

Summary of Streetbuilder Results

At the April 25 Open House, participants were asked to identify desired design features for the study and build their ideal street section for 8th Avenue South. They did so by choosing from a variety of design feature cutouts that represented elements such as travel lanes, medians, bike lanes, sidewalks, landscaping, and transit amenities. Once their ideal street was built, the design was photographed. The following are results of the Streetbuilder activity.
