## 1.0 Introduction

The Metropolitan Government of Nashville Davidson County (Metro) was issued the third cycle of the Municipal Separate Storm Sewer System (MS4) permit effective February 1, 2012. Under this permit, the reporting period for each permit year coincides with Metro's Fiscal Year (FY) (July 1<sup>st</sup> through June 30<sup>th</sup>). The reporting period for this report will be referred to as Fiscal Year 2023 (FY23), which represents the period between July 1, 2022, through June 30, 2023.

Each year, there are numerous individuals within different Metro Departments that work toward achieving overall MS4 permit compliance. As a measure to ensure permit compliance within the various facets of Metro government, the National Pollutant Discharge Elimination System Section (NPDES) was created to oversee all MS4 permit compliance activities. NPDES is a section within the Metro Water Services (MWS) Stormwater Division and is responsible for performing specific MS4 permit requirements such as public education activities, illicit discharge investigations, runoff/discharge sampling, construction site inspections, field screening inspections, industrial inspections, etc. In addition, NPDES is responsible for coordinating with various Metro Departments to ensure permit compliance measures are being followed on a Metro-wide basis.

The following table is a list of certain individuals that have contributed directly to specific MS4 permit compliance activities/information during FY23. Any inquiries regarding information represented in this report should be directed to the MWS Stormwater NPDES Office (Attn: Josh Hayes) at 1607 County Hospital Rd, Building A, Nashville, Tennessee, 37218, Phone: 615-880-2420, Email: Joshua.Hayes@Nashville.gov.

The following list is a description of commonly used acronyms throughout the document:

| 303(d) | State's List of Non-attainment Waterways (Water Quality Criteria for Use Classifications) |
|--------|---|
| CCTV   | Closed Circuit Televising   |
| CSS    | Combined Sewer System   |
| CWN    | Clean Water Nashville Program   |
| EMC    | Event Mean Concentration  |
| EPA    | Environmental Protection Agency   |
| EPSC   | Erosion Prevention and Sediment Control   |
| ERP    | Enforcement Response Plan   |
| FY23   | Fiscal Year 2023  |
| FEMA   | Federal Emergency Management Agency   |
| GIS    | Geographic Information System software  |
| LA     | Load Allocations for Streams with Approved TMDLs  |
| LID    | Low Impact Development  |
| MEP    | Maximum Extent Practicable  |
| MDPW   | Metro Department of Public Works  |
| Metro  | Metro Nashville Davidson County Government  |
| MNPR   | Metro Nashville Parks and Recreation  |
| MNPS   | Metro Nashville Public Schools  |
| MS4    | Municipal Separate Storm Sewer System   |
| MWS    | Metro Water Services  |
| NOV    | Notice of Violation   |
| NON    | Notice of Noncompliance   |
| NPDES  | National Pollutant Discharge Elimination System Section within MWS Stormwater Division    |
| O&M    | Operations and Maintenance  |
| OEM    | Mayor's Office of Emergency Management  |
| PIE    | Public Information/Education Plan   |
| RMCP   | Ready Mix Concrete Plant  |
| RMP    | Runoff Management Plan  |
| SCM    | Stormwater Control Measure (Post-Construction Stormwater Treatment)                       |
| SOP    | Standard Operating Procedure  |
| SSD    | System Services Division  |
| SWMC   | Stormwater Management Committee   |
| SWMM   | Stormwater Management Manual  |
| SWMP   | Stormwater Management Plan  |
| SWO    | Stop Work Order   |
| TDEC   | Tennessee Department of Environment and Conservation                                      |
| TMDL   | Total Maximum Daily Load of Pollutants Allowed within Streams                             |

| Christopher Michie           | Metro Health Department   | Septic System Oversight  |  |  |  |
| Pamela Wilson                | Metro Health Department   | Restaurant Inspection  |  |  |  |
| Ron Taylor                   | MWS                       | Program Manager, Overflow Abatement  |  |  |  |
| Matt Lott                    | MWS                       | Program Manager, System Services Overflow Response   |  |  |  |
| Tim Netsch                   | Metro Parks Department    | Assistant Director   |  |  |  |
| Ted Taylor                   | MWS                       | Laboratory Superintendent  |  |  |  |
| Andy Welch                   | MWS                       | Program Manager, Pre-treatment/FOG   |  |  |  |
| Anna Kuoppamaki              | MWS                       | GIS Analyst, Stormwater Master Planning Section  |  |  |  |

Note: There are many other personnel that contribute to the overall MS4 compliance program not listed on this table (i.e., Engineers in MWS Development Services, Various Maintenance Workers, etc.).

24

## 1.1 Objective of the Program

The objective of the Stormwater Management Program is to implement specific pollution prevention programs designed to improve the quality of Metro's water resources to the Maximum Extent Practicable (MEP), particularly as it relates to improving the quality of discharges from Metro's MS4. This leads to an overall goal of maintaining MS4 permit compliance, while simultaneously achieving water quality improvements in every Metro stream reach, including those listed on the Tennessee Department of Environment and Conservation's (TDEC's) 303(d) list of streams with unavailable parameters. It is Metro's long-term goal to reduce pollutant loadings from the MS4 to remove a majority of the streams from the 303(d) list that are indicated as being impaired by MS4 runoff. As Metro maintains compliance with the current MS4 permit requirements, it is important to evaluate the success of the major pollution prevention programs that have been implemented in the first 3 permit cycles. Over those permit cycles, Metro has made great strides to improve stormwater runoff from construction sites, industrial sites, commercial sites, residential sites, and Metro roadways/properties. Overall, the implementation of these control programs has worked to significantly reduce and minimize pollutants from entering the MS4 drainage system and the receiving streams.

## 1.2 Major Stormwater Pollution Findings

Each year there are generally fewer major discoveries of pollution to the MS4 drainage system. This can be largely attributed to the long-term implementation of core pollution prevention programs such as Metro's public education efforts, proactive inspections of commercial and industrial properties, increased oversight and permitting requirements on development/construction activities, and continual monitoring of Metro's vast watersheds. The paragraphs below describe some of the more notable investigations and compliance actions performed by Metro that have directly benefited the water quality of the MS4 and Davidson County streams during FY23.

## 1.2.1 Dry Weather Field Screening Findings

While performing proactive dry weather field screening of commercial/industrial properties, an NPDES inspector found heavy staining in the parking lot of an industrial food processing plant. There was evidence that Fats, Oil, and Grease (FOG) material exposed on their parking lot eventually discharged during a storm event to the MS4. NDPES issued a Notice of Violation (NOV) and an associated \$300 administrative penalty to the site, requiring them to clean up all exposed FOG materials and take appropriate actions to prevent future FOG exposures. As a result, the facility remediated all FOG material from their parking lot and replaced their leaking dumpster with a sealed dumpster.

Photos of the Exposed FOG Material on the Parking Lot

During a separate field screening inspection of a local brewery, the NPDES inspector noticed that a large amount of spent grain had just been spilled on their lot. NPDES coordinated with site management and confirmed that they were actively working on cleaning it up. In the previous complaints received by NPDES due to exposed product on their lot, NPDES worked with management to develop a better spent grain storage system to prevent the material from being exposed to stormwater runoff. While the facility had implemented better site management practices, it appeared that the spill just happened right before NPDES performed their field screening inspection. NPDES continued to coordinate with the facility until all spilled material was properly cleaned up. NPDES is planning on expanding educational outreach to local breweries over future years, as the exposure of spent grain has been found to be a common issue at these facilities.

Photos of Spent Grain Spilled at Local Brewery

## 1.2.2 NPDES Water Quality Investigations

## Sewer Issue Found During Routine SCM Inspections:

While inspecting a Stormwater Control Measure (SCM) at an apartment complex, the inspector found what appeared to be sewage draining into an old dry detention pond. The NPDES water quality inspector was notified and met with SCM inspector at the site to sample the discharge, confirming the material was sanitary sewer. The NPDES water quality inspector tracked the sewage discharge to a failed, privately-owned grinder pump. NPDES worked with management at the apartment complex to immediately address the issue. A follow up inspection was performed two days later. The pump was repaired, and the exposed sewage sludge was cleaned up properly.

Photos of the Exposed Sewage Material Draining into an Old Dry Detention Pond

FY23 Annual Report (Page 5)

#### Sediment Discharge from an Industrial Facility:

NPDES received a citizen complaint that Murphy Branch, a tributary to Richland Creek, was running milky white after a recent heavy rain. This same complaint has been received by NPDES for several years, but due to the large area of watershed, NPDES has not been able to pinpoint where the discharge was originating. This section of MS4 drainage has an extensive area that flows through underground pipes, eventually becoming visible at the McCabe Golf Course before discharging into Richland Creek. NPDES performed sampling that confirmed the discharge was not sewage-related. After performing detailed inspections of various properties in the watershed, an NDPES water quality inspector found a galvanizing industrial facility discharging large volumes of sediment from their outfalls. NPDES initiated a formal industrial inspection of the facility, which found that their settling ponds were overflowing, allowing sediment from their large gravel parking lot to route off site. NPDES notified TDEC of the inspection findings and required the facility to implement a Corrective Action Plan to prevent future discharges.

Photos of the Sediment Discharging from an Industrial Facility

## 1.2.3 NPDES Spill Response Activities

In April of 2023, NPDES received a report from the Tennessee Emergency Management Agency (TEMA) indicating the dock of the General Jackson had sunk into the Cumberland River. NDPES met TDEC at the site to assess the situation, as there were reports of fuel containers lost to the river as a result of the dock sinking. Containment booms had been put in place around the dock, but a sheen was noted escaping the containment booms during the inspection. NPDES and TDEC staff requested the additional deployment of absorbent booms to soak up the floating oil product trapped within the containment booms. After absorbent booms were deployed, the oil sheen was properly contained/did not route further downstream.

Photos of the Petroleum Containment/Absorbent Booms Deployed at Dock Sinking Fuel Spill

FY23 Annual Report (Page 6)

## 1.2.4 NPDES Construction Oversight Program

Any development or redevelopment activity involving the disturbance of more than 10,000 square feet requires a Metro grading permit. As part of the grading permit process, NPDES has 9 inspector positions dedicated to inspecting construction activity to ensure proper <u>e</u>rosion <u>prevention and <u>s</u>ediment <u>c</u>ontrol (EPSC) measures are installed and maintained during the project to prevent the discharge of sediment to the MS4 and community waters. Throughout FY23, there was an average of over 900 active grading permit sites that NPDES staff were inspecting on a routine basis. After receiving a citizen complaint of cloudy water in Sugartree Creek, one of NPDES inspectors found a permitted construction site improperly pumping muddy pit water directly to the stormwater drainage system. As a result of the investigation, NPDES issued an NOV with an accompanying \$600 administrative penalty to the site for failure to properly filter the pit pump water. The NOV required the site to stop all pumping operations until proper filtering controls were established.</u>

## Photos of the Pumped Muddy Pit Water and NOV

## 1.3 Major Stormwater Management Program Accomplishments and Highlights

## 1.3.1 MWS Stormwater Division

The MWS Stormwater Division has continued to facilitate major accomplishments in the development of the overall Stormwater Management Program. Accomplishments performed in recent years are listed below:

## SWMP Implementation/Updates:

In FY23, NPDES continued to implement Metro's MS4 Storm Water Management Plan (SWMP) that was developed during previous permit reporting periods. The SWMP, as required by the current MS4 permit, is a formal document that provides a comprehensive description of Metro's overall Stormwater Management Program. The SWMP describes Metro's methods of achieving each MS4 permit-required activity. The SWMP is an internal program document that is reviewed routinely to determine if improvements or updates are needed. All SWMP updates from previous years are included in the previously submitted Annual Reports. In FY23, NPDES updated the Public Information/Education (PIE) plan, which is an appendix to the SWMP. A copy of the updated PIE Plan is contained within Section 4 of this document.

Please note that Metro's permit cycle ended on January 31, 2017, but is currently administratively extended until such time as the permit is reissued by TDEC. With the pending issuance of the 4<sup>th</sup> iteration of Metro's MS4 permit, Metro believes some changes can be made to improve the efficiency of certain pollution prevention programs. Attachment B includes several communications submitted to TDEC detailing proposed changes to the Stormwater Management Program, which NPDES is currently implementing during the "administrative extension" period between permits. NPDES met with TDEC on November 16, 2017, to discuss these changes, and TDEC approved the testing of certain, slight MS4 program modifications during the transition/"administrative extension" period. On March 30, 2018, NPDES submitted a follow-up letter to TDEC explaining how the modifications have been beneficial to

the program. During FY23, NPDES continued to implement the changes detailed in these communications to TDEC since these modifications continue to demonstrate increased pollution prevention effectiveness.

#### Industrial Inspection Program

At the beginning of the permit cycle, NPDES created a thorough industrial inspection database that contained all of the MS4 permit-required industrial sites, such as those subject to reporting requirements pursuant to SARA Title III, Section 313, In creating the database, NPDES also included sites not required to be inspected by the permit, such as industrial facilities holding Tennessee Multi Sector Permits (TMSP), Ready-Mix Concrete Permits (RMCP), and Individual permits for process water discharges. In January of 2023, NPDES began updating the database as required by the permit. However, during this update, NPDES also added all active Mining Permits, State Operating Permits pertaining to septic systems, and facilities holding No Exposure Certifications. While not required to be inspected by the MS4 Permit, NPDES added the facilities to the database for the following reasons:

<u>Mining Permits</u>

Mining facilities have great potential to track out onto the right-of-way and discharge large quantities of process water not properly treated to filter out sediments. In the past, mining facilities have been investigated by NPDES due to illicit discharge complaints. By having regular inspections for all quarries, illicit discharges and tracking out from improperly managed mining sites should diminish.

• <u>State Operating Permits (SOP)</u>

Sites holding SOPs relating to septic tanks and drip irrigation fields have a risk of discharging untreated sewage material in the event of a system failure. By including these sites in the industrial database, NPDES is able to geolocate them in GIS and proactively inspect these facilities to determine if there are any compliance issues. 7 SOP sites were added and inspected in FY23 with no instances of illicit discharge noted.

<u>No Exposure Certifications (NEC)</u>

NEC facilities were included in this update because each site that applies for the certification is no longer inspected regularly by TDEC. Due to the lack of continued regulatory oversite of NECs, including these facilities in the industrial inspection database will allow NPDES to perform cursory windshield inspections of these facilities to ensure no exposure of industrial products or processes remain at the facilities.

Because NECs are treated like inactive TMSPs with the termination date of the permit often being the date of the NEC approval, TDEC's Data Viewer database listed over 400 NEC sites in Davidson County. NPDES utilized Google Earth and visited sites to determine what NEC facilities are still active, which resulted in an additional 29 businesses added to the NPDES industrial inspection database that were not currently inventoried. In FY23, NPDES inspected 37 NEC facilities of which 7 sites were required to renew their certifications due to expired certifications, and 19 sites were found with exposed materials/processes that had to be corrected to maintain compliance with the NEC. TDEC was also notified of any noncompliant issues found during inspections of NEC facilities. Going forward, NPDES plans to perform routine inspections of NEC sites to ensure compliance is maintained. Additionally, in FY24, NPDES plans to review TDEC's Data Viewer for sites listed as "TEMP", to determine if any of these facilities need to apply for a TMSP or NEC.

Photos of Exposure Issues Found During FY23 NEC Site Inspections

In FY23, NPDES focused on finding unpermitted sites to send to TDEC, usually for TMSP coverage. NPDES discovered sites from staff notifications, illicit discharge investigations, SCM inspections, and while updating the database. One of the sites was a bus terminal with maintenance facilities that had altered SCMs, was grading without a permit, and found to have exposed diesel fuel and other automotive fluids. NPDES worked quickly with the site and TDEC to ensure proper TMSP coverage was obtained, and exposed contaminants were eliminated. NPDES plans to continue routinely searching for unpermitted sites in future years.

Photos of Unpermitted Grading/Filling and Exposed Automotive Fluids

In previous years, when NPDES found significant issues during industrial inspections, follow-up letters were issued to the facilities requiring them to submit a Correction Action Plan (CAP). The timeframe for NPDES reinspecting these sites to review the facility's corrective actions varied. In FY23, NPDES changed internal procedures to ensure these facilities are reinspected within 6 months from the due date of the CAP to verify all corrective actions were performed. This will further allow NPDES to determine if the controls put in place by the corrective action plans are being maintained and remain effective. The first site to be subjected to this new timeline was a waste transfer station that had long-term ponding in their detention pond as well as sludge discharging from the outfall. At the reinspection, the site's controls appeared well-maintained as the detention pond was no longer holding water, and the outfall appeared clean.

Before and After Photos of Outfall at the Waste Transfer Station

## Public Education:

As Metro Nashville continues to grow at a record pace with new residents moving here from different parts of the country, NPDES believes public outreach is one of the most important actions of the MS4 program. In FY23, NPDES continued to expand its public outreach activities as opportunities presented themselves. The below paragraphs highlight some of the specific public education activities that were conducted during FY23:

## Rain Barrel Sale

In FY23, NPDES contracted Rain Water Solutions to provide 945 subsidized rain barrels for Davidson County residents. The sale was open from March 25<sup>th</sup> to May 21<sup>st</sup> with the pickup event at Nissan Stadium on June 3<sup>rd</sup>. Residents came from all over the county to pick up their barrels. These residents will be able to reduce stormwater pollution and runoff as well as use the barrel to complete their Tennessee Smart Yard (TNSY) Certification. Those who purchased rain barrels were sent an email to follow up on their experience with the sale and pickup event while also encouraging them to certify their yard as a TNSY. The response was overwhelmingly positive and supportive with one customer stating, "The whole pickup took less than 5 minutes. It went so smoothly, we were stunned" while another wrote, "Thanks for all you do for our city and our environment". NPDES also purchased 24 rain barrels to be used in a monthly rain barrel giveaway for Metro Nashville residents during FY24 and FY25.

Photos of the Rain Barrel Pickup Event on June 3, 2023

FY23 Annual Report (Page 10)

#### • Lawn and Garden Show

During FY23, NPDES attended the last Lawn and Garden Show at the Nashville Fairgrounds. Urban Forestry staff partnered with the Metro Tree Advisory Committee and the Metro Beautification and Environmental Commission to give away 2,554 tree seedlings (Oak and Crabapple). Music City Gold (biosolid pellets) samples were given out along with brochures for the Emerald Ash Borer (EAB) Epidemic. NPDES' Jennifer Smith delivered three EAB presentations to discuss the impact of the epidemic on Nashville's urban canopy. NPDES also shared a community table with the Zero Waste department where approximately 300 Black-Eyed Susan seed packets were distributed with TNSY information. The Master Gardeners created a display garden featuring TNSY. Because the Lawn and Garden Show has been discontinued, NPDES has plans to find alternative events to reach Nashville residents in FY24.

Photos of the Tree Seedling Booth and the TN Smart Yards Display Garden

## Social Media Posts

A Man. A

In FY23, NPDES expanded stormwater messaging on MWS social media platforms. MWS routinely updates Facebook, Twitter, Instagram and NextDoor posts, which has proven to be an effective method in reaching the growing number of our citizens and stakeholders who get most of their news from the various social media platforms. A benefit to using social media to distribute public education messages is that actual audience sizes can be calculated in terms of reach. NPDES has also begun tracking engagement rates (likes, comments, shares, etc.) to distinguish between reach due to passive scrolling versus active engagement, the latter being a better measurement of knowledge gained. Focusing on these trends will help NPDES staff create social media posts that will receive more engagement, which can also cultivate a better sense of community through social media. NPDES staff created posts highlighting the different programs within NPDES (SCM inspections, Urban Forestry, etc.) and multiple social media campaigns that informed the public about pollution prevention tips, events, or workshops offered by NPDES staff. During March 2023, NPDES posted an illicit discharge campaign aimed to teach residents what is considered an illicit discharge, how to avoid illicitly discharging, and how to report water pollution to NPDES. This campaign was chosen due to the large percentage of illicit discharges investigations that begin due to citizen reports. The campaign resulted in 5,383 impressions totaled from 16 posts across 3 platforms. In May 2023, NPDES created a new social media plan to be implemented in FY24 that will allow NPDES staff to reach the target audience more effectively while not inundating followers with posts. Inundation can lead to poor engagement as seen in the illicit discharge campaign that had reduced impressions and engagement compared to non-campaign posts that month. Refer to Section 4 of this document for more examples of stormwater-specific posts during FY23.

|           | Number of<br>Posts | Reach   | Total<br>Engagements | Engagement<br>Rate |
|-----------|--------------------|---------|----------------------|--------------------|
| Facebook  | 67                 | 28,478  | 531                  | 1.86%              |
| Instagram | 41                 | 10,496  | 578                  | 5.51%              |
| Twitter   | 90                 | 35,473  | 951                  | 2.68%              |
| NextDoor  | 7                  | 32,914  | 77                   | 0.23%              |
| Total     | 205                | 107,361 | 2137                 | 1.99%              |

Table of Metrics from Stormwater Social Media Posts for FY23

## Metro's Adopt-A-Stream Program

For many years, MWS has been coordinating with the Cumberland River Compact (CRC) to facilitate the Adopt-A-Stream program. The program provides an opportunity for local businesses, civic groups, watershed associations, churches, schools, etc. to work together in protecting and enhancing the watershed in which they live or work. Stream adoptions last for a period of 2 years, and adopters are required to do at least one stream clean-up per year. During FY23, the CRC signed up or renewed contracts with 5 new and renewing adopters bringing the total number of stream segments adopted to 33 (29.2 adopted miles), and there were 23 stream cleanups or education events in which 329 volunteers collected 218 bags of trash.

Adopt-A-Stream Site Locations in Davidson County and a Photograph of One of the Clean-up Activities during FY23

## <u>Tennessee Smart Yards Program</u>

A Mana .....

In 2021, NPDES adopted/partnered with the community-driven TNSY Program that aims to educate and empower residents to create environmentally friendly landscapes that reduce stormwater runoff, prevent erosion, and enhance habitat for native wildlife. TNSY, a partnership between county stormwater agencies and Extension offices, is a free stormwater pollution prevention program that teaches residents specific actions that they can take at home while providing the MS4 with measurable results such as the number of yards certified or actions taken. NPDES staff presented at multiple workshops on non-point source pollution prevention methods and provided informational materials for residents to assist them in applying these practices to their own yards while also encouraging TNSY participation. Through an analysis of participant quotes, recurring themes relating to the impact of TNSY include increased native plantings, reduced stormwater runoff, improved yard management, awareness and education, and community engagement. A Smart Yard Actions Poll was utilized at several public education events from April 29th to June 27th, 2023, where polltakers indicated how many of the certifiable actions they already take in their yard. This poll was used to show residents how close they are to completing the TNSY certification and to inform NPDES on what barriers prevent certifications. Certified yards in Davidson County receive a free tree from Root Nashville, a free bag of Music City Gold fertilizer, and a free yard sign to raise awareness and inspire neighbors to follow suit. During FY23, 54 yards were certified as TN Smart Yards bringing the total number of certified yards in Davidson County to 132, nearly 25% of certified yards across the state. Refer to Section 4 for a list of the certified yards in FY23, the actions taken by these certified yards, and an analysis of the Smart Yard Actions Poll responses, which includes possible recommendations for FY24.

#### Metro Nashville MS4 Permit: TNS068047 FY23 Annual Report

## A Map of TN Smart Yard Certifications in Davidson County during FY23 and an Example Social Media Post Promoting TN Smart Yards.

<u>School and Youth Education Program</u>

The NPDES school and youth education program is aimed at exposing residents to stormwater best management practices while they are young to ensure they understand the importance of water quality and critical infrastructure maintained by MWS. NPDES school education programs allow students to experience the stormwater system firsthand. Students are actively engaged by having to explain the stormwater system and propose solutions to stormwater issues. Refer to Section 4 for details regarding summer camps, loaner programs, SCM experiences, recruitment efforts, and facility tours. Some of the highlights from the FY23 school and youth education program are listed below:

- NPDES partnered with summer camps that include lake/creek activities (Owls Hill, TWIG, and Sail Summer Camps) to teach campers about non-point source pollution using the Enviroscape Models. At the end of the hands-on activity, campers were able to name common sources of pollution and provide recommendations on how residents can reduce pollutants.
- NPDES implemented a pilot loaner program with the Watershed Game, a collaborative, decision-based activity that helps students understand the relationship between land uses in a watershed, water quality, and their community. Feedback from the pilot program will allow NPDES to expand the loaner program in FY24.
- Urban Forestry partnered with Inglewood Elementary, Stanford Montessori Elementary, Two Rivers Middle, John Overton High, and McGavock High to host tree plantings that will contribute to the Root Nashville goal of 500,000 trees planted by 2050.
- By increasing the partnership with the Shelby Bottoms Nature Center, NPDES is able to facilitate hands-on learning via a loaner program with the Enviroscape model in addition to research projects. For example, students from John Overton High's engineering class designed improvements to the Nature Play which included information about the wetlands at Shelby Park.
- NPDES has increased tours of MWS' facilities including the Whites Creek Wastewater Treatment Plant, the K.R. Harrington Water Treatment Plant, and the Biosolids Facility. These tours allow students to have a better understanding of critical infrastructure as well

as give insight to potential careers with MWS. NPDES also facilitates job shadowing and classroom career programs to aid in recruitment of future MWS employees.

Photos of a Hydrant-Flushing Demonstration for Job Shadow Students and Tree Planting at Inglewood Elementary

## NPDES Watershed Group Accomplishments.

## Watershed StoryMap Website:

In previous years, a watershed management website (StoryMap) was created to inform the public of the many MWS programs that are in place to protect Metro's watersheds as well as data that is specific to each watershed. During FY23, the website was accessed 549 times.

## Urban Waters Report Card Development:

MWS has been working in conjunction with other Tennessee MS4s and the Tennessee Water Resources Research Center (TNWRRC) on the development of the Urban Waters Report Card. The Urban Waters Report Card will have a scoring system that evaluates streams in four categories: Water Quality, Hydrology, Stream Corridor and Community Values. This grading system will enable improved prioritization of stream restoration projects as well as better illustrating improvements in water quality over time. Collaborators are currently in the beta-testing phase of the project and are working to finalize the SOPs for each score in FY24.

## Macroinvertebrate Field QC with TDEC Staff

On October 19<sup>th</sup>, 2022. Watershed Group members Mary Bruce and Veronica Logue met with Joel Worsham (TDEC field biologist) in Manskers Creek for the purpose of reviewing quality assurance/quality control (QA/QC) measures of NPDES field sampling procedures. He observed a habitat assessment and chemical sample collection and, ultimately, approved of NPDES sampling protocols.

## Trash trap on Sevenmile Creek

A Mana

The NPDES Watershed Group worked in partnership with the CRC to install a trash trap in Sevenmile Creek on a MWS FEMA floodplain buyout property. As a result, CRC staff were able to remove approximately 64 bags of trash and recycling from the trap in FY23. In future years, NPDES anticipates deployment of an additional trash trap in North Fork Ewing Creek segment.

Photos of the Trash Trap Located on Sevenmile Creek

FY23 Annual Report (Page 16)

#### **Floodplain Buyout Properties**

The MWS Stormwater Division has been participating in the Federal Emergency Management Agency (FEMA) home buyout program for more than 24 years to restore floodplain storage and riparian habitat in various watersheds within Metro. Since MWS began participating in the home buyout program, Metro has purchased over 494 floodplain properties (over 230 acres) in which structures and other impervious surfaces such as driveways have been removed. In FY23, MWS staff coordinated the purchasing and/or home removal of 9 floodplain properties. For most of the restored floodplain parcels, Metro has ceased mowing areas directly adjacent to streams, allowing riparian buffers to naturally reestablish. MWS Stormwater has also coordinated the plantings of hundreds of native trees and shrubs within many of these floodplain properties. Many of the buyout sites are adjoining parcels within the same floodplain, resulting in the restoration of large continuous tracks of riparian floodplain. Some of these floodplain properties also provide recreational value to local neighborhoods as they are now managed and protected by the Metro's Parks Department.

Google Streetview Photos of a Floodplain Buyout Property from 2008 and Current Day

## Watershed Improvement Fund

One of the most proactive elements of Nashville's MS4 permit compliance programs is the implementation of the Watershed Improvement Fund (WIF), which is a dedication of certain stormwater user fee funds to implement projects that are specifically designed to improve the quality of stormwater runoff in various watersheds.

In previous permit years, Metro Nashville completed the following large-scale water quality projects:

 <u>Pitts Dog Park Bioretention Basin</u> - This basin is specifically designed to capture as much runoff as possible to reduce the elevated levels of *E. coli* and nutrients discharging into nearby Sorghum Branch, which is listed as being impaired for pathogens on the Tennessee 303(d) list. After construction was completed, NPDES purchased ADS ECHO flow monitoring devices and placed them in upstream and downstream junction boxes to measure the success of runoff captured/contained. NPDES will include a summary of the monitoring data in FY24.

Photographs of the Pitts Park Bioretention Basin During and After Construction

 <u>Whites Creek Bank Stabilization</u> – NPDES worked with a local landowner and the National Resources Conservation Services (NRCS) Emergency Watershed Protection program (EWP) to receive partial reimbursement grant funding to stabilize approximately 100 linear feet of Whites Creek that was suffering from severe erosion that threatened a MWS Sanitary Sewer main.

## Photographs of the Whites Creek Bank Stabilization Project Before and After Construction

 <u>Manskers Creek Bank Stabilization</u> – NPDES also completed a bank stabilization project on approximately 320 linear feet of Manskers Creek along the northern boundary of Davidson County. The project also involved partial reimbursement through the NRCS EWP and Tennessee Department of Agriculture (TDA) 319 program. The project involved the utilization of an innovative engineering articulated concrete project that provided hard armoring, while allowing vegetation to establish along the bank.

FY23 Annual Report (Page 18)

Photographs of the Manskers Creek Bank Stabilization Project Before and After Construction

 <u>Edwin Warner Riparian Buffer Restoration</u> – NPDES coordinated with the Metro Nashville Parks and Recreation Department (MNPR) to remove several thousand square feet of impervious surfaces (picnic pavilions and associated parking areas) situated in the floodway for the Little Harpeth River. NPDES funded the removal of the impervious structures in FY22, which was the first phase of a larger project. The second phase of restoring the riparian buffer to the Little Harpeth River was completed in FY23 by MNPR, through a collaborative effort with the Friends of Warner Park and the Cumberland River Compact.

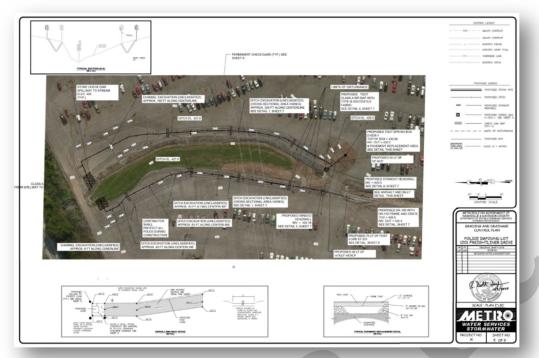

Photographs of the Tree Plantings in the Riparian Buffer Restoration Project at Edwin Warner

In FY23, NPDES performed necessary pre-project coordination for the large Police Impound Lot Stormwater Retrofit Project. In the previous year (FY22), NPDES was notified that the project may qualify for Environmental Protection Agency (EPA) 66.447 Sewer Overflow and Stormwater Reuse Municipal Grant Program. In FY23, MWS continued coordination with TDEC and formally applied for funding reimbursement through this grant program. MWS worked closely with TDEC to get an approved contract during FY23, which involved updating contractor bid requirements to grant standards and passing the approved contract through Metro Council. At the time this report was prepared, MWS was working to finalize all accounting approvals per the TDEC grant contract. The project is expected to be fully constructed by the end of FY24.

FY23 Annual Report (Page 19)

Engineer Design for the Police Impound Lot Stormwater Retrofit Project

## Stormwater Control Measure Inspection and Maintenance Compliance Program:

At the time this report was compiled, Nashville had inventoried 7,229 post-construction stormwater control measure structures (SCMs) that have been built to treat stormwater runoff from the developed environment as required by grading permit regulations. These structures include older dry detention ponds, wet retention ponds, water quality vaults, and the relatively new "green features", such as bioretention basins, infiltration trenches, and pervious pavement. NPDES began expanding its program personnel to devote more resources to SCM inspection services in 2017. NPDES's current work plan includes three personnel dedicated to inspecting SCMs and coordinating with property owners to ensure these structures are being properly maintained in addition to one supervisor that oversees the work done by the inspectors and coordinates with Metro/Non-Metro entities to advance the SCM oversight program. NPDES also has one administrative staffer receiving and documenting ownersubmitted annual maintenance reports. In FY23, NPDES began the second cycle of proactive SCM inspections under the expanded program. This second cycle focuses first on priority sites that have not been inspected since the project has been completely constructed or have not been inspected by Metro within the last 5 years. After the priority sites are inspected, NPDES plans to reinspect all other sites that were inspected during the first cycle.

Map of the 7,229 Regulated SCMs within Davidson County

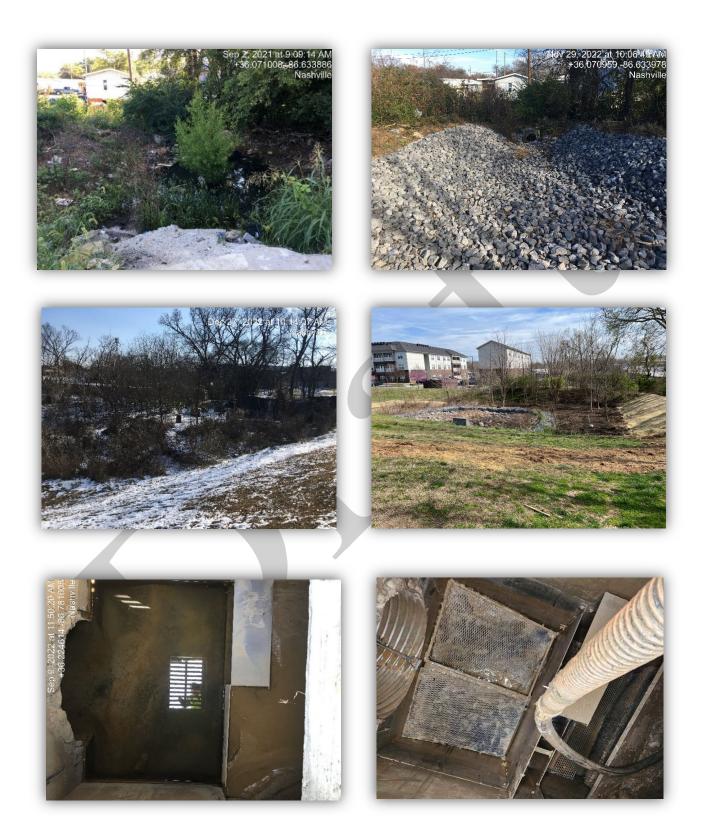

During the first year of the second cycle of the expanded NPDES SCM oversight program, NPDES performed inspections and/or re-inspections of nearly 2,109 SCM structures. NPDES received an additional 136 owner-submitted annual inspection reports, which has dramatically increased from previous years. As a result of the inspection findings, NPDES issued 596 notices to property owners informing them of neglected maintenance needs. While some notices are in verbal or email form, the majority of the 596 notices issued were detailed letters that include inspection findings, a copy of the engineering plans/maintenance agreements, and photographs of the compliance issues. During FY23, four enforcement notices were issued when SCMs were discovered to have been intentionally altered or when SCMs were found to be non-functional with property owners failing to respond to the initial notification letters. In addition to inspecting all the privately-owned SCMs, NPDES continues to inspect all the Metro-owned SCMs once a year between January and March. NPDES used to rely on other Metro Departments to inspect their own SCMs for maintenance needs, which was determined to be an inconsistent and inefficient process. NPDES now inspects over 309 grading permit-installed SCMs on Metro properties once a year and coordinates with each department on the maintenance needs with a focus on getting the major listed SCMs on Metro properties into compliance. Since NPDES expanded the SCM oversight program in 2017, the list of private companies that specialize in SCM inspection and maintenance in the Metro area has grown from 18 to over 30, which has allowed our increased notifications to properties requiring SCM maintenance actions to be more easily resolved.

NPDES continues to grow the expanded SCM oversight program to ensure SCMs are maintained and operating efficiently to sustain/improve water quality within Davidson County. Some of measures being undertaken in FY24 include the following:

- Improvements to the Notice of Inspection report that should hold sites more accountable for performing maintenance on their SCMs.
- Development of an inspection/enforcement policy for buffer zone regulations.
- Coordination with Development Services staff to ensure sites are able to maintain SCM compliance and are aware of the structures on their properties.
- Research how to inspect and maintain filter/media water quality units correctly and efficiently.

Each year, NPDES coordination with property owners on SCM inspection and maintenance requirements results in hundreds of previously un-maintained SCMs being restored to functional structures. Some of the successful SCM rehabilitations in FY23 are shown in the photos below:

Photographs of SCMs Before and After Maintenance as a Result of NPDES Coordination

#### Urban Forestry Program and Soil and Water Conservation Programs within Stormwater

In 2018, Metro Nashville launched Root Nashville, a campaign to plant 500,000 trees by 2050. Root Nashville is a public-private partnership between the City of Nashville and the Cumberland River Compact, a local water quality-based non-profit that manages the daily operations of the campaign. To date, over 36,000 trees have been planted and counted towards the campaign. In order to help meet Root Nashville's goals and improve the management of Nashville's urban forest, the mayor placed the responsibility for the coordination of urban forestry efforts within the Metro Water Services, Stormwater NPDES Section. The responsibilities of this program involve overseeing a street tree inventory and interdepartmental tree meetings, managing the Emerald Ash Borer response, assisting Metro Council with tree legislation, and helping Metro lead by example in tree planting and management on their own properties.

Metro Water's urban forestry staff added an arborist in 2020, a horticulturalist in 2021, and two additional arborists in 2022. They planted over 1,500 trees in FY23 and are planning plantings in the right-of-way (ROW) and at Metro schools this fiscal year. The cyclical maintenance cycle that began last year for ROW trees was expanded this year. Over 850 trees were pruned and/or fertilized in FY23. Metro's Water's urban forestry group is concentrating on street trees to help mitigate stormwater runoff from Nashville's streets and sidewalks. NPDES is planning to expand their urban forestry efforts and capacity over the next few years to increase the benefits provided by Nashville's trees.

#### **Davidson County Soil and Water Conservation**

The Davidson County Soil and Water Conservation District was established in 1946 as a subdivision of the state government. The mission of the Davidson County Soil and Water Conservation District has been to provide conservation planning, education, information, and technical assistance to landowners, groups, and units of government, so they can enhance and benefit from the proper management of our natural resources. In 2018, this program was moved to the MWS Stormwater NPDES Office due to the common goals of the programs and operational efficiencies.

The Soil and Water Conservation Program is complimentary to the NPDES program as they perform various functions such as educating local landowners on soil and water conservation practices including livestock management processes that reduce impacts to water resources and local watersheds from certain landowner farming activities. In addition, the program also provides technical assistance to landowners on conservation techniques, specifically by offering cost share funds allocated from Tennessee Department of Agriculture and USDA/NRCS for best management practices for Davidson County Watersheds. The Conservation programs reduce soil erosion, enhance water supply, improve water quality, increase wildlife habitat, and reduce damages caused by floods and other natural disasters. This program is unique in that it promotes the installation of best management practices that can directly benefit water quality runoff from private property.

This realignment of departments paid dividends, as the Soil and Water Conservation Program identified the potential for the NPDES program to qualify some of the WIF projects for NRCS EWP funding when critical infrastructure is being protected. As mentioned earlier, NPDES utilized this new knowledge to implement the design and construction coordination on two streambank stabilization projects on Whites Creek and Manskers Creek. By seeking partial reimbursement of funds, NPDES will be able to leverage more of the WIF funds toward other water quality improvement projects.

# Water Quality Improvement Project (WQIP) Cooperation with the Cumberland River Compact:

In 2020, MWS entered into a new cooperative agreement with the non-profit organization Cumberland River Compact (CRC) to perform a variety of water quality improvement projects throughout various Metro sub-watersheds. This relationship with CRC started ten years ago when MWS entered into an agreement with them to assist in performing Supplemental Environmental Projects as required from the EPA Consent Decree for MWS' sanitary sewer collections system. MWS has extended this agreement even after the consent decree SEP as it has been identified as having a huge benefit for water quality. The WQIP agreement gives MWS the ability to leverage work being performed on private land to improve water quality and provides for even more engagement and education opportunities for Nashville citizens in water stewardship activities. With MWS' commitment of \$375,000 in funding, the following bullets include just some of the deliverables that will be accomplished each year of the 5-year agreement:

- 1,500 trees planted on floodplain buyout properties.
- Converting approximately 4,000 square feet of turf to stormwater infiltration zones
- Planting 500 trees in Davidson County in support of the Root Nashville Program
- Conducting one neighborhood de-paving project to promote stormwater infiltration.
- Constructing 10 rain garden builds
- Stabilize 50 linear feet of stream banks per year.
- Reach over 2,000 citizens with direct education on water quality and green infrastructure.

Specific WQIP accomplishments to-date can be found in Section 4 of this document.

#### 1.3.2 Other Metro Department Activities:

In addition to MWS Stormwater Division activities, many other Metro Departments perform critical roles in promoting improved stormwater quality runoff throughout Metro government.

#### Metro Parks and Recreation Department

Metro Nashville Parks and Recreation Department (MNPR) has been a key player in improving stormwater runoff and riparian habitat on Metro properties. Below are some of the major MNPR activities that have either been performed or are planned that serve to improve the quality of stormwater runoff:

<u>Environmental Education Programs</u> - Metro Parks Nature Centers have a direct and valuable positive impact on water quality and conservation through its environmental education programs, interpretive exhibits, green facilities, and watershed protection. It is estimated that as many as 600 visitors participated in water-themed volunteer projects, field trips, etc. at the Nature Centers. In addition, more than an estimated 200,000 park visitors were exposed to water resources education through educational exhibits at the four Metro Parks nature centers. Each of these nature centers also feature amenities that conserve water resources and provide passive education opportunities to visitors. These include green roofs, water chains, rain barrels, teaching ponds, stream bank restoration areas, pervious paving materials, rain gardens and cisterns.

<u>Parks Land Conservation</u> - The majority of Parks and Recreation Department's 14,000 plus acres and over 60 miles of greenway corridor have continued to be maintained in a natural condition, providing vitally important protections to our watersheds, including many critical headwater streams. Each year MNPR plants many trees on a variety of parks properties. In FY23, Parks worked to convert many previously-mowed areas to no-mow zones that will allow increased stormwater treatment on many acres of Parks-owned lands.

#### Nashville Planning Department:

Nashville's Planning Department focuses on sustainable development as described in the Community Character Manual, which encourages sustainable development and preservation in Nashville/Davidson County's fourteen community plans that guide future land use entitlements and infrastructure decisions. A foundational principle of the Community Character Manual is the commitment to create sustainable communities through sustainable development. Key strategies include actions to address each property's unique location and geographic features, while avoiding sensitive environmental features. This benefits the community by protecting water quality as well as reducing the impact of development on surrounding infrastructure and the community through the use of best practices in stormwater and wastewater management. In addition, the Community Character Manual includes objectives of the EPA and Metro Nashville's Stormwater Management Program, such as incorporating green infrastructure, protecting steep slopes and headwater areas, minimizing and/or recovering floodplain loss, and

retaining or re-creating natural stream buffers. The Community Character Manual also includes a section of general principles which highlights the importance of minimizing the impact of development on the natural environment, especially air and water quality, and of integrating green space in developments for preservation, recreation, and healthy lifestyles.

In 2015, the Planning Department completed the city's update to Nashville's General Plan, which was created with city-wide community involvement and input. The process is referred to as NashvilleNext and is the vision and priorities for Nashville/Davidson County for the next 25 years. NashvilleNext includes a Growth & Preservation Concept Map that encourages additional development along the city's corridors and in mixed use centers, while preserving rural areas and areas of sensitive natural features.

One of the four foundations of the plan is a healthy environment. In addition, one of the seven principles in NashvilleNext is to champion the environment. NashvilleNext discusses the importance of how we as a city:

- Build a community founded on land and water conservation, preservation of sensitive environmental conditions, and sustainable development practices.
- Promote efficient transportation and well-designed neighborhoods to achieve healthy living, preserve the natural environment, and encourage resiliency and safety in the face of natural and manmade disasters.
- Sustain the ecological function, resource value, and character of sensitive environmental and rural lands.
- Bring nature into the city through parks, greenways, a healthy urban forest, and clean streams, creeks, and rivers.
- Leave future generations an environment that is healthier than today's.

On a day-to-day basis, having quality natural areas betters the quality of life for people, plants, and animals. Nashville's current and projected population growth could degrade the current quality of life and jeopardize Nashville's natural and built environment. In addition to the pressure of sheer growth, demographic changes—such as the growth of Baby Boomer and Millennials seeking more compact, walkable communities and the increase of single-person households and different household composition—will also drive new locations and forms of development in our communities. A renewed emphasis on public outreach, education, and personal responsibility will activate new stewardship to conserve energy, eliminate and reduce waste, preserve land, build high-performance buildings, and create a culture of sustainability. Meanwhile, public policies, incentives, and private decision-making must provide a clear direction on what to preserve and how to build and grow our city in a more sustainable fashion than we do today. This will enable us to secure the best Nashville for current and future generations.

NashvilleNext contains seven plan elements. Nashville/Davidson County's natural resources area discussed in three elements—Natural Resources & Hazard Adaptation; Health, Livability & the Built Environment; and Land Use, Transportation & Infrastructure. Each element discusses goals, policies, and actions that guide Nashville's future. Relevant element goals, policies, and actions include to:

- Conserve natural resources in order to mitigate floods and other natural hazards, ensure clean air and water, raise food locally, provide outdoor recreation, and preserve Nashville's culture and character.
- Invest in and increase Nashville's natural environment for beauty, biodiversity, recreation, food production, resiliency, and response to climate change through mitigation and adaptation strategies.
- Preserve Nashville's existing tree canopy, including urban trees, street trees, groves of mature trees, and larger tracts of forested lands.
- Enjoy (all communities) equally high levels of environmental protection, equitable access to nature, and opportunities to improve their health and quality of life.

FY23 Annual Report (Page 25)

A LOSS

- Conserve and efficiently use land, energy, water, and resources while reducing waste and pollution.
- Establish a wide-ranging green education campaign that focuses on the "why" and "how" for water conservation, energy efficiency and reductions, recycling and waste reduction, natural resources preservation, and outdoor activity.
- Ensure all communities have access to parks, green areas, cultural amenities, and recreation opportunities that support mental and physical well-being.
- Optimize sewer, water, stormwater, and other infrastructure within Nashville's centers and corridors to prepare for or coordinate with redevelopment. Use green infrastructure to reduce the need for upgrades and to improve streetscapes.
- Reduce the impact of construction on surrounding infrastructure and community through use of best practices in stormwater management, wastewater management, and reducing heat island effect and light pollution.
- Expand programs and institute more complete regulations to protect Nashville's sensitive environmental resources.

In 2021, the Planning Department began work on revisioning Second Avenue after the Christmas Day 2020 bombing as well as a visioning plan for the East Bank. Both areas are adjacent to the Cumberland River as it flows through Downtown Nashville. In previous decades, the Cumberland River has not been activated and incorporated into the city's vitality as it should be. Central to both these studies is activating our riverfront and highlighting the river, not only for the water functions it provides but also as an important component of our city's fabric and cultural resource, including stormwater absorption, green space, parks, greenways, and mobility options in crossing. In 2023, both Second Avenue and East Bank are in the implementation phase of coordinated development to bring the community visions to life.

The Planning Department continues its collaboration with Metro Parks and Greenways and the Land Trust for Tennessee by identifying properties that would be good additions to Nashville's open space network. This includes properties that are important to preserve for headwater areas, wildlife habitat, and water management in flood-prone areas.

The Planning Department meets on a daily basis with property owners and development professionals to discuss property ideas and projects. Potential projects affect watersheds, drainage and absorption patterns, and our city's numerous waterways. Planning staff discuss the importance of preserving sensitive environmental features and working within the natural features of each site and regarding them as community amenities, including features such as waterways, wet weather conveyances, drainage patterns, steep slopes, woodlands, riparian habitat, and mature trees. Where appropriate, Planning staff direct property owners and development professionals to continue those discussions with Metro Water Services and the Stormwater Division for additional guidance and ideas.

## MWS Engineering Division (Clean Water Nashville)

The MWS Engineering Division and the Clean Water Nashville (CWN) program oversees the overall functionality of the sanitary sewer systems and have worked diligently to minimize the volume of unintentional discharges of sanitary sewer overflow material to the MS4 and community waterways. MWS has dramatically increased its involvement on projects to reduce overflows from both the Combined Sewer System (CSS) and the Separate Sewer System (SSS) over the last 14 years. In previous years, the Mayor and Council approved a sewer fee rate increase, which increased the funding to implement future large projects to keep up with the unprecedented population growth, while reducing the potential for sanitary sewer overflows. Table 3 lists the major projects completed by the MWS Overflow Abatement Program (OAP), which serves to greatly reduce discharges of sanitary waste to the MS4 or area streams. Table 4 provides a list of future projects that are planned to be completed in future reporting years depending on funding availability. There were many projects planned and designed in FY23, and construction is expected to begin on many of those projects in FY24.

|                       | # of                     | Miles of       |              |  |

|--|-------------------|----------------|--------------------------------------|
| Type of Projects   | Sanitary<br>Lines | Money<br>Spent | Where Work<br>was Performed          |
| <b>Central Wastewater Treatment Plant - Capacity Improvements</b><br><b>and CSO Reduction:</b> The design process for improvements to the<br>CWWTP for Optimization, CSO reduction, and other improvements<br>began with the selection of two teams for Planning and Design and<br>engagement of a Construction Manager at Risk. Design began in<br>June 2017 and concluded in FY 2020. Construction began in July<br>2020 and will conclude in late FY2024. | N/A               | \$360M         | Cumberland<br>River                  |
| <b>Annual Rehabilitation - Bordeaux and Metro Center:</b> This project was developed to renew aging sewer infrastructure and address overflows by reducing the amount of rainfall that can enter the system through defects. Construction is anticipated to begin in FY2024.   | 4 miles           | \$8.4M         | Cumberland<br>River                  |
| <b>Dry Creek Area Pump Station Improvements:</b> This project was developed to upgrade five pump stations in the Dry Creek system to address overflows by increasing system capacity. Design will continue through FY2024, with staggered construction start dates.  | N/A               | \$55.5M        | Cumberland<br>River, Loves<br>Branch |
| <b>Henry Ford Rehabilitation:</b> This project was developed to renew aging sewer infrastructure and address overflows by reducing the amount of rainfall that can enter the system through defects. Construction is anticipated to begin in FY2024.   | 9.3 miles         | \$15.0M        | Sandy Creek                          |
| <b>Mill Creek - Collins Creek Rehabilitation - Area 1:</b> This project was developed to renew aging sewer infrastructure and address downstream overflows by reducing the amount of rainfall that can enter the system through defects. Construction is anticipated to begin in FY2024.   | 3.6 miles         | \$7.4M         | Collins Creek,<br>Mill Creek         |
| <b>Mill Creek - Collins Creek Rehabilitation - Area 2:</b> This project was developed to renew aging sewer infrastructure and address downstream overflows by reducing the amount of rainfall that can enter the system through defects. Construction is anticipated to begin in FY2024.   | 1.5 miles         | \$8.8M         | Collins Creek,<br>Mill Creek         |
| <b>Rowan Cravath Rehabilitation:</b> This project was developed to renew aging sewer infrastructure and address downstream overflows by reducing the amount of rainfall that can enter the system through defects. Construction is anticipated to begin in FY2024.   | 8.5 miles         | \$11M          | Whites Creek                         |
| <b>Rowan Cravath Gravity Sewer Upsizing:</b> This project was developed to increase the capacity of undersized aging sewer infrastructure that currently contributes a nearby overflow. Construction is anticipated to begin in FY2024.  | 0.6 miles         | \$4.7M         | Whites Creek                         |
| <b>Town Village Pump Station Upgrades:</b> This project was developed to upgrade the Town Village pump station to address overflows by increasing system capacity. Design will continue through FY2024 with construction being following easement acquisition.   | N/A               | \$5.5M         | Percy Priest                         |
| <b>Wallace Lane Rehabilitation:</b> This project was developed to renew aging sewer infrastructure and address downstream overflows by reducing the amount of rainfall that can enter the system through defects. Construction is anticipated to begin in FY2024.  | 10 miles          | \$8.9M         | Sugartree Creek                      |

## Table 4 – Future MWS Engineering Projects to Reduce Sanitary Overflows

Married Married

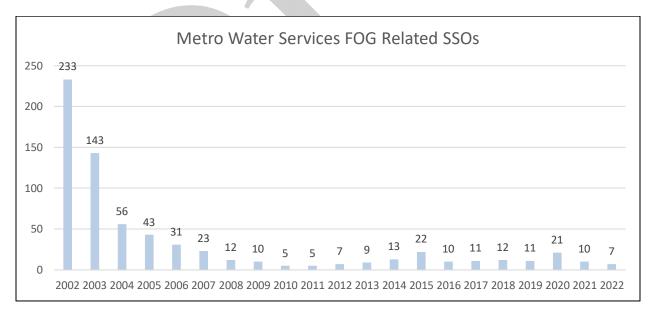

#### **MWS System Services Division**

The Metro Water Services System Services Division (SSD) and its contractors continue to inspect and clean sewers to assess conditions and prevent potential overflows. In FY23, SSD and contractors inspected with Closed Circuit TV (CCTV) approximately 821,467 linear feet and cleaned approximately 396,934 linear feet of Metro sewer line. During FY23, SSD continuously reviewed information from CCTV sewer inspection reports that indicated sewer problems with grease or roots. In some instances, letters were sent out to notify customers of roots or grease in their private service lines or main lines and recommend corrective actions to prevent private sewer overflows. The estimated/reported MWS sewer overflows for FY23 are depicted in Table 7H.5 within Section 3 of this report.

#### **MWS Environmental Compliance Section**

The MWS Environmental Compliance Section proactively inspects grease control equipment at food service establishments to ensure they are being maintained appropriately and functioning to prevent Fats, Oils, and Grease (FOG) from discharging to the sanitary sewer system. In the calendar year of 2022, MWS issued 129 Noncompliance Notifications (NCNs), to food service establishments for a variety of discovered failures in the grease control equipment that, if left uncorrected, could cause Sanitary Sewer Overflows (SSOs) to the MS4.

When FOG is identified as the primary cause of an SSO, Metro Water Services responds by investigating the possible FOG sources and issuing enforcement action notifications as necessary to prevent any future SSO events. For the year 2022, there were 23 SSOs identified as FOG related in which MWS Environmental Compliance performed follow-up coordination and education with the facilities or residences that could have been possible contributors. From the follow-up investigations, only 7 of the SSOs were confirmed to be caused by FOG. In 2022, there were 1,103 FOG educational handouts distributed. Metro Water Services Environmental Compliance personnel, or their FOG program contractor, meet with apartment, condominium, or duplex managers or owners regarding any FOG blockages and SSO problems that occur downstream from their facilities. In addition, MWS Environmental Compliance alerts MWS NPDES staff when issues are found during inspections that may be resulting in impacts to stormwater runoff. As a result of MWS Environmental Compliance efforts, FOG caused SSOs have been dramatically reduced over the years.

**What is the reporting period for this annual report?** The reporting period for this Annual report is from 07/01/2022 to 06/30/2023, which is the 12th reporting period under the current permit. This Annual Report coincides with Metro's Fiscal Year 2023 (FY23) activities. This annual report period took place after the permit's expiration date, which has been administratively extended for Metro to continue to perform all MS4 Permit activities detailed within the permit.

## 2. Protection of State or Federally Listed Species

A. Do any of the MS4 discharges or discharge-related activities likely jeopardize state or federally listed species

B. Please attach the determination of the effect of the MS4 discharges on state or federally listed species per subpart *Endangered Species Assessment included in Attachment A.* 

## 3. Water Quality Priorities

A. Does your MS4 discharge to waters listed as impaired on your state **X** Yes  $\Box$  No 303(d) list?

B. If yes, identify each impaired water, the impairment(s), whether a TMDL has been approved by EPA for each, and whether the TMDL identifies your MS4 as a source of the impairment *(See below Checklist)*. *The below list represents the approved 2023 list.* 

| Impaired Water  | Impairment  | Approved TMDL | MS4 Assigned<br>to WLA |  |

C. What specific sources of these pollutants of concern are you targeting?

Pathogens (pet waste, sanitary sewer leaks), siltation (construction sites), oil & grease (industries/commercial sites), and nutrients (pet waste, sanitary sewer leaks, fertilizer application)

D. Do you have discharges to any Exceptional TN Waters (ETWs) or Outstanding National Resource Waters (ONRWs)?

A large portion of Metro drains to Mill Creek, which is listed as an ETW due to the presence of the federally endangered Nashville Crayfish (Faxonius shoupi). A portion of the Harpeth River in Davidson County is listed as a State Scenic Riverway.

E. Are you implementing additional specific provisions to ensure the continued integrity of ETWs or ONRWS located within your jurisdiction?

Specific public education activities have been implemented in the past for certain residential areas that drain to the Harpeth River and commercial/industrial areas that drain to Mill Creek. Nutrient and pathogen reduction education has been and will be focused on that area. The Stormwater Maintenance Sections and the MWS Sanitary Sewer Division have been trained on limiting in-creek excavation work within the Mill Creek watershed. Metro also implements a robust construction oversight program to prevent excess sediment from draining to these high valued waterways.

X Yes □ No □ N/A

□ No

X Yes

#### 4. Public Education and Public Participation

A. Is your public education program targeting specific pollutants and sources of those pollutants? X Yes  $\Box$  No

B. If yes, what are the specific causes, sources and/or pollutants addressed by your public education program?

Pathogens (pet waste), siltation (construction sites), nutrients (residential lawn maintenance & pet waste), and oil & grease (commercial/industrial facilities).

C. Note specific successful outcome(s) (NOT tasks, events, publications) fully or partially attributable to your public education program during this reporting period.

During the reporting period of FY23, NPDES performed many activities to increase public education and awareness for many diverse stormwater issues, all of which are detailed in Section 4 of this document. In particular, NPDES expanded utilization of social media platforms to educate a growing number of citizens and stakeholders about stormwater issues and pollution. Four main social media platforms (Facebook, Twitter, NextDoor, and Instagram) were utilized to reach local citizens. Typical content of the posts focused on drawing the connection of storm drains to our local water resources to encourage the general public to work towards reducing pollution. Various types of visual media were used to depict the kinds of pollutants that can end up in our streams and how Metro residents can do their part to reduce it. Pollutants that were specifically targeted included lawn chemicals, lawn wastes, pet waste, and general trash. In particular, during FY23, MWS issued a total of 205 stormwater-related posts that reached 107,361 viewers. NPDES also continued to perform specific stormwater topics at various venues, distributing neighborhood-specific door hangers, sending out email notices, etc. During FY23, NPDES reached an estimated audience size of 7,474 with these direct educational techniques.

D. Do you have an advisory committee or other body comprised of the public and other stakeholders that provides regular input on your stormwater program?

Metro has a Stormwater Management Commission (SWMC) that reviews cases where development/redevelopment activities are unable to meet specific provisions of the stormwater regulations and hears appeals of violation decisions by the Director's office. The members of the commission are appointed by the Mayor's office. The SWMC monthly meetings are televised on Metro's Local Channel 3 which provides visibility of Metro stormwater matters as well as public education.

X Yes 🛛 No

E. Provide a summary of all public meetings required by the permit.

Metro has various agencies that perform projects involving public meetings. For example, the MWS Stormwater Remedial Maintenance Section holds meetings for certain large-scale maintenance projects on an as-needed basis. MWS maintains a webpage for all large Metro construction projects. The Metro General Services Department holds various public meetings for large Metro Development activities. In addition, the Metro Planning Commission provides numerous opportunities designed to receive feedback from the general public or other stakeholders on a routine basis. Information on public meeting opportunities can be found at the following website link:

https://www.nashville.gov/departments/water/news

A LOSS ....

https://www.nashville.gov/departments/water/projects

https://www.nashville.gov/departments/planning/boards/planning-commission/meetings

FY23 Annual Report (Page 37)

MWS Stormwater also specifically facilitates monthly meetings with the Stormwater Management Commission for sites appealing specific stormwater regulations. These meetings are available for the public to view and/or attend and comment and are advertised on the internet and at the property in question with a standard public notification sign. During the reporting period, Metro Stormwater facilitated 8 separate SWMC meetings. More information about the SWMC process as well as meeting minutes from each meeting is available at the following website:

https://www.nashville.gov/departments/water/boards/stormwater-management-commission/meetings

#### 5. Codes and Ordinances Review and Update

A. Is a completed copy of the EPA Water Quality Scorecard submitted with this report? A copy of the scorecard was submitted in the FY12 annual report (First Year Yes X No of this current permit cycle).

B. Include status of implementation of code, ordinance and/or policy revisions associated with permanent Stormwater management.

MWS Stormwater has already developed and revised a new volume of the Stormwater Management Manual (SWMM) (Volume 5) dedicated to promoting/incentivizing the use of Low Impact Development (LID) techniques for post development stormwater management. In 2007, Metro was promoting/incentivizing the use of runoff reduction/100% pollution reduction practices, but still allowed development sites to utilize standard stormwater quality treatment practices of 80% total suspended solids (TSS) removal. In February of 2016, Metro revised the SWMM to require all development activities to pursue runoff reduction practices for stormwater quality treatment, unless certain site constraints were demonstrated to be present (i.e. high ground water table, clay soils, karst areas, brown fields, etc.). MWS Stormwater has developed a waiver process for sites that due to site limitations are requesting to revert to the standard water quality treatment practices. At the end of FY23, MWS had received 529 LID Waiver requests. As a result, a total of 403 of the requests were eventually approved (some with conditions). During previous years, MWS began revising the entire SWMM to improve the overall stormwater regulations of development, including updating some of the LID controls and requirements. The update to the SWMM became effective in November 2021, which is still in effect.

#### 6. Construction

| A. Do you have an ordinance or adopted policies stipulating:  |            |
|---|------------|
| Erosion and sediment control requirements?  | X Yes 🛛 No |
| Other construction waste control requirements?  | X Yes 🛛 No |
| Requirement to submit construction plans for review?  | X Yes 🛛 No |
| MS4 enforcement authority?  | X Yes 🛛 No |
| Have you developed written procedures for site plan review and approval?  | X Yes 🛛 No |
| Do the written procedures for site plan review and approval include an evaluation of plan completeness and overall BMP effectiveness? | X Yes 🛛 No |

Have you developed written procedures for managing public input on projects?

Metro Nashville manages public input in a variety of different ways throughout various departments. There are no written procedures for managing the public feedback as there are numerous departments involved with various projects. Please refer to the above section on public engagement on stormwater development projects. MWS also publishes a list of Metro construction projects that have received coverage under a TDEC Construction General Permit once a month, which is posted on the following Metro web page:

<u>https://www.nashville.gov/departments/water/news/public-notice-metro-construction-projects-within-davidson-county-10</u>.

Over previous years, Metro Nashville has also implemented an online forum called hubNashville for citizens to provide feedback or submit complaints, which can also be utilized to comment on Metro construction projects. Below is a link to hubNashville: <u>https://hub.nashville.gov/s/?language=en\_US</u>

 Have you developed written procedures for site inspection and enforcement?
 X Yes □ No

 Have all MS4 Inspectors maintained certification under the Tennessee Fundamentals of Erosion Prevention and Sediment Control, Level 1?
 X Yes □ No

 Have all MS4 site plan reviewers maintained certification under the Tennessee Fundamentals of Erosion Prevention and Sediment Control, Level 1?
 X Yes □ No

 Most of the engineers have taken the Level 2 training, however, a few of the newer engineers who have not taken the training have a Professional Engineer's (P.E)
 X Yes □ No

license, which also satisfies the MS4 permit requirement.

B. How many active construction sites disturbing at least one acre were there in your jurisdiction this reporting period?

Refer to attached Table 6B.1. In FY23, there were 255 grading permits issued, while 214 grading permit sites were completed (signed-off). Not all of the Grading Permits were for sites disturbing over an acre (requiring a TDEC General Construction Stormwater Permit). All sites that disturb over an acre are required to also obtain a grading permit and must have coverage under the State's General Construction Stormwater Permit prior to receiving a Metro Grading Permit. At the end of FY23, there were 943 active grading permits as Metro requires permits for grading over 10,000 square feet (and certain other criteria per Chapter 3 of Volume 1 of the Metro SWMM).

C. How many of these active sites did you inspect this reporting period?

NPDES Section performed 9,597 construction-related inspections in FY23. The inspections were performed on Grading Permit sites under construction and complaint inspections of construction activity without permits. In addition, MWS Stormwater also provides oversight and guidance to small residential construction activities usually with total disturbed area of less than 10,000 square feet (not requiring a standard Metro grading permit). Refer to the attached Table 6C.1 for small construction project oversight numbers.

D. On average, how many times each, or with what frequency, were these sites inspected (e.g., weekly, monthly, etc.)?

Monthly

☐ Yes X No

(See Notes)

NPDES inspects all active construction sites at least once per month. Some sites become inactive and have no exposed soils. These sites are inspected on a less frequent basis (until the site reaches final closure).

FY23 Annual Report (Page 39)

#### E. Do you prioritize certain construction sites for more frequent inspections?

#### If Yes, based on what criteria?

All <u>active</u> permit sites with active grading are prioritized to receive inspections at least once per month. This meets and exceeds the permit requirement to perform monthly inspections of 303(d) listed siltation-impaired streams. Some sites may be awaiting final as-built reviews but are relatively stable. These sites do not receive the same level of priority inspections.

#### 7. Illicit Discharge Elimination

A. Have you completed a map of all known outfalls and receiving waters of your X Yes □ No storm sewer system?
 B. Have you completed a map of all known storm drain pipes of storm sewer

B. Have you completed a map of all known storm drain pipes of storm sewer X Yes □ No system?

#### C. How many outfalls have you identified in your system?

Metro has migrated several iterations of mapping updates of Stormwater infrastructure into our Metro Geographic Information System (GIS). During previous reporting periods, MWS Stormwater's contractor completed a project to re-delineate the outfall layer (grid by grid) with the focus of verifying "actual" MS4 permitted outfalls. While the focus was mapping MS4-permitted outfalls, NPDES also had the contractor create the following two outfall layers: 1) Sub-MS4 Outfalls – Outfalls within the MS4 system upstream of the discharge point to Waters of the State, but usually where two large systems combine; and 2) Private Outfalls – Point at which Stormwater from private properties drain to either Waters of the State or MS4. Currently there are 12,036 MS4-permitted Outfalls, 414 Sub-MS4 Outfalls, and 2,447 Private Outfalls mapped within Metro's GIS database. Please note that in determining the point at which MS4 outfalls drain to Waters of the State, NPDES had to assume the streams layer in GIS was an accurate representation of actual streams, even though the coverage is more of an estimate and has not been field-verified. Also, MWS Stormwater hired a contractor in FY23 to begin collecting more-detailed information on storm drains in certain watersheds as part of the overall Master Planning efforts. As part of the project, the contractor is field inventorying all stormwater drains that includes collecting invert elevations so future flood modelling can be performed. The field inventory work for the Master Planning efforts commenced in FY23.

D. How many of these outfalls have been screened for dry weather discharges?

In previous permit years, NPDES received approval from TDEC to implement a new form of field screening, where up to three commercial and industrial properties are screened within ½ mile grids for potential stormwater runoff issues such as exposed grease, waste materials, sediment, etc. Prior to this change, NPDES inspectors were required to look only at infrastructure points for potential illicit discharges, which was very time consuming and produced very few pollution reduction results. Refer to Attachment B for complete coordination on modifications to the field screening program.

During FY23, NPDES screened 213 separate ½ mile grids for potential stormwater runoff issues, which included looking at 395 separate business practices and/or infrastructure points.

E. How many of these have been screened more than once?

None are required to be screened twice per our new permit. However, if a non-stormwater/"illicit" flow is suspected, NPDES initiates an IDDE investigation that is documented within the Cityworks database until the illicit discharge is eliminated. When NPDES inspectors find site management issues, they initiate education actions with site management and usually return within a few days to determine if corrective actions have taken place. At the end of FY23, all of the commercial/industrial ½ mile grids were screened once. In FY24, NPDES will be re-screening the grids, prioritizing the hot areas first.

F. What is your frequency for screening outfalls for illicit discharges?

All 2,047 ¼ mile commercial and industrial-zoned grids were screened by the end of Year 5 of the MS4 permit (January 31, 2017). This requirement is no longer in effect with the approved modification to this program element per the administrative extension agreement. Despite this, NPDES is committed to continuing regular routine dry weather field screening practices, as the newly defined process has yielded very positive results. After year five of the permit, the field screening grid database was updated and NPDES began re-screening all the grids. NPDES completed a first screening of all these grids at the end of FY23.

G. Do you have an ordinance that effectively prohibits illicit discharges? X Yes □ No

H. During this reporting period, how many illicit discharges/illegal connections have you discovered (or been reported to you)?

In FY23, there were 3 confirmed significant illicit discharges in which NPDES issued a Notice of Violation and associated administrative penalty to the property owner. In addition to the confirmed illicit discharges, NPDES initiated 124 separate (non-construction) new water quality investigations during FY23, most of which, originated from citizen complaints. Refer to Table 7H.1 for a complete listing of the 124 IDDE investigations initiated during FY23. There were also 5 separate spill response-specific investigations and 5 sanitary sewer-specific discharge investigations initiated by NPDES during the reporting period (refer to Tables 7H.2 and 7H.3 respectively.) Please note that some spills and sanitary sewer overflow response activities are logged as general water quality investigations. In addition to NPDES water quality-related investigations, the Metro Health Department investigates reports of failing septic sewer systems and coordinates with property owners to abate any confirmed failures. In FY23, there were 30 failing septic systems with sewage on the ground that were abated/repaired due to the Health Department's coordination efforts. A listing of failing septic system investigations can be found in Table 7H.4.

Of those illicit discharges/illegal connections that have been discovered or reported, how many have been eliminated?

All illicit connections found during the reporting period were rectified swiftly and eliminated.

J. Do you have the authority to recover cost for addressing illicit discharges? X Yes D No

We have appropriate language in our Code but have never pursued the option.

#### 8. Stormwater Management for Municipal Operations

A. Have Stormwater pollution prevention plans (or an equivalent plan) been developed for Municipal operations:

NPDES developed a comprehensive Stormwater Management Plan (SWMP) in 2012, which was submitted in a previous annual report. The SWMP included site-specific Runoff Management Plans (RMPs) for key municipal Operations and Maintenance (O&M) facilities, which are plans equivalent to SWPPPs. Since the time the original SWMP and associated RMPs were developed, NPDES has developed additional RMPs for newly identified O&M facilities. Below is a list of current Metro operated O&M sites in which a SWPPP or RMP has been developed:

- MWS Stormwater Maintenance Facility (County Hospital Road)
- Metro Transit Authority (Nestor Street) Bus Maintenance Shop
- Metro Nashville Public Schools Bus Maintenance Shop
- Shelby Park Golf Course Maintenance Shop
- Ted Rhodes Golf Course Maintenance Shop
- Two Rivers Golf Course Maintenance Shop
- Harpeth Hills Golf Course Maintenance Shop
- Percy Warner Golf Course Maintenance Shop
- McCabe Golf Course Maintenance Shop
- Cedar Hill Park Maintenance Shop
- Warner Park Golf Course
- NDOT Maintenance Facility (5<sup>th</sup> Street)
- NDOT West Maintenance Facility (Charlotte Avenue)

FY23 Annual Report (Page 41)

In FY23, NPDES continued to perform random audit inspections on some of the RMP facilities. Minor exposure issues were note at some of the facilities, and NPDES coordinated with each of the site managers to ensure any necessary corrective actions were completed. Also, in FY23, NPDES updated each RMP to account for site/personnel changes since the original plans were developed.

| All municipal parks, ball fields and other recreational facilities  | X Yes 🛛 No |
|---|------------|
| RMPs were developed for O&M facilities such as golf course and park maintenance facilities. RMPs were not developed for every ball field location.  |            |
| All municipal turf grass/landscape management activities (See Note Above)   | X Yes 🗌 No |
|   |            |
| All municipal vehicle fueling, operation and maintenance activities.  | X Yes 🛛 No |
| As per the MS4 Permit, RMPs were created for Municipal O&M facilities, some of which include fueling stations. Some fueling sites are stand-alone with no other maintenance operations present, and RMPs were not necessary (although spill kits are at those locations).   |            |
| All municipal maintenance yards. All O&M facilities located within the MS4.   | X Yes 🛛 No |
| All municipal waste handling and disposal areas   | X Yes 🛛 No |
| SWPPPs were created for the Central Wastewater Treatment Plant and the Dry Creek<br>Wastewater Treatment Plant as they retained a Tennessee Multi-Sector Permit for<br>Industrial Stormwater runoff. In previous permit years, MWS applied for and received<br>non-exposure certification for the Central Wastewater Treatment Plant, due to some<br>changing processes that have occurred over the years. As it currently stands, Dry Creek<br>is the only wastewater treatment plant that is currently required to have TMSP coverage.<br>Metro Nashville does not operate any large waste transfer facilities or transfer stations,<br>as it contracts those services out to private companies. Metro does operate some<br>recycling/waste collection facilities where residents can bring their waste to put in large<br>compactor dumpsters, and NPDES has worked with Waste Services in the previous<br>years to correct runoff issues. |            |
| B. Are Stormwater inspections conducted at these facilities?  | X Yes 🛛 No |
| Each O&M facility where the RMPs were implemented requires on-site personnel to perform monthly grounds inspections. In FY23, NPDES personnel performed audit inspections of all the O&M facilities.  |            |
| If Yes, at what frequency are inspections conducted? See above answer   |            |
| C. Have standard operating procedures or BMPs been developed for all MS4 field activities? (e.g., road repairs, catch basin cleaning, landscape management, etc.)   | X Yes 🛛 No |
| SOPs have been developed for most of the major O&M field activities. MWS posted all of the RMPs, individual water quality SOPs, and a general MS4 educational video to an internal Metro intranet/SharePoint web page for each O&M Department to train their own field staff.   |            |
| D. Do you have a prioritization system for storm sewer system and permanent BMP inspections?  | X Yes 🛛 No |
| In the first year of this permit cycle, NPDES submitted a BMP Maintenance Verification<br>Plan to TDEC that outlined a multipronged strategy to ensure permanent Stormwater<br>Control Measures (SCMs) are being properly maintained. The strategy varies according<br>to which set of Metro's regulations the SCMs were constructed under. The plan includes<br>some inspections by NPDES personnel as well as reguiring owner/operators to perform  |            |

their own inspections/maintenance annually. Since the original SCM maintenance verification plan was submitted to TDEC, NPDES has re-evaluated this process and has decided to dedicate a greater number of resources to ensuring the proper maintenance of these structures. NPDES found that there was very low participation in the owner self-inspection/reporting requirements for newly installed SCMs. In addition, NPDES discovered that some of the inspection and maintenance reports that were submitted were not accurate and lacking in content.

During previous permit years, NPDES expanded resources dedicated to SCM inspection and maintenance oversight. In FY23, NPDES maintained a total staff level dedicated to SCM inspection and maintenance oversight of 5 staff members (1 manager, 4 inspectors and 1 administrative support staff). Current organization of the SCM inspection and maintenance program is further explained in Section 1.3.1 of this document.

E. On average, how frequently are catch basins and other inline treatment systems inspected?

Varies depending on numbers of complaints or other maintenance tasks.

F. On average, how frequently are catch basins and other inline treatment systems cleaned out/maintained?

Frequency of cleanings depends on conditions. The Stormwater Maintenance Section has developed a rain route list of common stormwater infrastructure sites that clog with debris, leaves, gravel, and sediment on a frequent basis. Maintenance crews visit and clean out these sites and perform maintenance prior to many large rain events. Depicted within Table 8F.1 is a summary of some of the major routine maintenance activities performed on MS4 Stormwater infrastructure during FY23. It is estimated that approximately 248,976 cubic yards of material was removed from the MS4 ditches and culverts, approximately 192,960 pounds of material was removed from 21,440 inlets, and approximately 284,855 square feet of erosion control matting was deployed during the FY23 reporting period. In addition to performing routine maintenance and cleaning of stormwater infrastructure, the Nashville Department of Transportation (NDOT) also operates a preventative maintenance program by aggressively sweeping public "curb and gutter" streets. NDOT prioritizes certain streets for sweeping activities based on the accumulation of material on the street. Refer to Table 8F.2 for street sweeping collection numbers in FY23. Please note that, while MWS has operated the street sweeping program for the previous ten years, the program was moved back to NDOT in FY23.

In addition to the routine maintenance activities such as inlet and pipe cleaning, MWS Stormwater also performs various large projects to correct neighborhood flooding issues. In previous reporting periods, NPDES coordinated with the MWS Stormwater Remedial Maintenance group to complete a water quality evaluation form for each large flood control project. As a result, engineers are being asked to consider use of green infrastructure or other low impact design techniques. Based on the water quality evaluation sheets submitted, NPDES was able to estimate that the large flood control projects designed during FY22 would provide the following benefits to water quality.

- Redefining and stabilization of approximately 4,005 linear feet of open storm channel, and
- Removal of approximately 148 linear feet of concrete-lined ditches.

G. Have all applicable municipal employees received training, as identified in each of the following permit sections:

#### Illicit discharge detection and elimination

X Yes □ No

If Yes, identify the number of municipal employees trained.

Throughout the majority of FY23, the Permit Group section within NPDES had 6 - 7 people that were primarily dedicated to investigating and enforcing on illicit discharge issues. Training includes internal training from senior staff and the National Stormwater Center Certified Stormwater Inspector training program. In addition to the primary on-call personnel, there were 13 additional staff members within the FY23 Annual Report (Page 43)

NPDES office that could respond to complaints of illicit discharges. Note: NPDES has also worked with various MWS O&M sections to properly identify and report illicit discharges. Also, please note that staff levels can fluctuate each year due to staff attrition.

#### Construction site stormwater runoff control

X Yes 🛛 No

If Yes, identify the number of municipal employees trained:

At the time this report was completed, there were 20 NPDES staff members that had adequate training (TDEC Level 1 EPSC Workshop) to respond to and inspect Stormwater runoff from construction activities. Eight of the employees are dedicated fulltime to inspecting development sites under construction. Note that staff levels can fluctuate each year based on staff attrition.

#### Permanent stormwater management in new development and redevelopment

X Yes 🗆 No

If Yes, identify the number of municipal employees trained

During FY23, there was an average of 8 engineers employed within the MWS Development Services Section that perform some form of review and approval of the design of permanent stormwater management controls for grading permits. The current internal policy for the MWS Development Services is to require all review engineers to take the TDEC Level II Design Principles for Erosion Prevention and Sediment Control for Construction Sites at least once. In addition to the TDEC Level II training, all inspectors within the NPDES Section that perform inspections on SCMs go through the UT Water Research Center Stormwater Control Measures Inspection and Maintenance training and certification program.

#### Pollution prevention/good housekeeping for municipal operations

X Yes 🗆 No

If Yes, identify the number of municipal employees trained:

In a previous permit year of FY20, NPDES coordinated with all Metro Departments to remind them of stormwater issues that may occur from normal maintenance activities. NPDES hosted a virtual training workshop with all major Metro Departments in which 39 separate staff/managers attended. Also, during FY23, NPDES performed audit inspections of the O&M sites with Runoff Management Plans for municipal maintenance facilities and updated all the RMPs. This process involved coordination with on-site personnel at the facility. In FY23, NPDES continued the new process of inspecting all Metro-owned SCMs for maintenance compliance. Each department was sent a report on maintenance conditions of their department's SCMs.

#### 9. **Permanent Stormwater Controls**

Do you have an ordinance or other mechanism to require: Α.

Site plan reviews of all new and re-development projects? X Yes 🗆 No

Maintenance of Stormwater management controls?

Retrofitting of existing BMPs with green infrastructure BMPs?

MWS Stormwater compiled a new volume to the Stormwater Management Manual (SWMM). Volume 5 (also referred to as the LID Manual) provides specifications for development or redevelopment sites to follow in installing "green" stormwater control measures. The requirements with this manual became mandatory in February 2016 for new development or significant redevelopment. Please note that some of the specifications with Volume 5 were updated in the latest updates to the overall SWMM. which went into effect in November 2021.

В What is the threshold for new/redevelopment Stormwater plan review? (e.g., all projects, projects disturbing greater than one acre, etc.)

Metro actually has more stringent requirements for development than TDEC's Construction General Permit. All development of redevelopment sites grading more than 10,000 square feet must obtain a Metro grading permit. In order to obtain a grading permit, engineered plans must be submitted to the Stormwater Development Review Section for review and approval per Metro's stormwater regulations. All developments increasing the impervious footprint are required to install permanent stormwater treatment measures for water quality and quantity per Metro SWMM criteria.

Have you implemented and enforced performance standards for permanent C. X Yes 🗆 No Stormwater controls?

D. Do these performance standards go beyond the requirements found in paragraph and require that pre-development hydrology be met for:

| Flow volumes (New LID Manual deals with reductions in site runoff volumes) | X Yes 🛛 No |
|--|------------|
| Peak discharge rates   | X Yes 🛛 No |
| Discharge frequency  | 🗌 Yes X No |
| Flow duration  | 🗌 Yes X No |
|  |            |

E. Please provide the URL/reference where all permanent Stormwater management standards can be found.

https://www.nashville.gov/Water-Services/Developers/Stormwater-Review/Stormwater-Management-Manual.aspx

F. How many development and redevelopment project plans were reviewed for this reporting period?

According to gueries of Metro permit tracking database Cityworks, there were 1,121 plans submitted to the MWS Development Review Section during FY23. This number includes initial grading permit plans, resubmitted plans, as-built final submittals, etc. Refer to attached Table 9F.1 for the total number of plans reviewed by Stormwater Development Review staff in FY23.

G. How many development and redevelopment project plans were approved?

According to queries of Metro permit tracking database Cityworks, there were 1,109 plans approved during FY23. This number includes initial grading permit submittals, final as-built signoffs, etc. Refer to Table 9F.1 for a complete listing. A better reflection of actual new development projects approved for construction would be the number of grading permits issued. In FY23, there were 255 grading permits issued.

A LOSS .....

X Yes 🗆 No

X Yes 🗆 No

H. How many permanent Stormwater management practices/facilities were inspected?

There were an estimated 2,109 SCM structures inspected/reinspected by NPDES staff during FY23. This is an estimate based on the number of closed grading permit properties inspected as we track our inspections within the database based on site grading permit. This number of inspections also includes re-inspections of grading permit properties to verify that the necessary maintenance was performed after initial coordination with the site. Most properties have multiple SCMs, therefore, when a property is inspected or re-inspected, several SCM structures often get inspected.

How many were found to have inadequate maintenance?

Of the 2,109 SCM structures inspected by NPDES in FY23, inspectors issued 596 notices to properties that were found to have issues requiring moderate to major maintenance needs. These notices include verbal notices in person or over the phone, formal letters, and/or emails.

J. Of those, how many were notified and remedied within 30 days? (If window is different than 30 days, please specify)

While NPDES has numerous informal conversations with SCM owners about the maintenance status of their SCM(s), performing the necessary maintenance on SCM takes time and not all of the SCMs in need of maintenance were remedied within 30 days. A rough estimate would be around 50% of them were maintained within 30 days of the notice. NPDES performs follow-up compliance inspections when no response is received after an average of 90 days of the notices sent. There are many nuances involved in identifying responsible parties associated with residential "open space" SCMs. Some of these residential-owned structures can take several months to bring into compliance.

K. How many enforcement actions were taken that address inadequate maintenance?

In FY23, 4 Notices of Noncompliance (NONs) were issued to property owners for SCM maintenance issues, mostly involving sites that have made unauthorized alterations to the structures (i.e. modification of a small bioretention basin into a level, turfed back yard area).

L. Do you use an electronic tool (e.g., GIS, database, spreadsheet) to track post- X Yes D No construction BMPs, inspections and maintenance?

NPDES uses the Cityworks permitting database to track inspections, follow-up notifications, etc. The Cityworks database is a city-wide database that is used by all Metro departments to track permits ranging from plumbing permits to grading permits. The database tracks compliance by the property/parcel that the permit is tied to. MWS Stormwater NPDES also tracks each SCM structure within a GIS database, which is used to coordinate and plan inspections. All documentation notes involving inspection and maintenance records are recorded within the Cityworks database and is associated with the site's original grading permit.

M. Do all municipal departments and/or staff (as relevant) have access to this X Yes D No tracking system? All departments and general public can access the locations of SCMs on the parcel viewer program on Nashville's Planning Department website.

N. Has the MS4 developed a program to allow for incentive standards for X Yes  $\Box$  No redeveloped sites?

O. How many maintenance agreements has the MS4 approved during the reporting period?

A LOSS .....

Approximately 255, which is an assumed number based on the number of grading permits issued during FY23.

#### 10. Industrial and High-Risk Runoff

A. Has the MS4 developed and implemented a program to monitor and control pollutants in runoff from the following types of industrial and high-risk facilities and activities:

| Municipal landfills All municipally operated landfills in Metro were closed years ago.<br>The Metro Water Services Waste Services Division oversees all closed landfills'<br>associated groundwater monitoring. | X Yes 🛛 No |
|---|------------|
| Hazardous waste treatment, storage, and disposal facilities   | X Yes 🛛 No |
| Industries subject to reporting requirements pursuant to SARA Title III section 313   | X Yes 🛛 No |
| Industrial facilities that the MS4 determines are contributing a substantial loading of pollutants to the municipal separate storm sewer system   | X Yes 🛛 No |

B. Has the MS4 maintained a database of industrial and high-risk facilities and activities in the City which includes the following types of industries:

• municipal landfills;

activities at least yearly?

- hazardous waste treatment, storage, and disposal facilities;
- industries subject to reporting requirements pursuant to SARA Title III, Section 313; and
- industrial and commercial facilities that the permittee determines are contributing a substantial loading of pollutants to the municipal separate storm sewer system.

During the first permit year of this permit cycle, NPDES built a robust industrial inspection database that comprises the above categories of industrial properties. In addition to the above category of industrial sites (Metro is required to inspect), NPDES has also included within the database all of the industrial facilities with active Tennessee Multi-Sector Permits (TMSPs) for industrial Stormwater runoff, all facilities with active Ready Mix Concrete Permits (RMCPs), and all facilities with active individual NPDES permits to discharge process water. The database is a Microsoft Access database that is interactive with GIS. Please note that most TMSP or RMCP sites do not qualify as industrial facilities subject to SARA Title III, Section 313 reporting requirements and are not required to be inspected by Metro per the current MS4 permit.

| Those listed in 10 (A) above   | X Yes 🛛 No  |
|--|-------------|
| Facilities covered by individual NPDES permits   | X Yes 🛛 No  |
| Facilities covered under the TMSP  | X Yes 🛛 No  |
| Facilities regulated by the pretreatment program;<br>The MWS Pre-treatment Program inventories all sites with industrial user waste water<br>discharge permits and would provide them to NPDES upon request. The Pre-<br>treatment Program notifies NPDES when they become aware of stormwater issues<br>on these sites. | X Yes  □ No |
| C. Has the MS4 updated the database of industrial and high risk facilities and   | X Yes 🗆 No  |

FY23 Annual Report (Page 47)

If yes, provide a listing of any additionally identified industrial and high-risk facilities and activities which discharge stormwater into the MS4:

Facility/Activity

Refer to the attached Table 10.C.1 for a listing of all the industrial facilities NPDES has inventoried into the database. Metro also inventoried other industrial facilities such as TMSP and RMCP facilities, which are not required to be inventoried. NPDES routinely adds facilities to the database based on reviews of the TDEC permitting database. In FY23, NPDES also downloaded a list of sites that submitted No Exposure Certifications to TDEC and began a process of performing cursory field inspections to verify whether or not the facilities had exposed industrial processes/products.

D. Has the MS4 developed and implemented procedures, including an inspector manual and checklist, for routine inspections of industrial and high-risk facilities and activities?

NPDES has created a Standard Operating Procedure (SOP) for performing inspections of industrial facilities. NPDES has also performed numerous coinspections with TDEC Nashville Field Office staff to ensure the industrial inspection process reviews site controls and paperwork similarly to TDEC inspection staff.

X Yes 🗆 No

E. Is the MS4 performing these inspections at such a rate that all required industries will be inspected at least once every three years?

As per the MS4 permit, NPDES is required to inspect all SARA Title III, Section 313 industrial facilities once every 3 years. NPDES completed all of the inspections of facilities designated as having the SARA Title III, Section 313 and Treatment, Storage and Disposal (TSD) facilities by the end of the permit term (January 31, 2017). Following completion of these inspections, NPDES sent a letter to TDEC that addressed the planned modifications to inspections of industrial facilities during the transition/"administrative extension" period before the new permit is reissued. A copy of this letter can be found in Attachment B of this document. The new inspection focus during the transition/"administrative extension" period before that typically have the most exposed materials that can pose a risk to stormwater runoff. TDEC approved the new approach and, in FY23, NPDES vastly increased the number of inspections on facilities that typically have more pollutant exposure issues, which has resulted in an overall reduction of exposed industrial product draining to the MS4.

X Yes 🛛 No

F. Provide a listing of inspections performed during this reporting year: During FY23, NPDES performed 101 formal industrial inspections, some of which include re-inspections. Refer to Table 10.F.1 for a list of Industrial Facilities that were inspected during FY23.

#### 11. Enforcement

A. Identify which of the following types of enforcement actions you used during the reporting period, indicate the number of actions, the minimum measure (e.g., construction, illicit discharge, permanent stormwater control) or note those for which you do not have authority: *Please note that Stop Work Orders are included as part of the same Notice of Violation for construction sites.* The enforcement data below are for grading permit sites involving the grading of more than 10.000 square feet. MWS Development Services also issues enforcements for Single Family Residential (SFR) developments. In FY23, MWS Development Services issued 36 NOVs that included an assessment of \$12,300 in administrative penalties.

| Action                   | Construction         | Permanent<br>Stormwater<br>Controls          | Illicit Discharge                             | Authority? |
|--------------------------|----------------------|--|---|------------|
| Notice of violation      | <u>47</u>            | <u>0</u>                                     | <u>3</u>                                      | X Yes 🛛 No |
| Administrative Penalties | <u>\$20,098</u>      | <u>\$0</u>                                   | \$ <u>1,150</u>                               | X Yes 🛛 No |
| Stop Work Orders         | <u>31</u>            | <u>#</u>                                     | <u>#</u>                                      | X Yes 🛛 No |
| Civil penalties          | <u>#</u>             | #  | <u>#</u>                                      | 🗆 Yes X No |
| Criminal actions         | <u>#</u>             | <u>#</u>                                     | <u>#</u>                                      | 🗌 Yes X No |
| Administrative orders    | <u>#</u>             | <u>#</u>                                     | #   | X Yes 🛯 No |
| Other:                   |                      | <u>4 Notices of Non</u><br><u>Compliance</u> | <u>5 Notices off Non</u><br><u>Compliance</u> | X Yes 🛛 No |
| B. Do you use an elec    | tronic tool (e.g., G | SIS, data base, spread                       | dsheet) to track the                          |            |

B. Do you use an electronic tool (e.g., GIS, data base, spreadsheet) to track the X Yes □ No locations, inspection results, and enforcement actions in your jurisdiction?

C. What are the 3 most common types of violations documented during this reporting period?

Failure to maintain erosion prevention and sediment control measures, illicit discharges from construction and non-construction sites, and grading without applying for or receiving a Metro Grading Permit.

#### 12. Program Resources

A. What was your annual expenditure to implement the requirements of your MS4 NPDES permit and SWMP this past fiscal year?

In FY23, NPDES, which oversees various MS4 compliance activities, operated under a budget of \$4,463,100 (including the separate budget for the Urban Forestry Program). NPDES also operated the additional capital budget of \$300,000 for the Watershed Improvement Fund. The overall MWS Stormwater Division's budget, which includes NPDES, Development Services Review engineers, Stormwater Planning and Stormwater Maintenance, was \$30,895,400. Please note that various other Metro Departments, while not included in this budget analysis, perform activities that contribute to MS4 permit compliance.

B. What is next fiscal year budget for implementing the requirements of your MS4 NPDES permit and SWMP?

The FY24 budget includes \$4,796,600 dedicated to the Stormwater NPDES Section (with a \$425,000 budget for the Watershed Improvement Fund. The overall Stormwater Department is operating under a budget of \$33,188,600.

C. Do you have an independent financing mechanism for your Stormwater X Yes I No program?

D. If so, what is it/are they (e.g., Stormwater fees), and what is the annual revenue derived from this mechanism?

Source: Stormwater User Fee; Estimated Amount \$36,240,000 (estimated for FY24)

Activity/Task/Responsibility

E. How many full-time employees does your municipality devote to the Stormwater program (specifically for implementing the Stormwater program vs. municipal employees with other primary responsibilities that dovetail with Stormwater issues)?

The anticipated FY23 budgeted Stormwater staff includes 108 employees with 23 current vacancies.

F. Do you share program implementation responsibilities with any other entities?

Entity

Your Oversight/Accountability Mechanism

#### 13. Evaluating/Measuring Progress

A. What indicators do you use to evaluate the overall effectiveness of your Stormwater Management Program, how long have you been tracking them, and at what frequency? Note that these are not measurable goals for individual BMPs or tasks, but large-scale or long-term metrics for the overall program, such as in-stream macroinvertebrate community indices, measures of effective impervious cover in the watershed, indicators of in-stream hydrologic stability, etc.?

For over 14 years, the NPDES Watershed Group has been performing detailed sampling for TMDL streams throughout Metro, some of which is proactive and not required per the MS4 permit. The data collection has proven beneficial in identifying segments of streams where pollutants are elevated or within water quality standard criteria. Please refer to the attached Table 13A.1 (TMDL Sampling Data) for the complete quarterly sampling results for the FY23 reporting period. Please note that previous Annual Reports contained additional data for monitoring conducted during those reporting periods. NPDES performs various monitoring activities as prescribed by the MS4 Permit. The MS4 permit-required sampling (i.e., Wet Weather Monitoring, Ambient Sampling, and Benthic Sampling) was changed in the current iteration of the permit (See Attachment B). The NPDES Watershed Group routinely analyzes the sampling data to determine if negative trends are observed within any of the sampled tributaries. When negative trends are found. NPDES performs source tracking investigations. Whenever identifiable sources are not found. NPDES considers initiating targeted public education campaigns in those watersheds to address other potential impacts, such as pet waste or overfertilization. The MS4 Permit-prescribed Ambient Sampling and Benthic Sampling data is summarized in Table 13A.3 and Table 13A.4 respectively. NPDES's Watershed Group collected approximately 270 water quality samples and performed visual stream assessments on approximately 135,562 linear feet of 303(d)-listed streams within FY23.

Over the years, NPDES has also looked at other non-analytical data to evaluate the program's effectiveness. Refer to Table 13A.2 (SWMP Quantifiable Statistics). Many of the functions such as IDDE efforts, public education, etc. that NPDES performs do not easily translate into quantifiable loading reduction numbers. As an attempt to quantify pollutant loading reduction numbers from various sources, NPDES hired a contractor in previous years to develop a database that will track loading reductions of structural and non-structural controls implemented as part of Metro's SWMP. This database is known as the Watershed Improvement Evaluation System (WIES) and is cloud/web-based, which will allow NPDES to track pollutant reduction efforts of current SWMP elements as well as potential benefits through program modifications. Specific tables and graphs of FY23 estimated pollutant loading runoff numbers and pollutant loading reduction efforts by SWMP structural and non-structural controls are presented in Attachment C.

In addition to pursuing development of a database that can actively track and analyze pollution reduction efforts of the SWMP, NPDES also conducted an internal review of the SCM Inspection and Maintenance Oversight Program once the 1<sup>st</sup> cycle of county-wide inspections was completed. NPDES put together a list of many of the lessons learned in the first cycle and has already started changing some processes to make the next cycle of inspections and coordination with property owners to be more effective and efficient.

B. Provide a summary of data (e.g., water quality information, performance data, modeling) collected in order to evaluate the performance of permanent Stormwater controls installed throughout the system. This evaluation may include a comparison of current and past permanent Stormwater control practices.

Please refer to the answer above and Section 3 of this document for a summary of various water quality data collected by NPDES during this reporting period. As mentioned above, a more comprehensive evaluation of pollutant reduction estimates of major SWMP program elements is included in Attachment C.

C. What environmental quality trends have you documented over the duration of your Stormwater program? (If you have reports or summaries, you can either attach them electronically, or provide the URL to where they may be found on the Web.) As mentioned above, NPDES has actually found fewer illicit discharges to the MS4 over the years. This reduction in actual confirmed illicit discharges to the MS4 can be contributed to a robust IDDE program and increased public awareness. In addition, there have been fewer notices of violations issued for construction site infractions. Middle Tennessee contractors have become acutely aware of Metro's construction site requirements and enforcement program and, therefore, have increasingly complied with our regulations. It has also been noted that many of the concerns from citizens usually involve relatively minor issues as compared to concerns reported in the beginning of the NPDES program many years ago.

#### 14. Stormwater Management Program Update

A. Describe any changes to the MS4 program, per Section 3.5 of the permit, during the reporting period including but not limited to:

Changes adding (but not subtracting or replacing) components, controls, or other requirements.

At the end of year 5 of the current MS4 permit, NPDES submitted a request to change the dry weather field screening, industrial monitoring, and wet weather sampling elements for the transition/"administrative extension" period between permit expiration and reissuance. (Refer to Attachment B) NPDES also requested these items to be adjusted in the reissued permit as well. NPDES analyzed work hours per each task verses the benefit to the program in hopes of developing the most efficient and effective program possible. A summary of the proposed changes can be found in Attachment B. NPDES made some adjustments to the IDDE enforcement policies and IDDE SWMP narrative from recommendations of the TDEC CEI conducted in the previous permit year. Those amendments to the SWMP are included in Attachment B of this document. Overall, NPDES has been pleased with the increased efficiency and effectiveness of the adjusted SWMP programs. In FY23, NPDES updated the Public Information/Education (PIE) plan. The updated copy can be found in Section 4 of this document.

Changes to replace an ineffective or unfeasible BMP.

Refer to above answer

Information (e.g., additional acreage, outfalls, BMPs) on program area expansion based on annexation or newly urbanized areas.

Just prior to the issuance of this cycle of the MS4 permit, the former satellite city of Lakewood voted to dissolve and become part of Metro Nashville and Davidson County. Upon that transition becoming official, NPDES field screened the commercial areas for potential illicit discharge connections, inventoried and added all of the Stormwater infrastructure into the GIS database, and began performing stormwater maintenance services for the newly annexed area.

Changes to the program as required by the division.

Please refer to the explained SWMP narrative changes and enforcement policy changes that resulted from the TDEC CEI.

#### 15. Certification

This report must be signed by a ranking elected official or by a duly authorized representative of that person. See signatory requirements in subpart 5.7 of the permit.

"I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."

| Printed Name and Title | Signature | Date |
|------------------------|-----------|------|
|                        |           |      |
|                        |           |      |

| Total FY14 | 249                         | 318                       | 159                  |
| Total FY15 | 292                         | 276                       | 259                  |
| Total FY16 | 268                         | 254                       | 217                  |
| Total FY17 | 297                         | 262                       | 203                  |
| Total FY18 | 331                         | 311                       | 264                  |
| Total FY19 | 345                         | 327                       | 250                  |
| Total FY20 | 312                         | 283                       | 285                  |
| Total FY21 | 351                         | 308                       | 237                  |
| Total FY22 | 291                         | 290                       | 206                  |
| Total FY23 | 258                         | 255                       | 214                  |
| Total      | 5,352                       | 4,924                     | 4,136                |

Table 6B.1 – Grading Permit Projects Initiated/Completed within FY23

A Man. A

| New Infill Permits Issued  | 1,048    |
|--|----------|
| Follow up site visits for Infill Developments  | 6,372    |
| NOVs Issued to Single Family Residential Development                                       | 68       |
| NOV Administrative Penalties issued for Single Family Residential Stormwater<br>Violations | \$23,150 |

#### Table 6C.1 – Small Construction Site Oversight in FY23

Note: Midway through FY15, Metro passed new legislation establishing the new Infill Development Permits. Projects that create 800 to 15,000 square feet of additional net impervious area though new development, redevelopment, or rehabilitation of a residential structure in existing neighborhoods are required to obtain Infill Development Permits. As such, MWS Stormwater staff provides oversight to require stormwater controls to be installed to treat stormwater runoff during and after construction, which is above and beyond MS4 permit requirements.

Table 7H.5 – MWS Estimated/Reported Sewage Overflows in FY23

\*Note: Most of the dry-weather overflows involve a small level of clean-up performed by Department personnel. Most of the overflows that reach creeks occur during wet weather conditions.

| Item   | Total       |
|--|-------------|
| Ditch Excavated/Repaired (Linear Feet)             | 131,384     |
| Debris Removed - Ditch Exc. & Repair (cubic yards) | 6,368       |
| Debris Removed - General (cubic yards)             | 221,129     |
| Inlets Cleaned                                     | 21,440      |
| Inlets Repaired                                    | 20          |
| Material Removed (lbs.)                            | 192,960     |
| Walls/Headwalls Built                              | 358         |
| Walls/Headwalls Repaired                           | 81          |
| Cross Drains Cleaned                               | 270         |
| Cross Drains Replaced                              | 3           |
| Matting Used (square feet)                         | 284,855     |
| Driveway Pipes Cleaned                             | 1,353       |
| Driveway Pipes Replaced                            | 179         |
| Preventative Maintenance Hours                     | 4,178       |
| Rain Routes Hours                                  | 4,415       |
| Note: (Some assumptions are used in the quantity   | (ostimatos) |

Table 8F.1 - MWS Stormwater Maintenance Work Order Numbers for FY23

Note: (Some assumptions are used in the quantity estimates) \*All statistics are reported based on the actual finish date of the task(s), not the work order(s).

\*All cubic yardage is computed from the loads reported for each truck size. \*Debris Removed' under Ditch Exc. & Repair is the total of all cubic yardage reported under work orders that had a \*Redefine Ditch' task. 'Debris Removed' under Debris Removal (misc.) is the total of cubic yardage reported under all other work orders not counted in the first Debris Removal figure. \*Inlets Repaired number includes those that were replaced with "bike-friendly"

grates.

# 4.0 Supporting Program Data

The following is supplemental data that supports Metro Nashville's MS4 Permit Compliance:

| Various Stats Tracked for the Current Water Quality Improvement Project Contract with the Cumberla | nd  |
|--|-----|
| River Compact as of the Date the Annual Report was Compiled  | 94  |
| Example Meeting Minutes from the Stormwater Management Committee during FY23                       | 95  |
| MWS Classroom/Youth-Based Public Education Program Activities during FY23                          | 100 |
| Locations of MWS - Facilitated Tennessee Smart Yards in Davidson County during FY23                | 103 |
| Summary of MWS-Facilitated Tennessee Smart Yard Actions Taken During FY23                          | 105 |
| Analysis of the Smart Yard Actions Poll Utilized During FY23                                       | 106 |
| NPDES Public Education Activities during FY23  | 109 |
| Metro Water Services Waste Services Division - Material Management Report (FY23)                   | 115 |
| Metro Nashville Department of Transportation Hazardous Spills Responses to Large Spills on Metro   |     |
| Roadways During FY23   | 116 |
| FY23-Updated PIE Plan  |     |

Nashville Metro Water Services

"I want to work here when I'm older, if it's still here," remarked one of our homeschool visitors at the K.R. Harrington drinking water treatment plant. We will be here, and we will be hiring!

Learn how you can schedule a group tour at www. nashville.gov/departments/water/communityeducation/school-programs

Nashville Metro Water Services Oct 3, 2022 · S

Did you see us this weekend? MWS was out and about at Cumberland Park, talking Stormwater at the Dragon Boat Festival! Thank you **Cumberland River Compact** for having us, we are already looking forward to next year!

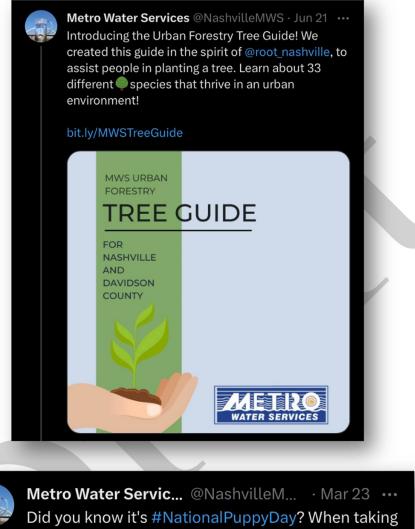

p.s. if you weren't able to stop by, make sure to check out our website for tips! https://www.nashville. gov/departments/water/stormwater/pollutionprevention/community-guidance

#### III. STORMWATER MANAGEMENT COMMITTEE AGENDA

Comments were solicited from the Planning, Metro Parks, and Codes Departments for the following Agenda items.

 1. 202100017 Century Farms Development (Parcel 12)
 APN 17400026400

 0 Cane Ridge Pkwy
 17400026500

Inspector: (Shawn Herman)

#### **APPLICANT'S REQUEST:**

1. Disturbance of wetland buffers.

2. Wetland removal.

A 10

APPELLANT: Century Farms, LLC REPRESENTATIVE: Michael Pigg (Barge Design Solutions) COMMENTS: SW STAFF: No comment provided. CODES: No comment provided. PLANNING: No comment provided. GREENWAYS: No comment provided.

Ms. Carrie Stokes recused herself from the vote.

The case was previously deferred at the December 02, 2021 meeting.

Mr. Michael Pigg (Barge Design Solutions) and Ms. Sara Samoray (BDY Environmental) gave an updated presentation about the proposal and the mitigation associated with it.

Mr. Dodd Galbreath opened the public hearing. No parties were present to speak in favor or in opposition to the request. No emails or letters were sent for this case. Mr. Dodd Galbreath closed the public hearing.

Mr. Dodd Galbreath began the committee discussion by talking about the wetland and if it was manmade or naturally made. Ms. Sara Samoray stated that it was previously a farm pond (man-made).

Mr. Dodd Galbreath asked about Federal and State permitting. Ms. Sara Samoray stated that the TDEC ARAP permit had been received, but the USACE Section 404 permit was still in process of review and public comment.

Dr. Janey Camp asked about the existing wetland buffer for the wetland being disturbed. Ms. Sara Samoray stated that the buffer was previously protected, and is proposed to be enhanced with this project.

Mr. Dodd Galbreath discussed the proposed mitigation with MWS staff and Ms. Sara Samoray.

FY23 Annual Report (Page 96)

# Example Meeting Minutes from the Stormwater Management Committee during FY23 (Continued)

Mr. Jay Fulmer discussed signage requirements for delieating the wetland buffers with the applicant and MWS staff.

After discussion during the Executive Session of the Committee on February 3, 2022 and review of the information Mr. Jay Fulmer presented a motion to conditionally approve as presented. Mr. Trey Lewis seconded the motion. Mr. Dodd Galbreath, Mr. Trey Lewis, Dr. Janey Camp, and Mr. Jay Fulmer voted in favor of the motion.

**NOW THEREFORE**, it is the decision of the Committee that the request in Variance Request No. 202100017 as set out above and further described in the case record, be and is hereby **GRANTED**."

2. 202100018 721 Brook Hollow Road 721 Brook Hollow Road Inspector: (Kimberly Hayes)

APN 11503009100 CD-23(Thom Druffel)

#### **APPLICANT'S REQUEST:**

1. Floodway buffer disturbance.

2. Continuous mowing and maintenance of the floodway buffer.

APPELLANT: Larence Ritter Properties LLC REPRESENTATIVE: Josh Ritter (Larence Ritter Properties LLC) <u>COMMENTS</u>: <u>SW STAFF</u>: Staff requests an undisturbed buffer adjacent to the stream. <u>CODES</u>: No comment provided. <u>PLANNING</u>: No comment provided. <u>GREENWAYS</u>: No comment provided.

Mr. Josh Ritter (Larence Ritter Homes), Mr. Eric Larence (Larence Ritter Homes), Mr. Alex Hollman (Larence Ritter Homes), and Mr. Matthew Skelton (Civil and Environment Consultants) gave a presentation about the proposal and mitigation.

Mr. Dodd Galbreath opened the public hearing. No parties were present to speak in favor or in opposition to the request. No emails or letters were sent for this case. Mr. Dodd Galbreath closed the public hearing.

Mr. Dodd Galbreath discussed the existing onsite buffer condition with the applicant and MWS staff.

Mr. Dodd Galbreath asked the applicant about alternative plans to eliminate disturbance in the Zone floodway buffer. Mr. Josh Ritter talked about the plans that had been proposed and clarified that no zoning setback variance was applied for through the Board of Zoning Appeals.

Ms. Carrie Stokes asked for clarification on amount of disturbance within the buffer area. Mr. Josh Ritter clarified the square footage of disturbance for the existing and proposed home.

Mr. Dodd Galbreath discussed the hydrologic determination performed to identify streams and wet weather conveyances onsite with Mr. Josh Ritter.

FY23 Annual Report (Page 97)

# Example Meeting Minutes from the Stormwater Management Committee during FY23 (Continued)

Mr. Dodd Galbreath and Ms. Rebecca Dohn (MWS NPDES) asked Mr. Josh Ritter about proposing a no-mow area closer to the stream.

Dr. Janey Camp asked about requesting plantings at a nearby park or other public area, since full restoration of the buffer might not be possible onsite. Ms. Rebecca Dohn stated that typically sites are required to keep mitigation onsite and provide plantings at the edge of the area that is to become a no-mow area.

After discussion during the Executive Session of the Committee on February 3, 2022 and review of the information Mr. Trey Lewis presented a motion to conditionally approve as presented. Dr. Janey Camp seconded the motion. Mr. Dodd Galbreath, Mr. Trey Lewis, Ms. Carrie Stokes, Dr. Janey Camp, and Mr. Jay Fulmer voted in favor of the motion.

**NOW THEREFORE**, it is the decision of the Committee that the request in Variance Request No. 202100018 as set out above and further described in the case record, be and is hereby **GRANTED**."

#### **3. 202200001 River North Landings Lot C** 0 Waterside Drive Inspector: (Denice Johns)

APN 08206009800 CD-05(Sean Parker)

### **APPLICANT'S REQUEST:**

A 10

1. Floodway buffer disturbance for a fire access road.

APPELLANT: NRN Parcel C Owner, LLC REPRESENTATIVE: Kevin Gangaware (CSDG) COMMENTS: SW STAFF: No comment provided. CODES: No comment provided. PLANNING: No comment provided. GREENWAYS: No comment provided

Mr. Kevin Gangaware (CSDG) gave a presentation about the proposal and mitigation.

Mr. Dodd Galbreath opened the public hearing. No parties were present to speak in favor or in opposition to the request. No emails or letters were sent for this case. Mr. Dodd Galbreath closed the public hearing.

Mr. Dodd Galbreath and Mr. Kevin Gangaware discussed the proposed future pedestrian bridge being built at a later time.

Mr. Dodd Galbreath and Mr. Michael Hunt (MWS NPDES) discussed the usage of pervious pavement in the floodplain.

The committee members discussed Fire Marshal requirements and use of signage to delineate the fire access road with Mr. Gangaware.

FY23 Annual Report (Page 98)

# Example Meeting Minutes from the Stormwater Management Committee during FY23 (Continued)

The committee members discussed the proposed retaining wall and proposed grading on the neighboring property.

After discussion during the Executive Session of the Committee on February 3, 2022 and review of the information Mr. Jay Fulmer presented a motion to conditionally approve as presented. Ms. Carrie Stokes seconded the motion. Dr. Janey Camp made an amendment to the motion to add signage requirements. Mr. Trey Lewis seconded the amendment to the motion. Mr. Trey Lewis, Ms. Carrie Stokes, Dr. Janey Camp, Mr. Jay Fulmer, and Mr. Dodd Galbreath voted in favor of the amendment to the motion. Mr. Trey Lewis, and Dr. Janey Camp voted in favor the motion.

**NOW THEREFORE**, it is the decision of the Committee that the request in Variance Request No. 202200001 as set out above and further described in the case record, be and is hereby **GRANTED**."

### V. ITEMS OF BUSINESS

Mr. Jay Fulmer was introduced a new member of the committee.

### VI. ADJOURNMENT

The meeting adjourned at 10:14 a.m.

Metropolitan Stormwater Management Committee Approved: By:

Logan Bowman

FY23 Annual Report (Page 104)

| Total Yard Certifications in Davidson County, July 1, 2022 - June 30, 2023                  | 54      |
|---|---------|
| Actions Taken by Certified Yard Owners  | Reporte |
| Determine your landscape objectives.  | 52      |
| Leave grass clippings on lawn.  | 52      |
| Use landscape waste (tree trimmings/ fallen leaves/ pine needles etc.) on site.             | 51      |
| Protect beneficial insects that control pests and support pollination.                      | 51      |
| Remove or avoid using invasive/exotic plants and incorporate native plants.                 | 50      |
| Assess yard conditions such as light availability/soil characteristics etc.                 | 49      |
| Group plants according to site conditions.  | 48      |
| Incorporate plants that support habitat needs of desirable wildlife.                        | 48      |
| Mow grass high.   | 47      |
| Check for pests regularly.  | 47      |
| Spot treat only affected areas  | 47      |
| Avoiding routine applications of pesticides.  | 47      |
| Preserve existing vegetation (especially trees) during land disturbance activities.         | 46      |
| Use composted grass clippings/ leaves/ pruned plant parts/ kitchen scraps to improve soils. | 46      |
| Protect all soil surfaces with vegetation to minimize erosion by rainfall and runoff.       | 45      |
| Use environmentally-friendly pesticides such as horticultural oils and insecticidal soaps.  | 45      |
| Incorporate salvaged materials into landscaping.  | 43      |
| Use mechanical approach to control pests such as pruning and hand removal.                  | 43      |
| Install bat houses, bird houses, and bird feeders.  | 43      |
| Use organic pine straw/ pine bark/ leaves/ or hardwood mulch.                               | 42      |
| Sketch your yard including long-term goals.   | 41      |
| Practice good housekeeping.   | 41      |
| Locate plants to increase home energy efficiency.   | 34      |
| Provide a wildlife water source.  | 32      |
| Use rain gauge to monitor plant water needs.  | 31      |
| Assess and address soil compaction.   | 29      |
| Maintain a 2–3-inch mulch layer in plant beds and over tree roots.                          | 27      |
| Disconnect downspouts from the stormwater drainage system or from impervious surfaces.      | 26      |
| Maintain soil pH in the recommended value.  | 25      |
| Adjust sprinkler heads to avoid hitting paved surfaces.                                     | 23      |
| Fertilize as recommended by soil test and not in wet weather.                               | 23      |
| Use rain barrels to catch rooftop runoff  | 21      |
| Maintain a mix of native trees, shrubs, grasses, and wildflowers along water's edge.        | 19      |
| Use permeable surfaces for hardscapes.  | 18      |
| Build a rain garden to catch and filter runoff.   | 13      |
| Create a "no mow, no fertilizer, no pesticide" zone along waterways.                        | 13      |

## Summary of MWS-Facilitated Tennessee Smart Yard Actions Taken During FY23

\*

# Analysis of the Smart Yard Actions Poll Utilized During FY23

Using a prompt generator, NPDES developed a detailed prompt and provided the data to ChatGPT to provide an analysis of the level of effort for each Smart Yard Action and a recommendation for increasing the adoption of each action.

### Low Effort Actions:

- 1. Use rain gauge (28% of respondents answering 'I do this'):
  - Level of Effort Explanation: This action is generally considered low effort, involving setting up and periodically checking a rain gauge.
  - Recommendation: Create a short video tutorial or infographic that demonstrates how to install and use a rain gauge effectively. Share this resource through community social media platforms and local gardening clubs to raise awareness and provide practical guidance.
- 2. Good housekeeping (86% of respondents answering 'I do this'):
  - Level of Effort Explanation: Good housekeeping practices, involving routine tasks like cleaning and organizing outdoor spaces, are typically low effort.
  - Recommendation: Organize community workshops or webinars focused on the importance of good housekeeping practices. Share success stories from community members who have benefited from organized outdoor spaces to inspire others.
- 3. 2-3" layer of mulch (75% of respondents answering 'I do this'):
  - Level of Effort Explanation: Applying a 2-3" layer of mulch is a straightforward gardening task that is generally low effort.

FY23 Annual Report (Page 106)

# Analysis of the Smart Yard Actions Poll Utilized During FY23 (Continued)

• Recommendation: Develop a step-by-step guide on mulch application and its benefits. Distribute printed copies at community events and make digital versions available on the community website for easy access.

### Moderate Effort Actions:

- 1. Fertilize as recommended (63% of respondents answering 'I do this'):
  - Level of Effort Explanation: Properly fertilizing a yard according to recommendations can be moderately effortful.
  - Recommendation: Collaborate with local agricultural experts to offer seasonal workshops on fertilization best practices. Provide soil testing resources and guidance to help residents determine their yard's specific fertilizer needs.
- 2. Mechanical approaches to pest management (81% of respondents answering 'I do this'):
  - Level of Effort Explanation: Implementing mechanical approaches to pest management, which may involve setting traps, maintaining barriers, or physically removing pests, can be moderately effortful.
  - Recommendation: Host interactive sessions where community members can learn about various mechanical pest management methods. Encourage participants to share their experiences and insights on what works best in the local context.
- 3. Mow grass high (81% of respondents answering 'I do this'):
  - Level of Effort Explanation: Adjusting the mowing height to a higher setting is moderately effortful.
  - Recommendation: Develop a seasonal lawn care calendar that includes guidance on adjusting mowing heights. Distribute this calendar through local gardening stores and collaborate with lawn care professionals to provide workshops on proper mowing techniques.
- 4. No mow zone along waterways (55% of respondents answering 'I do this'):
  - Level of Effort Explanation: Creating a "no mow zone" along waterways is moderately effortful.
  - Recommendation: Launch a public awareness campaign highlighting the benefits of no mow zones along waterways. Provide resources, such as templates for creating signage, to make it easier for residents to establish and maintain these areas.

### High Effort Actions:

- 1. Remove invasives/plant natives (88% of respondents answering 'I do this'):
  - Level of Effort Explanation: Removing invasive species and planting native plants is a high-effort undertaking.
  - Recommendation: Organize community volunteer events for invasive species removal and native plantings. Promote these events through local environmental organizations and offer educational sessions on identifying invasive species.
- 2. Use landscape waste on site (90% of respondents answering 'I do this'):
  - Level of Effort Explanation: Managing landscape waste on-site is considered high effort.
  - Recommendation: Establish a community composting program with designated composting bins and regular pickups. Provide workshops on proper composting techniques and the benefits of using compost in gardening.

### Analysis of the Smart Yard Actions Poll Utilized During FY23 (Continued)

- 3. Wildlife habitat plants (86% of respondents answering 'I do this'):
  - Level of Effort Explanation: Establishing a wildlife habitat with specific plantings is high effort.
  - Recommendation: Create a community wildlife habitat certification program that recognizes participants' efforts. Organize tours of established wildlife habitats and encourage participants to share their knowledge and experiences with native plantings.

In conclusion, the data indicates that the level of effort for eco-friendly actions varies, but there is a willingness within the community to engage in practices that range from low to high effort, depending on the perceived benefits and ecological impact of the action. Effort, along with awareness and education, plays a significant role in shaping community engagement in sustainable practices.

# FY23-Updated PIE Plan

# Metro Nashville Municipal Separate Storm Sewer System Permit Public Information & Education Plan Created: August 2012

Updated: May 2023 – (New Outreach Strategies)

# 1.0 INTRODUCTION:

With issuance of the third cycle of Metro Nashville's Municipal Separate Storm Sewer System (MS4) permit, there is an increased emphasis on the amount of public education and outreach Metro Water Services (MWS) will be responsible for overseeing. The first major undertaking will involve developing a public information and education (PIE) plan. The PIE plan will outline the stormwater educational strategies, identify targeted educational approaches, and list yearly goals and accomplishments. A majority of MS4 permit items are coordinated and overseen by the MWS Stormwater NPDES Section, however, development and implementation of the PIE plan will be a joint effort between NPDES and MWS Communications Section.

The main goals of stormwater education activities will be to increase public awareness for purposes of eliminating illicit discharges and improper disposals, reducing nonpoint source pollutants through better land management practices (i.e. fertilizer, sediment, oil, etc.), reducing overall runoff quantities through innovative development strategies, and ultimately improving water quality of receiving streams. In the new permit, Stormwater is required to target specific "hot areas", which are defined in the permit as: "an area where land use or activities generate highly contaminated runoff, with concentrations of pollutants in excess of those typically found in stormwater. Examples might include operations producing concrete or asphalt, auto repair shops, auto supply shops, large commercial parking areas and restaurants. " In some of Nashville's subwatersheds, public education will be the primary Best Management Practice (BMP) implemented for improving stormwater runoff quality, therefore, improving receiving water quality. For example, if NPDES staff finds that a stream segment or subwatershed is impacted by a specific pollutant, targeted public education will be distributed to the surrounding community aimed at reducing non-point source runoff from that specific pollutant (i.e. pet waste, fertilizer).

# 1.1 RESPONSIBLE PERSONNEL:

While the entire NPDES Section and MWS Public Relations Section will be contributing to implementing PIE plan objectives, specific personnel within each department have been identified to oversee certain aspects of the plan. Table 1 depicts general PIE plan objectives and responsible personnel.

| Personnel        | PIE Plan Responsibility  | Contact<br>Information |

|                  | needed.  |                        |

# 1.2 PIE PLAN GOALS AND TIMEFRAMES:

Goals for the PIE plan will be broken up into the following three main categories:

<u>Goal 1</u>: Meet and/or exceed MS4 permit requirements.

<u>Goal 2</u>: Increase the fundamental understanding of water pollution for Nashville students, residents, businesses, and municipal employees.

<u>Goal 3</u>: Encourage use of better management practices that result in improved water quality of runoff from MS4 and private facilities within Metro's MS4 jurisdiction.

Measuring the success of each goal will involve different evaluation procedures. Goal 1 will be, perhaps, the easiest objective to measure. While some of the MS4 permit language is vague, there are some identified milestones and deadlines that can be assessed in each MS4 annual report for completeness. Assessing the effectiveness of the PIE plan in accomplishing Goals 2 and 3 will be more difficult and are discussed in greater detail in Section 5 of this document.

# 2.0 Targeted Audience Groups:

In order to accomplish the PIE plan objectives, the first step is to identify targeted audiences for which education delivery methods will be tailored towards. The targeted audience will be determined based on a variety of factors, some of which will include general land use, business/community types, geographical areas, previous complaints, and perceived educational needs.

# 2.1 School Groups/Youth Camps

School children and youth are perhaps one of the most important demographics to target for stormwater education, as they will shape the future of water quality within Metro. MWS will engage school classes in projects and programs that connect students to the social, economic, and environmental impacts of stormwater issues and solutions, and to related careers.

# 2.2 "Hot Areas" within Metro

As discussed in Section 1, the new MS4 permit requires Metro to target "hot areas" as we designate. MWS NPDES will utilize its vast monitoring data, general knowledge from field investigations, and citizen complaints to aid in determining "hot areas". The determined "hot areas" can often be classified into three main categories based on overall land use associated pollutants of concern. Table 2 refers to the typical pollutants expected in runoff from each major urban land use category. For purposes of public education, the three major urban land use categories have been identified to target specific messages: Residential, Commercial, and Industrial. These targeted educational messages will be included in the educational material (i.e. mailouts, brochures, door hangers) developed specifically for each category.

| Major       | Typical          | Typical Source  | Resulting Water Quality  |
|-------------|------------------|---|--|
| Land        | Pollutants       |   | Degradation to Target in   |
| Use         |                  |   | Educational Messages   |
| Residential | 1. Nutrients     | 1. Over-fertilization, Pet Waste, Human   | 1. Increased algal blooms, depleted dissolved  |
|             |                  | Waste and Detergents from failing septic  | oxygen levels from decaying algae.   |
|             |                  | systems.  | 2. Reduced water clarity for aquatic plants,   |
|             | 2. Sediment      | 2. Grading areas without maintained   | smothers aquatic life, transports other  |
|             |                  | controls. Removing stream bank  | pollutants.  |
|             | 3. Pathogens     | vegetation.   | 3. Potentially harmful to human health.  |
|             | 5. I athogens    |   |  |
|             |                  | 3. Failing septic systems, illegal cross-   |  |

# Table 2 – Typical Pollutant Runoff from Major Land Use Categories

# 2.3 Business Type/Community "Hot Areas"

There are certain types of businesses scattered throughout the county in which MWS NPDES have found to have a high potential for polluted runoff. MWS will conduct targeted educational campaigns towards theses respective businesses. Business types that will be recipients of targeted education will include:

- Ready Mix Concrete Plants focus on sediment runoff;
- Asphalt Mixing Plants focus on sediment and oil & grease runoff;
- Recycling Centers focus on sediment, metals, and trash runoff;
- Automotive Salvage Yards focus on sediment and automotive fluid runoff;
- Targe Automotive Repair Shops focus on automotive fluid runoff; and
- Landscaping companies focus on sediment runoff and application of pesticides, herbicides, fertilizers, and fungicides.

# 2.4 High Citizen Complaint Zones

MWS receives numerous complaints about a variety of issues throughout the county. Complaints range from people dumping materials in storm ditches (leaves, limbs, trash, etc.) to people discharging illegal substances to the storm system. Upon analysis of complaints, MWS may choose to target certain areas for localized education. Depending on the magnitude and type of pollutant found in the waterway, MS4, or adjacent areas, NPDES will determine the necessary extent of the public education campaign. For example, if multiple residents on multiple streets are found to be dumping yard waste into a stormwater ditch, the whole community may receive educational material on proper disposal requirements and harmful impacts the waste can contribute to waterways. This type of education will be performed on a case by case basis and may be performed using social media apps such as NextDoor.

# 2.5 Large Civic Educational Events

As prescribed in the MS4 permit, Metro is required to perform stormwater education at a minimum of six large public events per calendar year. MWS Stormwater will satisfy this requirement by participating in large community events that relate to environmental awareness. The following large civic events have been preliminarily identified for Metro to participate with a stormwater education component. Please note that these events may fluctuate year to year, as MWS Stormwater usually participates in more than 6 events a year.

- 1. Nashville Lawn and Garden Show
- 2. Nashville Earth Day Festival
- 3. Urban Runoff 5K and Water Quality Festival
- 4. Tomato Art Fest
- 5. TN STEAM
- 6. Cumberland River Compact's Dragon Boat Festival

# 2.6 Post Construction Treatment Devices (SCM) Owners

Developing sites that meet certain thresholds within the county are required to install permanent stormwater treatment devices, otherwise referred to as Stormwater Control Measures(SCMs), that are usually designed to treat stormwater runoff for water quality and quantity purposes. Once the site is completely developed, the property owner becomes responsible for permanent maintenance of SCMs. Metro will specifically target owners of BMPs to achieve proper maintenance.

# 2.7 Grading Contractors/Development Community

The development community, including land developers and grading contractors, will be the target of specific educational outreach. Education geared toward the development community will be focused on the impacts of sediment runoff during construction and general pollutant runoff from pervious surfaces after construction is completed.

# 2.8 Municipal Maintenance Employees

All Metro departments with field maintenance staff will be a key target audience for distributing stormwater education materials. As prescribed in the MS4 permit, municipal maintenance employees shall be trained on potential stormwater impacts

that could result from maintenance activities. In addition, municipal field staff shall be trained on identifying and reporting occurrences of illicit discharges.

# 2.9 General Metro Residency

Perhaps the most important constituency within Metro to educate for stormwater quality purposes is the general residents within Metro. While there may exist overlap within the above-described target areas, Metro will also implement techniques to try to reach the masses on more general terms. MWS Stormwater's participation in the Tennessee Smart Yard (TNSY) program, for instance, is geared toward trying to promote more water quality practices for Davidson County residents.

# 2.10 Social Media Community

Stormwater focused posts are developed to reach a broad audience on MWS Facebook, Instagram, Twitter, and NextDoor to address both general pollution concerns and promote NPDES's educational opportunities and materials. MWS Stormwater works with the MWS Communications section to ensure posts are effective and easily understood. NextDoor can also be used to target specific neighborhood water quality concerns via posting in a specified geographic location. Promotion of workshops, events where MWS will participate or host, and other presentations is completed using the social media platforms.

# 3.0 Education Techniques for Targeted Audiences:

MWS will utilize a variety of tools to perform stormwater education. Education delivery methods will be designed to achieve maximum distribution to the targeted audiences. For example, educational efforts for the above-described "hot areas" may include mailouts, outbound calling, coordinating with local non-profit watershed groups, and possibly holding community meetings. Table 3 matches the potential educational technique to the specific targeted audiences. As the MS4 public information plan proceeds, new techniques may be utilized for specific targeted audiences and the PIE Plan will be updated accordingly.

| Targeted Audience Group                                   | Public Education/Outreach Technique   |
|---|---|
| School Groups/Youth Camps                                 | <ul> <li>In-person or virtual presentations/demonstrations</li> <li>Distribution of educational materials designed for<br/>youth. (i.e., games, puzzles, tests, etc.)</li> </ul>  |
| General "Hot Areas"                                       | <ul> <li>Mail-outs (area-specific)</li> <li>Social Media (NextDoor used for specific neighborhoods)</li> <li>Outbound calling (area-specific)</li> <li>Soliciting help from local non-profit watershed groups in distributing educational materials</li> <li>Co-host community meetings with local non-profit watershed groups</li> </ul> |
| Community/Business Type "Hot<br>Areas"                    | <ul> <li>Mail-outs (business-specific)</li> <li>Handing out materials (Dry-Weather Field Screening<br/>and Industrial Inspection Program)</li> <li>Hosting workshops</li> </ul>   |

| Social Media Audience                                     | Develop stormwater specific posts for MWS's Facebook,<br>Instagram, Twitter, and NextDoor   |

# Table 3 - Educational Delivery Methods For Each Targeted Audience Group

# 4.0 Education Implementation Schedule:

PIE Plan implementation will be based, first and foremost, on MS4 Permit deadlines. In order to keep track of stormwater education deadlines and responsibilities, a Public Education Implementation Table has been developed that will be the blueprint for yearly public education activities. The Public Education Implementation Table incorporates at least one type of education activity geared toward each Targeted Audience Group.

| Table 4 – Public Education Implementation Examples |  |                      |  |  |  |  |  |  |  |
|--|--|----------------------|--|--|--|--|--|--|--|
| Task   | Activity   | Frequency            |  |  |  |  |  |  |  |
| 1.   | Give out stormwater educational materials at every pre-            | Annually             |  |  |  |  |  |  |  |
|  | construction meeting for Grading Permits.                          |                      |  |  |  |  |  |  |  |
| 2.   | Present at all TDEC Level 1 EPSC workshops in Nashville.           | As Scheduled by TDEC |  |  |  |  |  |  |  |
| 3.   | Perform in-person training or provide maintenance personnel with   | As Deemed Necessary  |  |  |  |  |  |  |  |
|  | stormwater educational materials.                                  |                      |  |  |  |  |  |  |  |
| 4.   | Send mail-outs, perform outbound calling, or post to NextDoor in   | As Deemed Necessary  |  |  |  |  |  |  |  |
|  | high complaint zones as determined necessary.                      |                      |  |  |  |  |  |  |  |
| 5.   | Perform dry-weather field screening on businesses with increased   | Routinely            |  |  |  |  |  |  |  |
|  | potential for stormwater pollution runoff.                         |                      |  |  |  |  |  |  |  |
| 6.   | Send Notice of Inspections to property owners after moderate to    | As Deemed Necessary  |  |  |  |  |  |  |  |
|  | major maintenance issues are found during MWS Stormwater           |                      |  |  |  |  |  |  |  |
|  | inspections.   |                      |  |  |  |  |  |  |  |
| 7.   | Make updates to MWS stormwater website pages to reflect latest     | As Deemed Necessary  |  |  |  |  |  |  |  |
|  | regulations, program updates, new material, etc.                   |                      |  |  |  |  |  |  |  |
| 8.   | Host TN Smart Yards Workshops in-person or virtually.              | Monthly/Quarterly    |  |  |  |  |  |  |  |
| 9.   | Participate in or host at least 6 large community/civic events.    | Annually             |  |  |  |  |  |  |  |
| 10.  | Provide public notice for all large Metro construction projects    | Annually             |  |  |  |  |  |  |  |
|  | (website postings).  |                      |  |  |  |  |  |  |  |
| 11.  | Host an industrial stormwater workshop for all current TMSP sites  | Every Permit Cycle   |  |  |  |  |  |  |  |
|  | and provide recording when necessary.                              |                      |  |  |  |  |  |  |  |
| 12.  | Provide opportunity for public participation/involvement for       | Annually             |  |  |  |  |  |  |  |
|  | stormwater awareness projects (i.e., adopt a stream program, tree  | -                    |  |  |  |  |  |  |  |
|  | plantings)   |                      |  |  |  |  |  |  |  |
| 13.  | Post to social media routinely about stormwater pollutant          | Routinely            |  |  |  |  |  |  |  |
|  | concerns, public education opportunities, and any other updates on | -                    |  |  |  |  |  |  |  |
|  | the program.   |                      |  |  |  |  |  |  |  |
| 14.  | Presentation and demonstrations focusing on stormwater             | Annually             |  |  |  |  |  |  |  |
|  | education at Metro Nashville Public Schools.                       | -                    |  |  |  |  |  |  |  |
| 15.  | Distribute stormwater educational materials to building permit     | Annually             |  |  |  |  |  |  |  |
|  | applicants for single family homes.                                | 2                    |  |  |  |  |  |  |  |
| 16.  | Present each Annual Report to a public forum (Website Posting).    | Annually             |  |  |  |  |  |  |  |

### **Table 4 – Public Education Implementation Examples**

# 5.0 PIE Plan Effectiveness Assessment:

Throughout implementation of the PIE Plan, MWS will attempt to assess the effectiveness of the educational messages. Some potential assessment methods may include performing surveys to certain target audiences during presentations and analyzing monitoring data collected from social media postings.

### 5.1 PIE Database

A Microsoft Access Database has been developed to track and maintain records for each public education opportunity. The database includes the event name, date of event, type and focus of stormwater education, staff involved, and the audience number. The audience number will be based on the number of people who interacted with MWS staff and/or received educational materials rather than the total number of people attending the event. The database will also link to any documentation connected to the event (i.e. presentation, pictures). This tracking will give MWS Stormwater an estimate on audience size for each event and for the public involvement and education effectiveness.

# ATTACHMENT A – Protected Species Report

# Metro Nashville Municipal Separate Storm Sewer System Permit Federal or State-Protected Species Impact assessment

(Reporting Period 07/01/2022 - 06/30/2023)

Reviewed and Updated: October 2023

### Introduction:

As per the Municipal Separate Storm Sewer System (MS4) permit, Metro Nashville is required to perform an annual assessment of potential Stormwater impacts to federal and state-protected aquatic species known to exist within Metro Nashville Davidson County (Metro). In order to perform the assessment, the Metro Water Services (MWS) Stormwater NPDES Section downloaded a list of aquatic species located within Davidson County. In order to assess potential impacts to rare species, the list of rare aquatic species was analyzed and broken into specific habitat categories. Table 1 details the list of rare aquatic species that have been known to occur within Davidson County. According to the Tennessee Department of Conservation (TDEC) Natural Heritage Program (NHP), Rare Species Inventory Program there are 18 aquatic species rare or protected aquatic species that occur or have historically occurred within Davidson County.

Only five of the 18 rare aquatic species have a federal protection status, all of which are listed as "Endangered", while remaining 13 of the rare aquatic species have been listed by the state of Tennessee with one of the following legal protection status:

"D" Deemed in Need of Management,

"E" Endangered,

"T" Threatened,

"S" Special Concern species, and Rare, Not State Listed

# Typical Habitat Requirements:

While the 18 species may require specific aquatic habitat conditions, the general type of aquatic habitat can be broken into three main categories:

- Large River/Lake The Cumberland River is the only large river system within Davidson County. The Cumberland River has portions of two impoundments (Cheatham Lake and Old Hickory Lake) within Davidson County. Due to the dilution factor, Nashville's Stormwater runoff would have negligible effects of the water quality/habitat of the Cumberland River.
- Small Streams to Small/Medium Rivers This particular habitat represents all of the smaller headwater streams, creeks, and small rivers that drain into the Cumberland River. The small streams/rivers are more susceptible to impacts from Stormwater runoff from the MS4.
- Ponds/Wetlands/Springs This particular habitat describes floodplain wetlands, farm ponds, and springheads located throughout the county, which would have the potential of being impacted by MS4 runoff.

# Table 1 – List of Rare Aquatic Species for Davidson County Tennessee – FY22

## Potential Impacts from MS4 Runoff:

Rare species that inhabit smaller streams and rivers, ponds, wetlands, and springs would be the most vulnerable to potential impacts from MS4 runoff. Impacts from MS4 runoff includes:

- Increased sediment loads smothering natural stream substrate;
- Increased nutrient runoff that cause sporadic algal blooms and accompanying reductions in available oxygen;
- Increased levels of toxic chemicals such as pesticides, oils, etc.;
- General loss of habitat from development activities.

### Metro Nashville's Measures to Prevent Impacts to Aquatic Rare Species:

Metro Nashville's MS4 program employs a simple technique to protect against impacts to rare aquatic species: *"Protect all of Nashville's Aquatic Habitat"*. In order to protect Nashville's aquatic habitat, a multi-prong approach is in place:

- Control Future Development Establish local regulations that prevent future development from destroying aquatic habitat. Monitor runoff during construction to prevent the destruction of aquatic habitat
- Enforce on developments that violate local construction regulations that could lead to the further destruction of aquatic resources.
- Control the quality of Stormwater runoff from existing properties
- Establish local regulations that prevent the discharging of pollutants to MS4 and/or waterways
- Monitor existing properties to ensure pollutants are not being discharged to the MS4 and/or waterways.
- Enforce on properties/individuals that violate local water pollution laws that could potentially impact aquatic habitat.
- Monitor the overall water quality and health of Nashville's streams
- Analytical sampling of certain water quality parameters
- Rotating biological surveys of Davidson County streams.

### Controlling Future Development

Metro Nashville has established strict regulations protecting aquatic resources from impacts associated with development activities. All development or redevelopment activities that are over 10,000 square feet in overall footprint or involve more than 100 cubic yards of fill are required to obtain grading permits from the Metro Water Services (MWS) Stormwater Division. In order to obtain a grading permit from MWS, engineered plans have to be developed that illustrate how Stormwater runoff will be managed during and after development. Strict erosion and sediment control measures are required at all grading permit properties during construction. In order to ensure that erosion and sediment controls are maintained throughout construction, NPDES has eleven inspectors that inspect grading permit site construction control measures.

Metro Nashville also requires protection from impacts to aquatic resources after the construction phase of projects by requiring grading permit properties to install permanent Stormwater treatment measures that are designed to treat/address both the volume and quality of runoff from the property.

In addition to requiring development or redevelopment activities to obtain permits and treat Stormwater runoff, Metro Nashville was also one of the first municipalities in the state to establish no-disturb buffers along streams and other water resources within Metro Nashville, Davidson County. Development activities that demonstrate a hardship requiring some impacts to the no-disturb riparian buffer (i.e., for a bridge crossing, etc.) are required to go through a strict variance appeal process via the Metro Stormwater Management Committee. Variance requests for stream crossings or other direct impacts to water resources are not granted unless any necessary TDEC Aquatic Resource Alteration Permits (ARAPs) or Section 404 permits from the U.S. Army Corps of Engineers (USACOE) are obtained, which cannot be issued if protected species are impacted.

Controlling the Quality of Stormwater Runoff from Existing Properties

Metro Nashville has the following specific ordinance in place that prevents the discharge of pollutants to storm drains or community waters:

15.64.205 - Non-Stormwater discharges.

A. Definitions.

"Community waters" means any and all rivers, streams, creeks, branches, lakes, reservoirs, ponds, drainage systems, springs, wetland, wells and other bodies of surface or subsurface water, natural or artificial, lying within or forming a part of the boundaries of the Metropolitan Government of Nashville and Davidson County.

"Contaminant" means any physical, chemical, biological or radiological substance or matter.

"Director" means the Director of the Metropolitan Government of Nashville and Davidson County's Department of Water and Sewerage Services, or his designee.

"Discharge" means any substance disposed, deposited, spilled, poured, injected, seeped, dumped, leaked, or placed by any means, intentionally or unintentionally, into community waters, the waters of the state, or any area draining directly or indirectly into the municipal Stormwater system of the metropolitan government.

"Metropolitan government" means the Metropolitan Government of Nashville and Davidson County.

"Municipal separate storm sewer system of the metropolitan government" means a conveyance, or system of conveyances (including roads with drainage systems, municipal streets, catch basins, curbs, gutters, ditches, man-made channels, and storm drains) designed or used for collecting or conveying Stormwater; provided, however, that sanitary and combined sewers are not included in the definition of the municipal separate storm sewer system.

"Non-Stormwater discharge" means any discharge to the municipal separate storm sewer system except as permitted by subsection C of this section.

"Waters of the state" means any water, surface or underground, lying within or forming a part of the boundaries of the Metropolitan Government of Nashville and Davidson County, over which the Tennessee Department of Environment and Conservation exercises primary control with respect to Stormwater permits.

B. Except as hereinafter provided, all non-Stormwater discharges into community waters, into the waters of the state, or into the municipal separate storm sewer system of the metropolitan government are prohibited and are declared to be unlawful.

C. Unless the director has identified them as a source of contaminants to community waters, the waters of the state, or the municipal separate storm sewer system of the metropolitan government, the following discharges are permitted:

- 1. Stormwater as defined in TCA Section 68-221-1102(5);
- 2. Water line flushing;
- 3. Landscape irrigation;
- 4. Diverted stream flows;

5. Rising ground waters;

6. Uncontaminated groundwater infiltration (as defined at 40 CFR 35.2005(20)) to separate storm sewers;

- 7. Uncontaminated pumped groundwater;
- 8. Discharges from potable water sources;
- 9. Foundation drains;
- 10. Air conditioning condensate;
- 11. Irrigation water;
- 12. Springs;
- 13. Water from crawl space pumps;
- 14. Footing drains;
- 15. Lawn watering;
- 16. Individual residential car washing;
- 17. Flows from riparian habitats and wetlands;
- 18. Dechlorinated swimming pool discharges;
- 19. Street wash waters resulting from normal street cleaning operations;
- 20. Discharges or flows from emergency firefighting activities.

D. The director, with the approval of the mayor, shall have authority to implement this section by appropriate regulations. Such regulations may include but are not limited to provisions for inspection of points of origin of known or suspected non-permitted discharges by appropriate personnel of the metropolitan government.

E. Discharges pursuant to a valid and effective NPDES permit issued by the State of Tennessee are not prohibited by this section.

F. The provisions of this section, including subsection C of this section, shall not apply to sanitary or combined sewers, which are governed by Chapter 15.40 of the Metropolitan Code of Laws.

G. Violation of this section shall subject the violator to a civil penalty of not less than fifty dollars nor more than five thousand dollars per day for each day of violation. Each day of violation may constitute a separate violation.

NPDES issues enforcement notices and administrative penalties to existing facilities found to be in violation of the above non-Stormwater discharge code.

In addition to controlling polluted runoff from construction activity, NPDES implements various other pollution prevention programs:

- Industrial Inspection/Monitoring Program
- Proactive Field Screening/Illicit Discharge Detection Elimination Program
- Pollution Reporting Hotline
- Sewer Leak Detection Program (Using Thermography Technology)
- Post-Construction Stormwater Treatment BMP inspection/maintenance verification program
- Public Involvement/Education

#### Monitoring the Overall Water Quality and Health of Nashville's Streams

NPDES performs intense monitoring of Metro Nashville, Davidson County streams. Veronica Logue of the NPDES Division retained a permit/certification from the USFWS/TWRA to perform surveys within the Mill Creek watershed (home to the endangered Nashville Crayfish). The following programs involve field assessments of streams:

- Ambient Sampling Seasonal water quality samples are taken and analyzed for potential pollutants. Various streams are sampled each year on a rotating basis.
- TMDL Monitoring Quarterly flow weighted samples are collected and analyzed for bacterial and TSS of various/rotating stream segments in which TMDLs have been developed.
- Visual Stream Assessments All State-listed 303(d) stream segments with MS4 outfalls are visually inspected on a 5-year cycle.
- Benthic Surveys Seasonal benthic surveys are performed on various streams each year. The benthic sampling coincides with the same stream rotation schedule as the ambient sampling.

If abnormalities are found in any of the above monitoring results, individual investigations are initiated to find and eliminate potential sources of pollution.

#### Conclusion:

Metro Nashville's MS4 program has taken substantial steps to protect aquatic resources within Metro Nashville, Davidson County. By virtue of protecting the Nashville's water resources, critical habitat required for aquatic species has also been preserved/ protected. During this permit year, there have not been any known discharges from the MS4 that have caused the destruction of a rare species or their critical habitat.

# <u>ATTACHMENT B – Coordination with TDEC on MS4</u> <u>Compliance During Administrative Extension Period of MS4</u> <u>Permit</u>

FY23 Annual Report (Page 133)

January 31, 2017

Re: Nashville Phase 1 MS4 Permit Reissuance - TNS068047

Vojin Janjic | Manager, Water-Based Systems Division of Water Resources William R. Snodgrass Tennessee Tower, 11th Floor 312 Rosa L. Parks Ave, Nashville, TN 37243

Dear Mr. Janjic,

We are writing you to request specific clarification on the permit reissuance process for the Metropolitan Government of Nashville, Davidson County (Metro) Municipal Separate Storm Sewer System, which expires as of today, January 31, 2017. As we approach this reissuance process and period between expired permit and reissued permit, it is our intentions to propose the following path going forward to ensure MS4 Permit compliance is maintained throughout the transition period and to ensure coordination occurs between the Division and key Metro staff to incorporate changes to specific terms and conditions of the MS4 permit.

#### **Transition Period**:

As you are aware, most of the specific requirements of the MS4 permit are ongoing and do not have certain deadlines by which to be completed. Among these, include programs such as administering stormwater management regulations requirements for post-construction stormwater controls, overseeing a vigorous inspection and oversight program for construction activities, performing public education/public involvement activities, ensuring municipal maintenance operations are not impacting stormwater runoff, and implementation of various Illicit Discharged Detection and Elimination (IDDE) programs. Metro proposes to continue these ongoing programs as prescribed in the existing active permit until the new permit becomes effective.

> f 👗 :d assistance or an accommodation, please contact Metro Water Services, -862-4862, 1600 Second Avenue North, Nashville, Tennessee 37208.

There are some MS4 permit requirements, however, that list specific target dates or timeframes for the activities to be completed per Metro's active permit. Specific requirements within the MS4 permit that have declared deadlines are listed below:

- Dry Weather Outfall Screening
  - Screen one outfall within every ¼ mile commercial/industrial grid once per permit term.
- Industrial Inspection/Monitoring Program
  - Inspect industrial high risk sites as identified by the MS4 permit (i.e. SARA Title 3, TSD sites, etc.) once every 3 years.
- Post Construction Stormwater Control Measure (SCM) Inspection and Maintenance Oversight Program
  - o Implement permittee-defined program by the end of year 5.
- Various MS4 Permit-Prescribed Monitoring Activities.
  - Sampling programs (i.e. wet weather, ambient, visual stream assessments, etc.) prescribed in the permit to be completed on a 5 year permit term.

It is our understanding through conversations with TDEC staff, that it may be late 2017 or possibly even next year, before our MS4 permit is reissued. With that said, we would like to propose the following compliance activities to be performed in the transition period.

- Dry Weather Outfall Screening
  - Test our newly proposed field screening protocol (i.e. screen 3 business/industrial sites for site management/housekeeping procedures in each ¼ commercial/industrial-zoned grid.) Transition period goal would be to screen at least 50 grids each year prior to the new permit being issued.
- Industrial Inspection/Monitoring Program
  - Re-inspect only industrial sites in which issues were noted during the original inspections and/or those involved with compliant investigations. Identify and perform inspections on industrial facilities (not required to be inspected by the original MS4 permit (i.e. auto salvage lots, ready-mix facilities, etc. not identified as SARA Title 3 or TSD facilities)). A list of industrial facilities to be inspected would be sent to the TDEC Nashville Field Office. Goal would be to inspect 10 industrial facilities each year.
- Post Construction Stormwater Control Measure (SCM) Inspection and Maintenance Oversight Program
  - Continue to respond to citizen complaints of SCM structures not being maintained properly. In addition, would inspect and enforce (if necessary) on at least 50 SCM structures per year. Currently and during the transition period, Metro will continue to build its SCM Inspection & Maintenance oversight process.
- Various MS4 Permit-Prescribed Monitoring Activities.
  - Discontinue the following sampling activities until the new MS4 permit is issued:
    - Wet Weather Homogenous Land Use Sampling
    - Wet Weather SCM Discharge Grab Sampling
    - Wet Weather Industrial Sampling (1 TMSP/RMCP site per year).

o Continue routine ambient monitoring/sampling programs (ambient chemical/bacteriological sampling and visual stream assessments) as well as any site-specific sampling as required in the course of routine investigations. The MWS Stormwater NPDES Watershed Group would coordinate with TDEC Nashville Field Office staff on monitoring schedules (which watersheds they will be monitoring during the transition period).

#### New Permit Coordination

As stated above, Metro is requesting coordination on developing specific terms and conditions of the reissued MS4 permit in an ongoing effort to improve our permit compliance activities. In particular there are several program activities that Metro is interested in modifying to make more efficient and effective. Some of these proposed changes would involve changes to MS4 permit requirements as well, if implemented. Specific changes Metro are requesting to individually listed permit requirements were included in Metro's most recent Annual Report submittal (see attachment). Metro is requesting specific meetings to be arranged between appropriate TDEC permit writer staff and MWS Stormwater NPDES personnel so that these proposed changes can be explored and discussed.

Sincerely. Muhaon

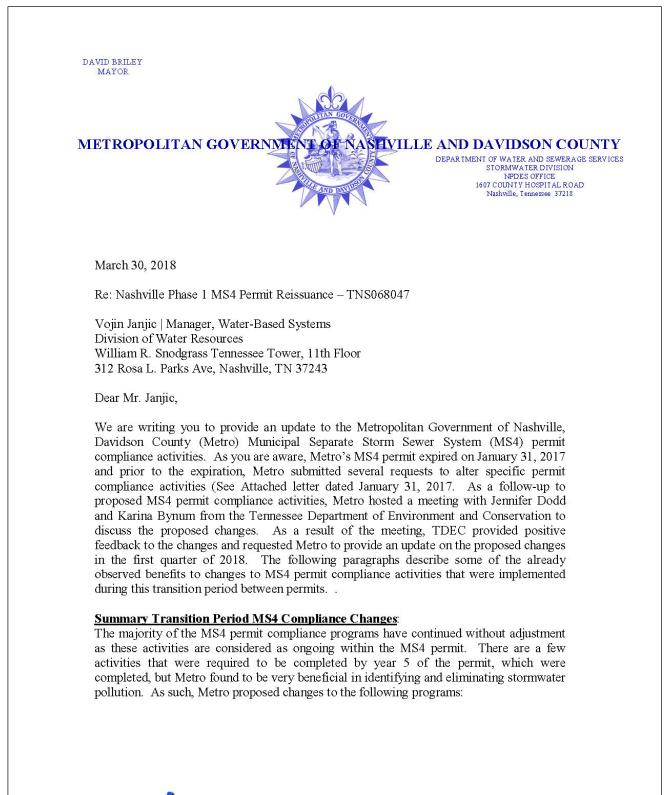

Michael Hunt Metro Water Services, Stormwater, NPDES Program Manager

FY23 Annual Report (Page 137)

#### Dry Weather Outfall Screening

Previous MS4 Permit Requirements

• Screen one outfall within every 1/4 mile commercial/industrial grid once per permit term.

New More Efficient Proposed Field Screening Program

- Screen 3 business/industrial sites for site management/housekeeping procedures in each ¼ commercial/industrial-zoned grid.) Transition period goal would be to screen at least 50 grids each year prior to the new permit being issued.
   Initial Findings:
- This process has proven to be much more effective than looking specifically at outfalls. In the few months of testing, several poor site management practices have been found such as improper management of dumpster pads and grease recycling bins. This has allowed Metro to be more effective and proactive in talking with these businesses to educate them on proper site management issues to prevent these exposed materials from washing off to the MS4 during a rain event. It is important to note that while we are looking at business practices within grids, we still spot check stormwater infrastructure to see if there is any suspicious dry weather, potentially "illicit discharge" flow.
- Adjustments Made to New Approach
- The only adjustment made was going from screening 3 businesses within a <sup>1</sup>/<sub>4</sub> mile grid to screening 3 businesses within a <sup>1</sup>/<sub>2</sub> mile grid. Upon implementing, we quickly realized that <sup>1</sup>/<sub>4</sub> mile grids were too limiting and in many cases did not encompass multiple parcels that could be screened.

#### Industrial Inspection/Monitoring Program

Previous MS4 Permit Requirements

- Inspect industrial high risk sites as identified by the MS4 permit (i.e. SARA Title 3, TSD sites, etc.) once every 3 years.
- New More Efficient Proposed Industrial Inspectino Program
- Re-inspect only industrial sites in which issues were noted during the original inspections and/or those involved with compliant investigations. Identify and perform inspections on industrial facilities (not required to be inspected by the original MS4 permit (i.e. auto salvage lots, ready-mix facilities, etc. not identified as SARA Title 3 or TSD facilities)). A list of industrial facilities to be inspected would be sent to the TDEC Nashville Field Office. Goal would be to inspect 10 industrial facilities each year.

#### Initial Findings:

• This process has proven to be much more effective as we have been able, during this transition period, to focus resources on industrial activities that have the highest potential for stormwater pollution such as Ready Mix Concrete facilities, chrome-plating facilities, etc. This new approach has allowed us to prioritize inspections and coordinate with TDEC field office staff as needed to perform co-inspections.

æ

Adjustments Made to New Approach
There are no proposed refinements to the new approach.

• Post Construction Stormwater Control Measure (SCM) Inspection and Maintenance Oversight Program

Previous MS4 Permit Requirements

• Implement permittee-defined program by the end of year 5.

New More Efficient Proposed SCM Inspection and Maintenance Oversight Program

• Continue to respond to citizen complaints of SCM structures not being maintained properly. In addition, would inspect and enforce (if necessary) on at least 50 SCM structures per year. Currently and during the transition period, Metro will continue to build its SCM Inspection & Maintenance oversight process.

#### Initial Findings:

• Metros NPDES program has vastly expanded resources dedicated to ensuring post construction SCMs are being properly inspected and maintained. As it currently stands, Metro inspects an average of 75 SCM structures each month, which is well above the pace that we originally proposed. This new approach of focusing on NPDES program inspection findings and following-up with property owners on the proper maintenance has proven very beneficial to achieving maintenance on Post-Construction SCMs.

Adjustments Made to New Approach

• Metro is constantly evaluating the inspection and report documentation process and will continue to adjust the program, as necessary, to achieve the highest efficiency to ensure post-construction SCM structures are maintained properly.

#### • Various MS4 Permit-Prescribed Monitoring Activities.

Previous MS4 Permit Monitoring Requirements

- Sampling programs (i.e. wet weather, ambient, visual stream assessments, etc.) prescribed in the permit to be completed on a 5 year permit term.
- New More Efficient Proposed MS4 Permit Monitoring Program
- Discontinue the following sampling activities until the new MS4 permit is issued:
  - Wet Weather Homogenous Land Use Sampling
    - Wet Weather SCM Discharge Grab Sampling
  - Wet Weather Industrial Sampling (1 TMSP/RMCP site per year).
  - o Continue routine ambient monitoring/sampling programs (ambient chemical/bacteriological sampling and visual stream assessments) as well as any site-specific sampling as required in the course of routine investigations. The MWS Stormwater NPDES Watershed Group would coordinate with TDEC Nashville Field Office staff on monitoring schedules (which watersheds they will be monitoring during the transition period).

#### Initial Findings:

• Elimination of the wet weather monitoring has allowed for more resources to be spent on assessing streams for various impairments. Eight biological assessments have been performed on streams that Metro hadn't previously assessed. This provides a more comprehensive and up to date watershed assessment countywide and will additionally provide TDEC with more data than they would otherwise be able to collect. In addition to the biological assessment, nutrient samples are collected at the same time.

FY23 Annual Report (Page 139)

- Monitoring of 2 projects has been initiated and a total of 8 samples have been collected. Both of the projects are located on Cathy Jo Branch. One of the projects is a dam removal and the other is a retrofit to a stormwater outfall that reduced sheer flow during storm events. Samples were collected before work began and will continue in order to show the effectiveness of the projects.
- There have been 2 investigations within the past year as a result of our regular monitoring. Both of these investigations concluded that repairs needed to be made to sewers and thus we are preventing long term discharges to nearby streams.

Adjustments Made to New Approach

• There have not been adjustments made to the new approach. Projects are continually being considered for monitoring in order to show project effectiveness.

Metro is requesting specific meetings to be arranged between appropriate TDEC permit writer staff and MWS Stormwater NPDES personnel so that these proposed changes can be explored and discussed.

Sincerely

Michael Hunt Metro Water Services, Stormwater, NPDES Program Manager

Mr. Scott Potter Director of Metro Water Services 1600 2<sup>nd</sup> Avenue North Nashville, TN 37208 <u>Certified Mail Receipt</u> 7014 2870 0001 3600 2906

## RE: Compliance Evaluation Inspection Nashville/Davidson County Municipal Separate Storm Sewer System (MS4) NPDES Permit Tracking Number TNS068047, Davidson County

Dear Mr. Potter:

On May 16, 2018, Karina Bynum, John Leffew and Ann Morbitt with the Division of Water Resources (division) met with Michael Hunt, Rebecca Dohn, Joshua Hayes, Dale Binder, Steve Mishu and Shawn Herman with Metro Water Services to perform a routine Compliance Evaluation Inspection. The inspection included a review of regulatory mechanisms, records, procedures and other documents related to the construction site stormwater runoff control program required under the NPDES Permit TNS068047 for Discharges from the MS4 owned and operated by the Metropolitan Government of Nashville (Metro).

The construction site stormwater runoff control program is well established, the staff is trained and certified, and the program implementation is compliant with the requirements of the NPDES Permit TNS068047. The division greatly appreciates the time and commitment from your staff in their preparation before and participation during the inspection. Their availability and knowledge of the program ensured it was conducted in an efficient manner.

#### **Permit Review**

The NPDES Permit TNS068047 for stormwater discharges from Metro MS4 was issued and became effective on February 1, 2012. The permit expired on January 31, 2018, and has been administratively extended until a new permit is issued.

### **Records Review**

The MS4 permit requires Metro to continue to implement and enforce its existing construction site stormwater runoff control program. The implementation of the following required elements was reviewed:

• Regulatory mechanisms requiring erosion prevention and sediment control for land disturbance greater than one (1) acre or less than one (1) acre if part of a larger common plan

FY23 Annual Report (Page 142)

Mr. Scott Potter NPDES Permit Number TNS068047 May 31, 2018 Page 2 of 2

of development are published in the Volume 1 of the Metro's Stormwater Management Manual.

- An inventory of all construction sites is provided in the City Works tracking system. All active sites are identified as priority sites and pre-construction meetings for all priority sites are held.
- Education of construction site operators is provided during certification classes for Erosion Protection Sediment Control (EPSC) professionals that are held in the Nashville region. Preconstruction meetings for all priority sites assure EPSC Level 1 is held by on-site operators.
- Control of waste materials is addressed in the stormwater management plan and is required in Volume 1 of the *Metro's Stormwater Management Manual* (section 6.10.8).
- Site plan review and approval procedures are coordinated with the plans review group. Qualified staff reviews plans. The review includes approval of the EPSC design and water quality buffers.
- Site inspections are conducted monthly for all priority sites. Enforcement procedures and all required sanctions are identified in the Enforcement Response Plan (Appendix D of the Stormwater Management Plan) and are outlined in the regulatory mechanisms published in the Volume 1 of the *Metro's Stormwater Management Manual*.
- Public input may be provided by phone, web page or public notice announcements.

#### **Construction Site Visit**

Site inspection procedures were evaluated by performing a site visit at the Magnolia Farms Subdivision construction site (TNR241924 and TNR242096). The stormwater program inspector, Shawn Herman, demonstrated a good working knowledge of erosion prevention and sediment control practices, and performed a comprehensive inspection with appropriate documentation and on-site communication.

Again, we would like to thank Mr. Hunt and his staff for the assistance and courtesy extended to us during our inspection. If you have any questions or need additional information, please contact John Leffew at the Nashville Environmental Field Office by email at john.leffew@tn.gov or by telephone at (615) 687-7106, or you may contact me by email at april.grippo@tn.gov or by telephone at 615-687- 7018.

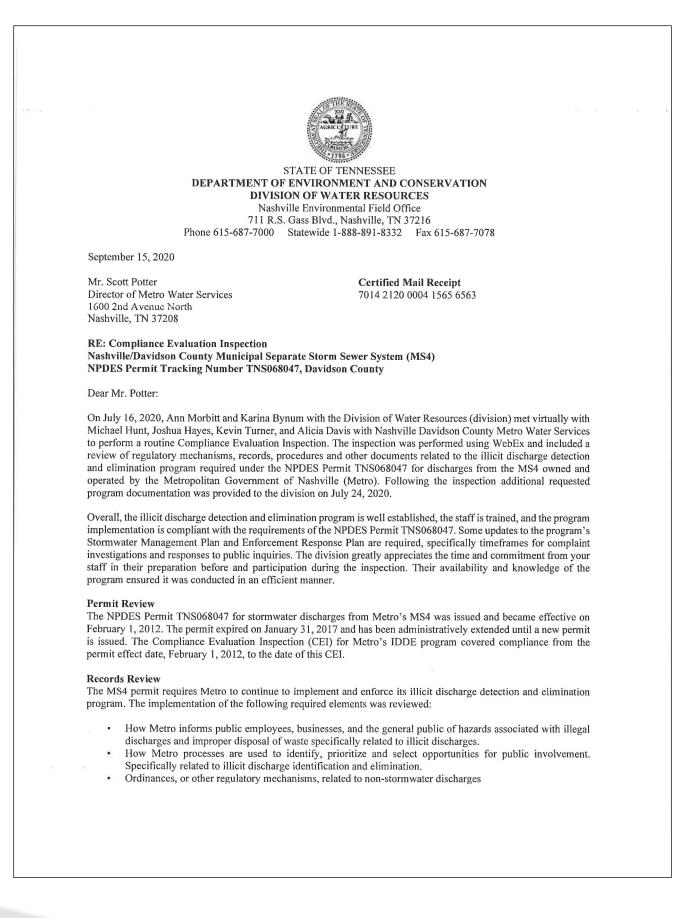

Sincerely,

april Buppo

FY23 Annual Report (Page 145)

## <u>ATTACHMENT C – WIES Database Pollutant Loading</u> <u>Reduction Estimates of SWMP</u>

As required in Section 3.3.2 of the MS4 Permit, Metro is required to develop Event Mean Concentrations (EMC's) for all parameters listed in Table 2 of the MS4 Permit. In year 5 of the MS4 permit, Metro was required to report Seasonal Pollutant Loadings (SPL) from the MS4. The methodology for performing this calculation can be found in the year 5 annual report. In performing this calculation, Metro hired a contractor (Paradigm Environmental) to not only develop the EMC and SPL calculations, but to generate a database that would allow Metro to produce reports on estimated SPLs for each sub-watershed within Metro's jurisdiction on an annual basis. As such, the web-based Davidson County Watershed Improvement Evaluation System (WIES) database was developed which also gives Metro the ability to track stormwater loading reductions achieved through the implementation of Metro Nashville's SWMP. These calculations/estimations are based on structural and non-structural stormwater controls that Metro implements as prescribed by the MS4 permit.

While these calculations are considered to be estimates, our contractor utilized all available documentation from Metro's tracking databases as well as the latest hydrologic modeling programs to refine the estimates as much as possible. For example, stormwater pollutant and volume reduction numbers for structural SCMs were calculated utilizing Loading Simulation Program – C+ (LPSC) and System for Urban Stormwater Treatment Analysis and Integration (SUSTAIN) modelling programs, which take into account varying land uses and mapped soil types for each watershed and the pollutant and performance efficiencies of each type of SCMs. The modeling for SCMs even considers the effects underdrains have on bioretention basins as far as how much runoff reduction is accomplished.

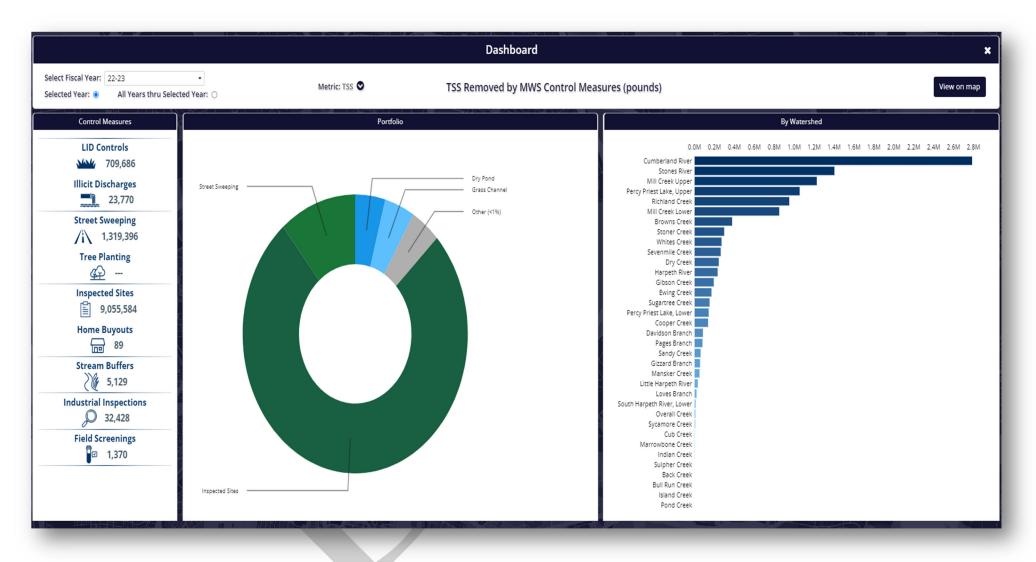

Metro expends many resources implementing non-structural stormwater control measures of the SWMP, such as the IDDE complaint response program, construction inspections and oversight, FEMA home buyout program, street sweeping program, etc. While we know these non-structural programs have been extremely beneficial in improving the quality of water resources within Metro Nashville/Davidson County over time, it has proven difficult to quantify the loading reductions of these non-structural controls. WIES tracks pollution reduction efforts of these non-structural programs by importing data from various Metro databases that track items such as number of construction sites inspected, number of water quality/construction complaint investigations, number of FEMA floodplain buyout properties, etc. In some of these programs, assumptions are applied so loading reduction can best be effectively calculated. The tables within this section depict the calculated SPLs per each sub-watershed and the estimated loading reduction efforts of the SWMP over the last permit reporting period (fiscal year). Please note that importing data into WIES is somewhat dependent on geo-location information available within Metro's databases, which is the source of the data. Due to this, there may be a small discrepancy in numbers between WIES and the actual Metro documentation databases when some data is unable to be imported into WIES. For example, not all of the tree planting numbers could be imported into WIES due to lack of some geolocation data available from the Metro database. Also, the illicit discharge calculations take into account all water quality complaint responses involving either general pollution concerns, grading without permit

FY23 Annual Report (Page 146)

concerns, or spill responses in which NPDES controlled/prevented material from draining to the MS4 such as sediment from non-permitted construction activities, spill response coordination, and general water quality complaint responses.

In addition to the annual reporting tables, Metro is able to generate dashboard views on various SWMP loading reductions, WIES also gives stormwater managers the ability to review the pollution and runoff reduction effects of individual structural SCMs through a dashboard view of a variety of different parameters (depicted in the following pages).

Note: SCMs include regulatory SCMS installed per grading permit and proactive SCMs installed or facilitated by MWS.

Not all MS4 Program Elements transferred to the WIES database for pollutant loading calculations, as program elements with invalid X,Y coordinates could not be imported into WIES for calculation purposes. Construction sites inspected includes Grading Permits and Single Family Infill permits.

While stream buffers have been protected since the late 1990s, MWS only started mapping the Buffers for WIES calculations in FY21
