

SHELTER LOCATION CRITERIA

Transit personnel have identified locations to place 100 new shelters throughout Metro Nashville. Shelters will be placed in areas with the highest passenger boardings, transfer point locations, and stops on routes with steady ridership but infrequent schedules with greater wait times. In addition, special consideration was made for bus stops frequented by seniors and people with disabilities. Other factors considered include:

- Locations that are transfer points between routes
- Pedestrian access
- ADA compliance
- Passenger safety
- Potential ridership generators
- Existing ridership
- Feasibility of construction
- Proximity to existing shelters and planned BRT shelters

SHELTER STRUCTURE FACTS

- All glass shelter
- 5' X 8
- 36" bench
- Solar powered security lighting
- Trash receptacle
- Ad panel
