roof. Wall dormers are not typical in the historic context and accentuate height so they should be used minimally and generally only on secondary facades. When they are appropriate they should be no wider than the typical window openings and should not project beyond the main wall.*

*Did you know? Historic wood windows can be as efficient and last longer than new windows if kept in good repair and properly maintained.*

*Infill construction on the 1400 -1600 blocks of Boscobel Street may have flat roofs or roofs with a minimal slope.*

### 6. Orientation

The site orientation of new buildings shall be consistent with that of adjacent buildings and shall be visually compatible. Directional expression shall be compatible with surrounding buildings, whether that expression is vertical, horizontal, or non-directional.

#### *Porches*

*New buildings should incorporate at least one front street-related porch that is accessible from the front street.*

*Side porches or porte cocheres may also be appropriate as a secondary entrance, but the primary entrance should address the front.*

*Front porches generally should be a minimum of 6' deep, have porch racks that are 1'-3' tall and have posts that include bases and capitals.*

#### *Parking areas and Driveways*

*Generally, curb cuts should not be added.*

*Where a new driveway is appropriate it should be two concrete strips with a central grassy median.*

## II. NEW CONSTRUCTION

*Shared driveways should be a single lane, not just two driveways next to each other. Sometimes this may be accomplished with a single lane curb cut that widens to a double lane deeper into the lot.*

### *Duplexes*

*Infill duplexes shall have one or two doors facing the street, as seen on historic duplexes. In the case of corner lots, an entrance facing the side street is possible as long as it is designed to look like a secondary entrance.*

*In the case of duplexes, vehicular access for both units should be from the alley, where an alley exists. A new shared curb cut may be added, if no alley and no driveway exists, but the driveway should be no more than 12' wide from the street to the rear of the home. Driveways should use concrete strips where they are typical of the historic context. Front yard parking or driveways which end at the front of the house are not consistent with the character of the historic neighborhoods.*

### *Multi-unit Developments*

*For multi-unit developments, interior dwellings should be subordinate to those that front the street. Subordinate generally means the width and height of the buildings are less than the primary building(s) that faces the street.*

*For multi-unit developments, direct pedestrian connections should be made between the street and any interior units. The entrances to those pedestrian connections generally should be wider than the typical spacing between buildings along the street.*

## 7. Proportion and Rhythm of Openings

The relationship of width to height of windows and doors, and the rhythm of solids (*walls*) to voids (*door and window openings*) in a new building shall be compatible, by not contrasting greatly, with surrounding *historic* buildings.

*Window openings on the primary street-related or front façade of new construction should be representative of the window patterns of similarly massed historic structures within the district.*

*In most cases, every 8-13 horizontal feet of flat wall surface should have an opening (window or door) of at least 4 square feet. More leniencies can be given to minimally visible side or rear walls.*

*Double-hung windows should exhibit a height to width ratio of at least 2:1.*

*Windows on upper floors should not be taller than windows on the main floor since historically first floors have higher ceilings than upper floors and so windows were typically taller on the first floor.*

*Single-light sashes are appropriate for new construction. If using multi-light sashes, muntins should be fully simulated and bonded to the glass, and exhibit an interior bar, exterior bar, as well as a spacer between glass panes.*

*Four inch (nominal) casings are required around doors, windows and vents on non-masonry buildings. Trim should be thick enough to extend beyond the clapboard. Double or triple windows should have a 4" to 6" mullion in between.*

## II. NEW CONSTRUCTION AND OUTBUILDINGS

*Brick molding is required around doors, windows and vents within masonry walls but is not appropriate on non-masonry buildings.*

### 8. Outbuildings

*(Although the MHZC does not review use itself there are additional ordinance requirements for buildings that are or have a Detached Accessory Dwelling Unit (DADU) required by ordinance 17.16.030 that are reviewed by the MHZC. This information is provided for informational purposes only and does not replace ordinance 17.16.030.)*

- a. Garages and storage buildings should reflect the character of the existing house and surrounding buildings and should be compatible in terms of height, scale, roof shape, materials, texture, and details.

#### *Outbuildings: Height & Scale*

- *On lots less than 10,000 square feet, the footprint of a DADU or outbuilding shall not exceed 750 square feet or fifty percent of the first floor area of the principal structure, whichever is less.*
- *On lots 10,000 square feet or greater, the footprint of a DADU or outbuilding shall not exceed one thousand square feet.*
- *The DADU or outbuilding shall maintain a proportional mass, size, and height to ensure it is not taller or wider than the principal structure on the lot. The DADU or outbuilding height shall not exceed the height of the principal structure, with a maximum eave height of 10' for one-story DADUs or outbuildings and 17' for two-story DADUs or outbuildings. The roof ridge height of the DADU or outbuilding must be less than the principal building and shall not exceed 25' feet in height.*
- *To reflect the character of historic outbuildings, new outbuildings for duplexes should not exceed the requirements for outbuildings for the entire lot and should not be doubled. The most appropriate configurations would be two 1-bay buildings with or without parking pads for additional spaces or one 2-bay building.*

#### *Outbuildings: Character, Materials and Details*

- *Historically, outbuildings were either very utilitarian in character, or (particularly with more extravagant houses) they repeated the roof forms and architectural details of the houses to which they related. Generally, either approach is appropriate for new outbuildings. DADUs or outbuildings located on corner lots should have similar architectural characteristics, including roof form and pitch, to the existing principal structure.*
- *DADUs or outbuildings with a second story shall enclose the stairs interior to the structure and properly fire rate them per the applicable life safety standards found in the code editions adopted by the Metropolitan Government of Nashville.*

#### *Outbuildings: Roof*

## II. NEW CONSTRUCTION AND OUTBUILDINGS

- *Roof slopes on simple, utilitarian buildings do not have to match the roof slopes of the main structure, but generally should maintain at least a 4/12 pitch.*
- *The DADU or outbuilding may have dormers that relate to the style and proportion of windows on the DADU and shall be subordinate to the roof slope by covering no more than fifty percent of the roof plane and should sit back from the exterior wall by 2'. (The width of the dormer shall be measured side-wall to side-wall and the roof plane from eave to eave.)*

### *Outbuildings: Windows and Doors*

- *Publicly visible windows should be appropriate to the style of the house.*
- *Double-hung windows are generally twice as tall as they are wide and of the single-light sash variety.*
- *Publicly visible pedestrian doors must either be appropriate for the style of house to which the outbuilding relates or be flat with no panels.*
- *Metal overhead doors are acceptable on garages when they are simple and devoid of overly decorative elements typical on high-style wooden doors. Decorative raised panels on publicly visible garage doors are generally not appropriate.*
- *For street-facing facades, garages with more than one-bay should have multiple single doors rather than one large door to accommodate more than one bay.*

### *Outbuildings: Siding and Trim*

- *Brick, weatherboard, and board-and-batten are typical siding materials.*
  - *Exterior siding may match the existing contributing building's original siding; otherwise, siding should be wood or smooth cement-fiberboard lap siding with a maximum exposure of five inches (5"), wood or smooth cement-fiberboard board-and-batten or masonry.*
  - *Four inch (4" nominal) corner-boards are required at the face of each exposed corner.*
  - *Stud wall lumber and embossed wood grain are prohibited.*
  - *Four inch (4" nominal) casings are required around doors, windows, and vents within clapboard walls. Trim should be thick enough to extend beyond the clapboard. Double or triple windows should have a 4" to 6" mullion in between.*
- Brick molding is required around doors, windows, and vents within masonry walls but is not appropriate on non-masonry clad buildings.*

b. Garages, if visible from the street, should be situated on the lot as historically traditional for the neighborhood.

*Generally new garages should be placed close to the alley, at the rear of the lot, or in the original location of an historic accessory structure.*

*Lots without rear alleys may have garages located closer to the primary structure. The appropriate location is one that matches the neighborhood or can be documented by historic maps.*

*Generally, attached garages are not appropriate; however, instances where they may be are:*

- *Where they are a typical feature of the neighborhood; or*

## II. NEW CONSTRUCTION AND OUTBUILDINGS

- *When the location of the attached garage is in the general location of an historic accessory building, the new garage is located in the basement level, and the vehicular access is on the rear elevation.*

### *Setbacks & Site Requirements.*

*Generally new outbuildings should be placed in rear yards, close to the rear property line, or in the original location of an historic accessory structure. Outbuildings may be as close as 3’ to the rear property line if there are no garage doors facing the rear property line or they may be as close as 5’ if there are garage doors facing the rear property line. (Appropriate setbacks approved by Commission on 6/21/17 and notes in Rules of Order and Procedure.)*

*Lots without rear alleys may have outbuildings located closer to the primary structure. The appropriate location is one that matches the neighborhood or can be documented by historic maps.*

*Generally, attached garages are not appropriate; however, instances where they may be are:*

- *Where they are a typical feature of the neighborhood; or*
- *When the location of the attached garage is in the general location of an historic accessory building, the new garage is located in the basement level, and the vehicular access is on the rear elevation.*
- *For corner lots, the DADU or outbuilding should match the context of homes on the street. If there is no context, the street setback should be a minimum of 10’.*
- *There should be a minimum separation of 20’ between the principal structure and the DADU or outbuilding.*

### *Driveway Access.*

- *On lots with no alley access, the lot shall have no more than one curb-cut from any public street for driveway access to the principal structure as well as the detached accessory dwelling or outbuilding.*
- *On lots with alley access, any additional access shall be from the alley and no new curb cuts shall be provided from public streets.*
- *Parking accessed from any public street shall be limited to one driveway for the lot with a maximum width of twelve feet.*

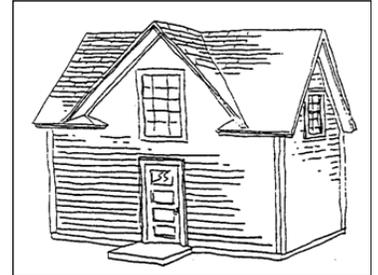

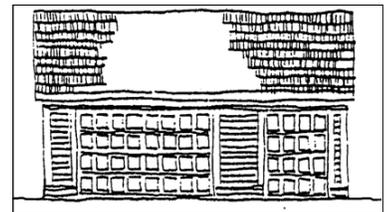

### ***Additional Requirements for DADUs from Ordinance 17.16.030. See requirements for outbuildings for additional requirements.***

- *The lot area on which a DADU is placed shall comply with Table 17.12.020.A.*
- *The DADU may not exceed the maximums outlined previously for outbuildings.*
- *No additional accessory structure shall exceed two hundred square feet when there is a DADU on the lot.*

### *Density.*

- *A DADU is not allowed if the maximum number of dwelling units permitted for the lot has been met or if the lots has been subdivided since August 15, 1984.*

### *Ownership.*

***Detached Accessory Dwelling Units*** are allowed in overlays that are zoned R80-R6, RM2-RM20-A, RM40-RM100-A, OR20-OR40-A and ORI and ORI-A. Buildings with this use must meet the requirements of Ordinance No. 17.12.020, as well as these design guidelines.

## II. NEW CONSTRUCTION AND OUTBUILDINGS

- *a. No more than one DADU shall be permitted on a single lot in conjunction with the principal structure.*
  - *The DADU cannot be divided from the property ownership of the principal dwelling.*
  - *The DADU shall be owned by the same person as the principal structure and one of the two dwellings shall be owner-occupied.*
  - *Prior to the issuance of a permit, an instrument shall be prepared and recorded with the register's office covenanting that the DADU is being established accessory to a principal structure and may only be used under the conditions listed here.*  
*Bulk and Massing.*
  - *The living space of a DADU shall not exceed seven hundred square feet.*
- c. The location and design of outbuildings should not be visually disruptive to the character of the surrounding buildings.

### 9. Appurtenances

Appurtenances related to new buildings, including driveways, sidewalks, lighting, fences, and walls, shall be visually compatible with the environment of the existing buildings and sites to which they relate.

### ***Multi-unit Detached Developments/ Cottage Developments***

*Multi-unit detached developments or "cottage" developments are only appropriate where the Planning Commission has agreed that the community plan allows for the density requested and the design guidelines for "new construction" can be met.*

*The buildings facing the street must follow all the design guidelines for new construction. The interior units need not meet the design guidelines for setbacks and rhythm of spacing on the street.*

*Interior dwellings should be subordinate to those that front the street. Subordinate generally means the width and height of the buildings are less than the primary building(s) that face the street.*

*Interior dwellings should be "tucked-in" behind the buildings facing the street.*

*Direct pedestrian connections should be made between the street and any interior units. The entrances to those pedestrian connections generally should be wider than the typical spacing between buildings along the street.*

*Attached garages are only appropriate for rear units along the alley.*

### ***Utilities***

*Utility connections such as gas meters, electric meters, phone, cable, and HVAC condenser units should be located so as to minimize their visibility from the street.*

*Generally, utility connections should be placed no closer to the street than the mid point of the structure. Power lines should be placed underground if they are carried from the street and not from the rear or an alley.*

### ***Public Spaces***

## II. NEW CONSTRUCTION AND ADDITIONS

*Landscaping, sidewalks, signage, lighting, street furniture and other work undertaken in public spaces by any individual, group or agency shall be presented to the MHZC for review of compatibility with the character of the district.*

*Generally, mailboxes should be attached to the front wall of the house or a porch post. In most cases, street-side mailboxes are inappropriate.*

### 10. Additions to Existing Buildings

a. New additions to existing buildings should be kept to a minimum and should be compatible in scale, materials, and texture; additions should not be visually jarring or contrasting.

*A new addition should be constructed in such a manner that if the addition were to be removed in the future, the essential form and integrity of the original structure would be unimpaired. Connections should, as much as possible, use existing window and door openings rather than remove significant amounts of rear wall material.*

*Generally rear additions should inset one foot, for each story, from the side wall.*

*Additions should be physically distinguished from the historic building and generally fit within the shadow line of the existing building.*

*Additions that tie into the existing roof should be at least 6" below the existing ridge.*

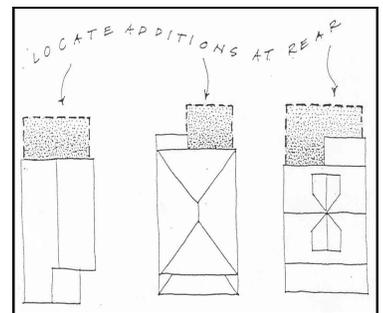

*In order to assure that an addition has achieved proper scale, the addition should generally be shorter and thinner than the existing building. Exceptions may be made when unusual constraints make these parameters unreasonable, such as:*

- *An extreme grade change*
- *Atypical lot parcel shape or size*

*In these cases, an addition may rise above or extend wider than the existing building; however, generally the addition should not higher and extend wider.*

*When an addition needs to be taller:*

*Whenever possible, additions should not be taller than the historic building; however, when a taller addition is the only option, additions to single story structures may rise as high as 4' above the shadow line of the existing building at a distance of 40' from the front edge of the existing building. In this instance, the side walls and roof of the addition must set in as is typical for all additions. The portion of the roof that can be seen should have a hipped, side gable or clipped gable roof to help decrease the visual mass of the addition.*

*When an addition needs to be wider:*

*Rear additions that are wider than an existing historic building may be appropriate when the building is narrower than 30' or shifted to one side of the lot. In these instances, a structural alcove or channel must separate the existing building from the new addition. The structural alcove should sit in a minimum of 1' and be at least twice as long as it is deep.*

*In addition, a rear addition that is wider should not wrap the rear corner.*

*Commercial buildings that desire a covered open-air side additions generally should not enclose the*

## II. NEW CONSTRUCTION AND ADDITIONS

*area with plastic sides. Such applications may be appropriate if: the addition is located on the ground level off a secondary facade, is not located on a street facing side of a building, has a permanent glass wall on the portion of the addition which faces the street, and the front sits back a minimum of three (3') from the front or side wall, depending on placement of the addition.*

### Ridge raises

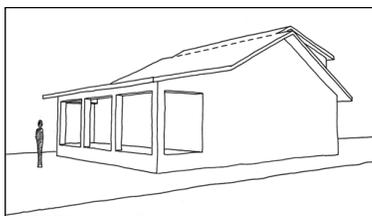

*Ridge raises are most appropriate for one-story, side-gable buildings, (without clipped gables) and that require more finished height in the attic. The purpose of a ridge raise is to allow for conditioned space in the attic and to discourage large rear or side additions. The raised portion must sit in a minimum of 2' from each side wall and can be raised no more than 2' of total vertical height within the same plane as the front roof slope.*

### Sunrooms

*Metal framed sunrooms, as a modern interpretation of early green houses, are appropriate if they are mostly glass or use appropriate cladding material for the district, are located at the rear in a minimally visible location, are minimally attached to the existing structure, and follow all other design guidelines for additions.*

### Foundation

*Foundation walls should set in from the existing foundation at the back edge of the existing structure by one foot for each story or half story. Exception: When an addition is a small one-room deep (12' deep or less) addition that spans the width of the structure, and the existing structure is masonry with the addition to be wood (or appropriate substitute siding). The change in material from masonry to wood allows for a minimum of a four inch (4") inset.*

*Foundation height should match or be lower than the existing structure.*

*Foundation lines should be visually distinct from the predominant exterior wall material. This is generally accomplished with a change in materials.*

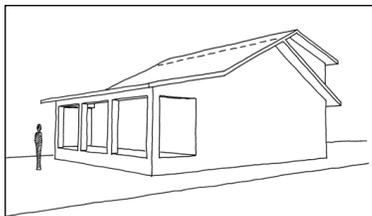

**Appropriate Ridge Raise:** rear dormers are set in from the side wall of the existing house at least 2', creating a division between new and old.

### Roof

*The height of the addition's roof and eaves must be less than or equal to the existing structure.*

*Visually evident roof slopes should match the roof slopes of the existing structure, and roof planes should set in accordingly for rear additions.*

*Skylights should not be located on the front-facing slope of the roof. Skylights should be flat (no bubble lenses) with a low profile (no more than six inches tall) and only be installed behind the midpoint of the building).*

**Inappropriate Ridge Raise:** rear dormers have no inset; they visually and physically alter the roof structure of the existing house.

### Rear & Side Dormers

*Dormer additions are appropriate for some historic buildings as they are a traditional way of adding ventilation and light to upper stories.*

*The addition of a dormer that would require the removal of historic features such as an existing dormer, chimneys, cupolas or decorative feature is not appropriate.*

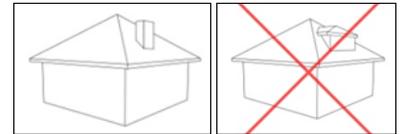

## II. NEW CONSTRUCTION AND ADDITIONS

Rear dormers should be inset from the side walls of the building by a minimum of two feet. The top of a rear dormer may attach just below the ridge of the main roof or lower.

Side dormers should be compatible with the scale and design of the building. Generally, this can be accomplished with the following:

- New dormers should be similar in design and scale to an existing dormer on the building.
- New dormers should be similar in design and scale to an existing dormer on another historic building that is similar in style and massing.
- The number of dormers and their location and size should be appropriate to the style and design of the building. Sometimes dormer locations relate to the openings below. The symmetry or lack of symmetry within a building design should be used as a guide when placing dormers.
- Dormers should not be added to secondary roof planes.
- Eave depth on a dormer should not exceed the eave depth on the main roof.
- The roof form of the dormer should match the roof form of the building or be appropriate for the style.
- The roof pitch of the dormer should generally match the roof pitch of the building.
- The ridge of a side dormer should be at least 2' below the ridge of the existing building; the cheeks should be inset at least 2' from the wall below or adjacent valley; and the front wall of the gable should setback a minimum of 2' from the wall below. (These minimum insets will likely be greater than 2' when following the guidelines for appropriate scale.)
- Dormers should generally be fully glazed and aprons below the window should be minimal.
- The exterior material cladding of side dormers should match the primary or secondary material of the main building.

The dormer shown added on the right image is inappropriate because it required the removal of the chimney.

- b. Additions should not be made to the public facades of existing buildings. Additions may be located to the rear of existing buildings in ways which do not disturb the public facades.

### Placement

Additions should be located at the rear of an existing structure.

Connections to additions should, as much as possible, use existing window and door openings rather than remove significant amounts of rear wall material.

Generally, one-story rear additions should inset one foot, for each story, from the side wall.

Additions should be physically distinguished from the historic building and generally fit within the shadow line of the existing building.

### Side Additions

When a lot width exceeds 60' or the standard lot width on the block, it may be appropriate to add a side addition to a historic structure. The addition should set back from the face of the historic structure (at or beyond the midpoint of the building) and should be subservient in

Dormers should not be added to secondary roof planes.

## II. NEW CONSTRUCTION AND ADDITIONS

*height, width and massing to the historic structure.*

*Side additions should be narrower than half of the historic building width and exhibit a height of at least 2' shorter than the historic building.*

*To deemphasize a side addition, the roofing form should generally be a hip or side-gable roof form.*

*Commercial buildings that desire a covered open-air side additions generally should not enclose the area with plastic sides. Such applications may be appropriate if: the addition is located on the ground level off a secondary facade, is not located on a street facing side of a building, has a permanent glass wall on the portion of the addition which faces the street, and the front sits back a minimum of three (3') from the front or side wall, depending on placement of the addition.*

c. Additions must not imitate earlier styles of periods of architecture.

*The addition should set back from the face of the historic structure (at or beyond the midpoint of the building) and should be subservient in height, width and massing to the historic structure.*

*Side additions should be narrower than half of the historic building width and exhibit a height of at least 2' shorter than the historic building.*

*To deemphasize a side addition, the roofing form should generally be a hip or side-gable roof form.*

*Contemporary designs for additions to existing properties are not discouraged when such additions do not destroy significant historical, architectural, or cultural material; and when such design is compatible, by not contrasting greatly, with the size, scale, color, material, and character of the property, neighborhood, or environment.*

*Side porch additions may be appropriate for corner building lots or lots more than 60' wide.*

d. The creation of an addition through the enclosure of a front facade porch is inappropriate and should be avoided.

*Additions should follow all New Construction guidelines.*

### III. DEMOLITION

#### A . PRINCIPLE

The demolition of a building, or major portion of a building, which contributes historically or architecturally to the character and significance of the district is not appropriate and should be avoided.

#### B. GUIDELINES

##### Demolition is not appropriate

- a. if a building, or major portion of a building, is of such architectural or historical interest and value that its removal would be detrimental to the public interest; or
- b. if a building, or major portion of a building, is of such old or unusual or uncommon design and materials that it could not be reproduced or be reproduced without great difficulty and expense.

##### Demolition is appropriate

- a. if a building, or major portion of a building, has irretrievably lost its architectural and historical integrity and significance and its removal will result in a more historically appropriate visual effect on the district;
- b. if a building, or major portion of a building, does not contribute to the historical and architectural character and significance of the district and its removal will result in a more historically appropriate visual effect on the district; or
- c. if the denial of the demolition will result in an economic hardship on the applicant as determined by the MHZC in accordance with section 17.40.420 (Historic Zoning Regulations), Metropolitan Comprehensive Zoning Ordinance.

## IV. RELOCATION

### A. PRINCIPLES

1. Moving a historic building from its original site should be avoided.
2. Moving a non-historic building, or a building which has irretrievably lost its architectural and historical integrity, may be appropriate.

### B. GUIDELINES

1. Moving a building into the district is appropriate if the building will be compatible with the historic buildings surrounding the new location in terms of height, scale, setback and rhythm of spacing, materials, texture, details, material color, roof shape, orientation, and proportion and rhythm of openings.
2. Moving a building out of the district is not appropriate unless:
  - a. the building does not contribute to the district's historical and architectural significance, or has irretrievably lost its architectural and historical integrity; or
  - b. the building is historic, but the loss of its architectural and historical integrity in its original location is certain.
3. Moving a building from one location to another within the district is not appropriate unless:
  - a. the building will be compatible with the historic buildings surrounding the new location in terms of height, scale, setback and rhythm of spacing, materials, texture, details, material color, roof shape, orientation, and proportion and rhythm of openings; and
  - b. if historic, the loss of its architectural and historical integrity in its original location is certain.

*In some cases, moving a residential building to a new foundation also requires approval of the Planning Commission, according to 13-3-502 of the Tennessee Code Annotated. Please contact the Planning Department for additional information.*

## V. DEFINITIONS

**Addition:** 1. New construction that increases the habitable space of an existing structure, and is capable of being heated or cooled. 2. An alteration that changes the exterior height of any portion of an existing building, such as skylights, covered porches, covered decks, carports and porte cocheres.

**Adjacent:** Surrounding or close proximity.

**Appropriate:** Suitable for, or compatible with, a property or district, based on accepted standards and techniques for historic preservation.

**Certificate of Appropriateness:** See Preservation Permit.

**Contributory Status:** Buildings constructed during the period of significance for the district and that have physical integrity are considered as “contributing” to the historic character of the district. They may or may not be significant in their own right. Buildings that do not contribute to the historic character of the district are called non-contributing. Contributory status can change over time as new information becomes available and as districts age. The first factor to consider is the building’s age. Was the building constructed during the period of significance of the district? Is that period of significance still valid? The second consideration is an analysis of the changes that have taken place over time. Does the building retain the majority of its character defining features and form? If the building retains its original form, despite numerous changes, it is likely still considered contributing.

**Demolition:** The tearing down of a building, or a portion thereof.

**Economic Hardship:** A condition that warrants the demolition of a contributing structure where the cost of a structure plus the cost of repairs to the structure to make it habitable are greater than the market value of the structure. Economic hardship may be caused by, but not limited to structural damage, termite damage, and fire damage. This exception shall not apply to any property owner who creates a hardship condition or situation as a consequence of their own neglect or negligence. Refer to Section 17.40.420 D of the Metro Code of Nashville and Davidson County.

**Elevation:** A scaled drawing that illustrates the view of a face of a building.

**Embossed Grain:** The embossed pattern pressed into a manufactured material, simulating wood grain or texture.

**Facade:** An exterior face of a building.

**Historic:** A structure or site, usually constructed more than fifty years ago, which possesses historical or architectural significance, based on the criteria for listing in the National Register of Historic Places.

**New Construction:** Any building, addition, structure or appurtenance constructed on a lot

## DEFINITIONS, continued

*after the designation of the historic preservation, neighborhood conservation, or historic landmark zoning overlays.*

**Non-Historic:** *A structure or site, usually constructed within the last fifty years, which does not possess historical or architectural significance, based on the criteria for listing in the National Register of Historic Places.*

**Orientation:** *The directional expression of the front facade of a building, i.e., facing the street, facing north.*

**Period of Significance:** *The time frame in which a neighborhood developed or was platted into building lots and substantially built out with structures, based on the criteria for listing in the National Register of Historic Places.*

**Port Cochere:** *A carriage porch or portico-like structure generally located at a secondary entrance to a building.*

**Preservation Permit:** *A legal document issued by the Metropolitan Historic Zoning Commission confirming review and approval of work to be done on property within the boundaries of an historic or neighborhood conservation zoning overlay districts. A preservation permit is required before obtaining a building permit. Previously called Certificate of Appropriateness.*

**Public Right-of-Way:** *Publicly owned and maintained streets and walkways. For the purposes of historic, neighborhood conservation and landmark zoning overlays, alleys are not considered public rights-of-way.*

**Public Space:** *Any area owned, leased, or for which there is held an easement by a governmental entity, or an area that is required to be open to the public.*

**Reconstruction:** *Construction of an accurate replica of a historic building or portion thereof, based on physical, pictorial or documentary evidence.*

**Relocation:** *The moving of a building from one site to another.*

**Shall:** *What must happen.*

**Should:** *What must happen unless circumstances illustrate why an alternative is more appropriate.*
